2009 Standard Catalog of®

FIREARMS

19TH EDITION

DAN SHIDELER

Front Cover Photo

Long neglected by collectors, Colt's Scout family of .22 rimfire revolvers is now riding high on a wave of 1960s nostalgia. See our 16-page color spread starting on page 769 for more information on these fascinating Colts from the Bruce Buckner, Jr., collection!

ACKNOWLEDGMENTS

Standard Catalog of Firearms owes much of its success to many noteworthy contributors, past and present:

Jim Schlender, noted outdoors writer and editor of *Turkey & Turkey Hunting Magazine*, for his work on assembling new shotgun data.

Fred Baumann for his painstaking compilation of our "Value Tracker" sidebars.

Joseph M. Cornell, editor of *Standard Catalog of Winchester Firearms* and proprietor of Accredited Appraisal Services (303-455-1717) for his insights on Colt and Winchester pricing as well as "sleepers."

Tom Caceci of Blacksburg, VA, for his insights on blackpowder revolvers and humane cattle killers.

Jim Stark of Gilbert, SC, for his invaluable review of Remington's "Nylon 66" family of rimfire rifles.

LCDR James Dodd, USN (ret.), for his contributions on Scout rifles and the recent goings-on at Remington.

David Rachwal of Hilliard, OH, for his expertise concerning the elusive MBA Gyrojet.

Robert Hausmann of Barre, VT (www.swiss-guncollectors.com), for his insights on SIGARMS and Swedish weapons in general.

Orvel Reichert is a collector of World War II-era semi-automatic pistols, especially the P38, and has been an invaluable help in sorting out a sometimes-confusing array of pistol variations. He can be reached at P. O. Box 67, Vader, WA 98593, 360-245-3492, email address: mr.p38@localaccess.com.

Bailey Brower, Jr. should be recognized for his knowledgeable input on Remington and Savage auto pistols. Bailey can be reached at P.O. Box 111, Madison, NJ 07940.

David Moore of William Larkin Moore & Co. provided expert information on B. Rizzine, Garbi, F. Rizzine, Piotti, and Lebeau Courally. He can be reached at 8340 E. Raintree Dr. Suite B-7, Scottsdale, AZ, 85260. Phone 480-951- 8913.

The editor would like to acknowledge the kind permision of **Mrs. Gereldene Brophy,** wife of the late **Col. William S. Brophy**, to use her late husband's photos from his outstanding book, *Marlin Firearms*.

John Dougan, Ruger expert, who supplied us with information on the Great Western Arms Co.

Dave Banducci is extremely knowledgelable on Browning High-Power bolt action rifles in all grades. He is a great source for pricing and variations on these complex rifles. He can be reached at 720-272-9914.

Burt O'Neill is an experienced collector of Browning "P" Grades and helped with that pricing. He can be reached at 610-793-3256.

Thanks to Smith & Wesson expert **Roy Jinks**, of Smith & Wesson, who wrote the introduction to that section in this book.

Bud Bugni of Sutter Creek, CA (209-267-5402) for his expertise on the Winchester Model 42.

C.W. Slagle, of Scottsdale, Arizona, for his expertise in antique firearms.

A special thanks to **Simeon Stoddard**, former curator of the Cody Firearms Museum, for his research and contribution on the M-1 Garand rifle.

A special thanks to all the manufacturers and importers who supplied us with information on, and photographs of, their products.

Thanks to the **Lew Horton Distributing Company** for its valuable information on Colt Custom Shop products and Smith & Wesson Performance Center products.

Thanks to **Jerry Cummings** of Manawa, Wisconsin, and **William "Pete" Harvey** of Falmouth, Massachusetts, who contributed photos and research information.

Many thanks to **Harold Hamilton** of Hershey, Pennsylvania, for his invaluable assistance with Hamilton rifles.

Michael McIntosh gave generously of his expert knowledge of A.H. Fox Company and its guns.

Ed Buehlman, a longtime firearms dealer, shared his knowledge of Colt New Frontier models. He can be reached at 847-381-2276.

Special appreciation to **Joe McBride** of McBride's Guns in Austin, Texas, for his expert assistance.

Walter C. Snyder is the "Chronicler of the Ithaca Gun Company" and has devoted a great deal of time and effort to making the Ithaca section the most comprehensive of any price guide on the market.

Tom Turpin is a big help with his invaluable knowledge of F.W. Heym Company and its product line, as well as other European rifles and shotguns.

Horst Held of Midlothian, Texas, provided us with information on interesting and seldom seen antique semi-automatic pistols.

Ted Willems and **Bruce Wolberg** of *Gun List* have been most helpful with information and locating hard-to-find firearms.

We also want to thank the members of the **Ruger Collectors' Association** for their invaluable input.

And a big thank-you to **Summer Sellers** of Goshen, Indiana, for providing such excellent transcriptions of a few of my previously-published pieces. Thanks, Summer!

Thanks to all the readers who have taken the time to contact the editor with corrections, omissions and additional information.

PHOTO CREDITS

Thanks to the **Milwaukee Public Museum**, 800 W. Wells St., Milwaukee, WI 53233; and the **Buffalo Bill Historical Center**, Cody Firearms Museum, P.O. Box 1000, Cody, WY 82414, for supplying us with photographs. We also wish to thank the **Remington Arms Company** for its kind assistance in providing us with photos of out-of-production Remington firearms.

Many thanks to the following who loaned us their firearms to photograph for this book:

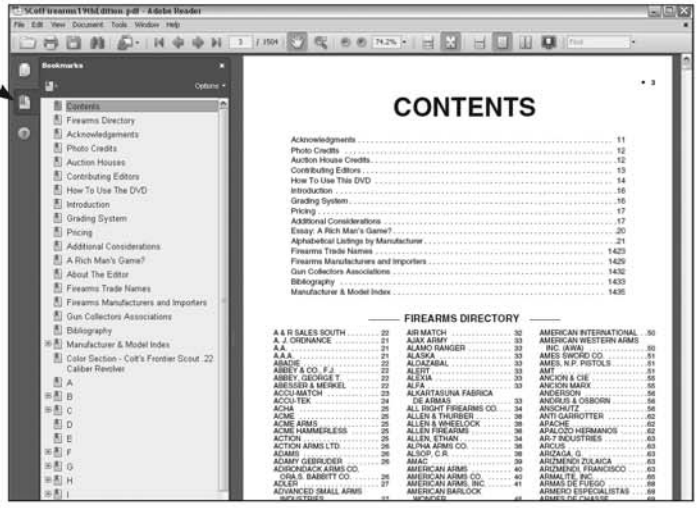
HOW TO USE THE CD

This CD is PC and Macintosh® compatible when used with Adobe Acrobat Reader® version 6.0 or later. A step-by-step free download of Adobe Acrobat Reader® 8 is available at www.adobe.com. Adobe Reader® 8 was used in creating the instructions that follow.

To help you successfully navigate through the PDF document, several types of searches are available.

USING BOOKMARKS

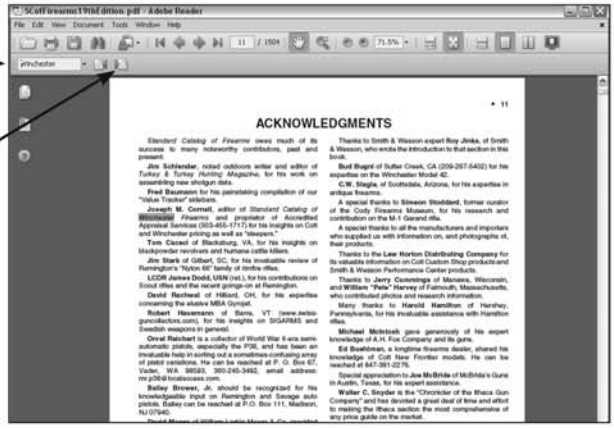
Click on the Bookmarks icon to open the Bookmarks window. Use these links to go to specific points of interest. To scroll through pages in each section, use the arrows at the top of the screen (see next page for instructions to find page navigators).



USING THE FIND BOX

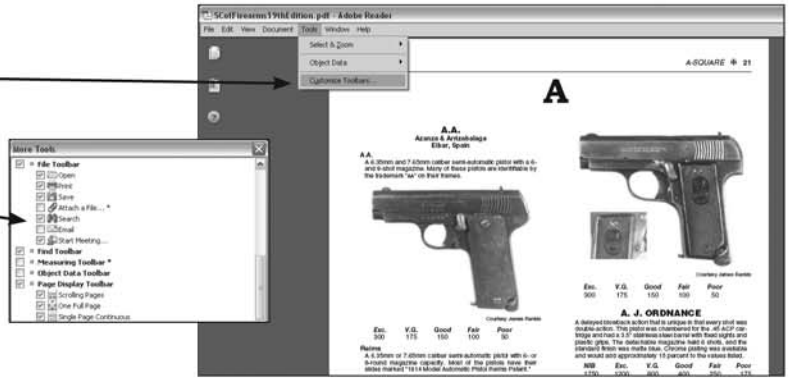
Locate the find box in the tool bar and enter the word(s) you are searching for.

To navigate through the results of your search, use the Find Next icon.



USING THE SEARCH OPTION

Locate the Search button by choosing Customize Toolbars in the Tools pull-down menu. Check Search (binocular icon) to have the Search option available in the toolbar.

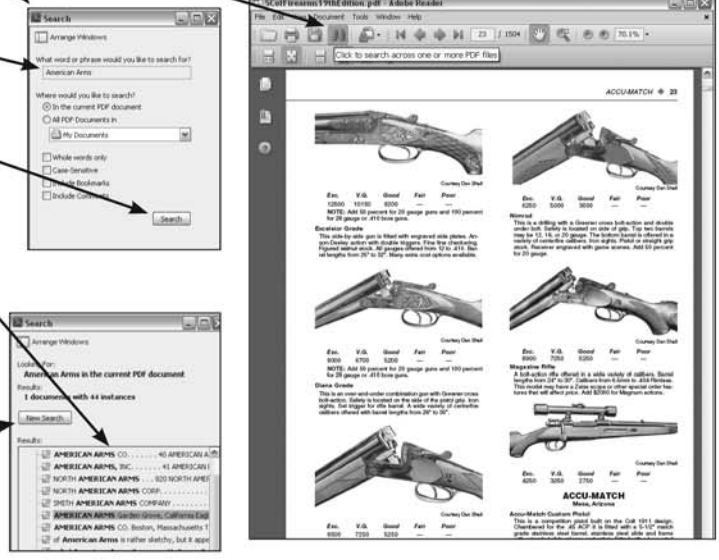


Click on the Search icon to open the Search dialog box.

In the Search dialog box, enter the word(s) you are searching for and click on the Search button.

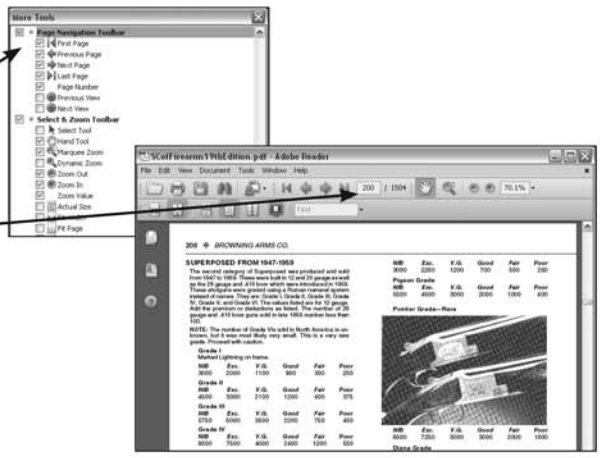
The list of results will appear in the dialog box. Click on the listings to view each page that contains your searched word(s).

To begin a new word search, click on the New Search button.



USING PAGE NAVIGATORS

Activate the Page Navigator Toolbar by choosing Customize Toolbars in the Tools pull-down menu. Check each tool as shown at right. You are now able to page through the PDF document by using the arrows at the top of the screen or by entering a page number you wish to view.



INTRODUCTION

Welcome to the 19th edition of *Standard Catalog of Firearms*. This latest and most comprehensive edition contains new features I hope you find useful.

Compiled by Fred Baumann, our "Value Tracker" sidebars establish historical pricing trends for a variety of collectible firearms. Prices in the "Value Tracker" listings are taken from firearms auction firms that publish printed catalogs as well as printed lists of the prices realized. Descriptive commentary displayed in quotation marks is taken from the original auction description (e.g., "Fine"). Where no general description of condition appears in the auction catalog, one is composed by us to summarize the overall condition of the firearm to the best of our ability based on the description given, shown without quotation marks (e.g., about F-VF). Significant flaws are identified wherever possible, though not every minor flaw may be mentioned. As a rule, the "Value Tracker" records only prices for individual firearms that are in good working order or can be easily made so. Exceptionally valuable firearms (such as presentation-cased guns, multi-barrel sets, or lavishly engraved examples) – as well as non-functional firearms (so-called "parts guns") – are deliberately excluded from the listings to avoid skewing the analysis of values up or down.

Throughout this edition, you will see certain models identified as "sleepers": models that are undergoing, or are likely to undergo, an upward shift in value. These entries are identified by the icon shown at the right. In today's volatile market, however, nothing is certain, so we can make no guarantees as to the future appreciation of any model.

We have also expanded our perspective to take into account the growing effect of the internet in establishing collectible firearms pricing. As far as we can tell, internet websites, local gun shops and traditional auction houses can exist quite well side-by-side, and the overall effect of the internet has been to expand the hobby dramatically. We can all profit from its existence: buyers, sellers and window-shoppers alike.

We've also included a few brief feature pieces dealing with specific guns or collecting trends. We hope you enjoy them. These pieces are part of our recent emphasis on what might be called "second-tier" collectibles, an emphasis we plan to continue.

May your collecting always remain safe and enjoyable. Happy hunting!

Dan Shideler
Editor

GRADING SYSTEM

In the opinion of the editor, all grading systems are subjective. It is our task to offer the collector and dealer a measurement that most closely reflects a general consensus on condition. The system we present seems to come closest to describing a firearm in universal terms. We strongly recommend that the reader acquaint himself with this grading system before attempting to determine the correct price for a particular firearm's condition. Remember, in most cases condition determines price.

NIB—New in Box

This category can sometimes be misleading. It means that the firearm is in its original factory carton with all of the appropriate papers. It also means the firearm is new; that it has not been fired and has no wear. This classification brings a substantial premium for both the collector and shooter.

Excellent

Collector quality firearms in this condition are highly desirable. The firearm must be in at least 98 percent condition with respect to blue wear, stock or grip finish, and bore. The firearm must also be in 100 percent original factory condition without refinishing, repair, alterations or additions of any kind. Sights must be factory original as well. This grading classification includes both modern and antique (manufactured prior to 1898) firearms.

Very Good

Firearms in this category are also sought after both by the collector and shooter. Modern firearms must be in working order and retain approximately 92 percent original metal and wood finish. It must be 100 percent factory original, but may have some small repairs, alterations, or non-factory additions. No refinishing is permitted in this category. Antique firearms must have 80 percent original finish with no repairs.

Good

Modern firearms in this category may not be considered to be as collectable as the previous grades, but antique firearms are considered desirable. Modern firearms must retain at least 80 percent metal and wood finish, but may display evidence of old refinishing. Small repairs, alterations, or non-factory additions are sometimes encountered in this class. Factory replacement parts are permitted. The overall working condition of the firearm must be good as well as safe. The bore may exhibit wear or some corrosion, especially in antique arms. Antique firearms may be included in this category if their metal and wood finish is at least 50 percent original factory finish.

Fair

Firearms in this category should be in satisfactory working order and safe to shoot. The overall metal and wood finish on the modern firearm must be at least 30 percent and antique firearms must have at least some original finish or old re-finish remaining. Repairs, alterations, nonfactory additions, and recent refinishing would all place a firearm in this classification. However, the modern firearm must be in working condition, while the antique firearm may not function. In either case the firearm must be considered safe to fire if in a working state.

Poor

Neither collectors nor shooters are likely to exhibit much interest in firearms in this condition. Modern firearms are likely to retain little metal or wood finish. Pitting and rust will be seen in firearms in this category. Modern firearms may not be in working order and may not be safe to shoot. Repairs and refinishing would be necessary to restore the firearm to safe working order. Antique firearms will have no finish and will not function. In the case of modern firearms their principal value lies in spare parts. On the other hand, antique firearms in this condition may be used as "wall hangers" or as an example of an extremely rare variation or have some kind of historical significance.

Pricing Sample Format

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
2250	1800	1500	1250	1000	700

PRICING

The prices given in this book reflect RETAIL values. This is important. You will generally not realize full retail value if you trade a gun in on another or sell it to a dealer. In this situation, your trade-in gun will be valued at wholesale, which is generally substantially below retail value.

Unfortunately for shooters and collectors, there is no central clearinghouse for firearms prices. The prices given in this book are designed as a guide, not as a quote. This is an important distinction because prices for firearms vary with the time of the year, with geographical location, and sometimes for no apparent reason. For example, interest in firearms is at its lowest point in the summer. People are not as interested in shooting and collecting at this time of the year as they are in playing golf or taking a vacation. Therefore, prices are depressed slightly and guns that may sell quickly during the hunting season or the winter months may not sell well at all during this time of year. Geographical location also plays an important part in pricing. Political pundits are often heard to say that all politics is local. Well, the same can be said, in many ways, for the price of firearms. For instance, a Winchester Model 70 in a .264 caliber will bring a higher price in the Western states than along the Eastern seaboard. Smaller gauges and calibers seem to be more popular along both coasts and mid-sections of the United States than in the more open western sections of the country.

It is not practical to list prices in this book with regard to time of year or location. What is given is a reasonable price based on sales at gun shows, auction houses, *Gun List* prices, and information obtained from knowledgeable collectors and dealers. In certain cases there will be no price indicated under a particular condition but rather the notation "N/A" or the symbol "—." This indicates that there is no known price available for that gun in that condition or the sales for that particular model are so few that a reliable price cannot be given. This will usually be encountered only with very rare guns, with newly introduced firearms, or more likely with antique firearms in those conditions most likely to be encountered. Most antique firearms will be seen in the good, fair and poor categories.

As noted above, throughout this edition you will see certain models identified as "sleepers": models that are undergoing, or are likely to undergo, an upward shift in value. These entries are identified by the icon shown at the right. In today's volatile market, however, nothing is certain, so we can make no guarantees as to the future appreciation of any model.

Note that the prices in this book are a GENERAL GUIDE as to what a willing buyer and willing seller might agree on. So how is the reader to use this book? *Standard Catalog of Firearms* can be used as an identification guide and as a source of starting prices for a planned firearms transaction. If you start by valuing a given firearm according to the values shown in this book, you will not be too far off the mark.

In the final analysis, a firearm is worth only what someone is willing to pay for it. New trends arise quickly, and there are many excellent bargains to be found in today's market. With patience and good judgment – and with this book under your arm – you, too, can find them.

ADDITIONAL CONSIDERATIONS

As stated in the pricing section, this publication offers a general guide to prices. There are many factors that may affect the value of a firearm. We have attempted to be as comprehensive as possible, but we cannot cover all possible factors that may influence the worth of any given firearm. Some of these circumstances will be discussed so that the shooter and collector will have a better idea of how certain factors may affect prices.

Firearms have been admired and coveted, not only for their usefulness, but also for their grace and beauty. Since the beginning of the 19th century, firearms makers have adorned their guns with engraving, fine woods, or special order features that set their products apart from the rest. There is no feasible way to give the collector every possible variation of the firearms presented in this book. However, in a general way, certain special factors will significantly influence the price of a firearm.

Perhaps the most recognizable special feature collectors agree affects the price of a firearm is engraving. The artistry, beauty, and intricate nature of engraving draw all collectors toward it. But, firearms engraving is a field unto itself requiring years of experience to determine proper chronological methods and the ability to identify the engraver in question. Factory engraving generally brings more of a premium than after-market engraving. To be able to determine factory work is a difficult task, full of pitfalls. In some cases, factories like Colt and Winchester may have records to verify original factory engraving work. Whereas other manufacturers such as Parker, Remington, or Savage may not have these records. Whenever a firearm purchase is to be made with respect to an engraved gun, it is in the collector's best interest to secure an expert opinion and/or a factory letter prior to the purchase. Engraved firearms are expensive. A mistake could cost the collector thousands of dollars; proceed with caution.

The 18th century was also a time when pistols and rifles were purchased by or given to historically important individuals. Firearms have also been an important part of significant historical events such as the Battle of the Little Bighorn or the Battle of Bull Run or some other meaningful event in our nation's history. Many of these firearms are in museums where the public can enjoy, see and appreciate them. Others are in private collections that seldom, if ever, are offered for sale. If the collector should ever encounter one of these historically important firearms, it cannot be stressed strongly enough to secure an expert determination as to authenticity. Museum curators are perhaps the best source of information for these types of firearms. As with engraved guns, historical firearms are usually expensive, and without documentation their value is questionable.

Special features and variations are also a desirable part of firearms collecting. As with engraving, special order guns can bring a considerable premium. The Colt factory has excellent records regarding its firearms and will provide the collector with a letter of authenticity. Winchester records are not as comprehensive, but rifles made prior to 1908 may have

documentation. Other firearm manufacturers either do not have records or do not provide the collector with documentation. This leaves the collector in a difficult position. Special order sights, stocks, barrel lengths, calibers, and so forth must be judged on their own merits. As with other factors, an expert should be consulted prior to purchase. Sometimes this can be difficult. Experienced collectors, researchers, and museums will generally provide the kind of information a collector needs before purchasing a special order or unique firearm.

Perhaps the best advice is for the collector to take his time. Do not be in a hurry, and do not allow yourself to be rushed into making a decision. Learn as much as possible about the firearms you are interested in collecting or shooting. Try to keep current with prices through *Gun List* and this publication. Go to gun shows, not just to buy or sell, but to observe and learn. It is also helpful to join a firearms club or association. These groups have older, experienced collectors who are glad to help the beginner or veteran. Firearms collecting is a rewarding hobby. Firearms are part of our nation's history and represent an opportunity to learn more about their role in that American experience. If done skillfully, firearms collecting can be a profitable hobby as well.

A RICH MAN'S GAME?

BY DAN SHIDELER

By the time this edition of *Standard Catalog of Firearms* goes to press, we'll all be paying well over four bucks a gallon for gas – and nearly the same for a gallon of milk. Natural gas and electricity prices are inching up steadily, and basic cable is going through the roof. Come to think of it, the roof needs fixing, too.

In my family, we've had to cut back substantially. We've canceled our summer trip to the Rockies, choosing instead to explore the scenic beauty of rural Elkhart County, Indiana. This doesn't sound so bad until you consider that we already live in rural Elkhart County, Indiana.

I don't wish to call down a jinx on all of us, but it sometimes appears to me that our economy is staggering uncertainly toward recession. Yet most gun prices continue to climb steadily, along with everything except our household income. Where is this leading the gun collecting hobby?

I wish I knew. As editor of this book, I am necessarily interested in the future of the gun hobby. And as far as I can tell – although I hope I'm wrong – it seems to me that there's a 80/20 rule at work here: 80 percent of the collectible guns end up in the hands of the 20 percent of the population who can afford them. And this isn't good for the long-term health of the hobby.

Let me qualify that. I bear absolutely no ill will to those who are so well-heeled that they can afford even the priciest collectible guns. (My own mother had such hopes for me before I went bad.) That's free enterprise and capitalism at work, and I'm a big believer in both. But it does seem to me that the beginning gun collector is necessarily shut out of many areas, and that's a shame.

THE COLLECTING IMPULSE

First, let me explain what I mean by "collector." The true collector is driven by an urge to organize, to categorize, to catalogue. This impulse to nail down every variation of a given subject is what drove the great Golden Age of Collecting in the 1950s. Those were the glory days of stamp collecting, coin collecting, and gun collecting. Fueled by a relatively inexpensive influx of post-war European collectibles – either properly imported or "liberated" – the beginning collector was in clover. Those were the days when kids would patiently snap coins into bound volumes, or spend hours sliding stamps into small glassine envelopes. Far more than merely a time-killing hobby, these activities taught and reinforced the crucial intellectual skills of differentiation and compartmentalization.

Such intellectual activities are on the decline today, if not actually deadsville. I don't notice legions of young collectors patiently sorting stamps, coins or guns – in fact, as far as I can tell, most of the good folks who engage in such pastimes are, shall we say, getting a little long in the tooth, as am I. Publications dealing with stamp and coin collecting seem to be on the decline, and if not actually on the decline, then they're at least suffering from a dearth of fresh blood.

Collecting *per se* is an intellectual pursuit. It involves discipline, patience and insatiable curiosity. We can be thankful that the collecting mentality is alive and well among such groups as the legendary Ohio Gun Collectors Association, for it is these associations that provide the scholarship that allows us to know so much about the guns that pass through our hands.

I might go out on a limb and say that, with the advent of the internet, the majority of the players in today's collectible gun hobby aren't collectors at all, but opportunistic acquirers. These are the people who do not specialize in any one area, but acquire guns either to trade them or sell them at a profit. For these folks, collecting, sorting and categorizing aren't the big driving factors: the hope of a fast turnaround is.

And there's nothing wrong with that, by gum! In fact, the opportunistic acquirers are (mostly) the nice people who buy this book. A serious Winchester collector certainly doesn't need little old me to tell him what his guns are worth, but the fellow who stumbles across a High Standard Sentinel Deluxe or a Great Western Derringer at his neighborhood gun shop might want to know more about it in hopes that a) it might prove to be an interesting find for which he has some use, or b) it might be something he can turn for a fast buck or trade for something even more interesting.

This is definitely where the hobby is heading: we are approaching a point where the nice stuff – the really choice stuff – passes from one serious collector to another, and the remainder of the circulating collectible firearms get snapped up by the opportunistic acquirers. This is not universally true, but it's truer than not.

(I might take a moment at this point and tell you that in setting the values in this book, I do not rely overmuch on value estimates supplied by collectors associations. I strive to assign real-world values to the models included in this book, and that isn't always as simple as it seems. Collectors tend to value the items in their collections according to what they think they *should* be worth, whereas I try to assign the values in this book based upon what most people are willing to pay for them. There's a difference.)

So, with the top-end collectors spending top dollar, and with the opportunistic acquirers constantly on the lookout for easily-liquidated inventory, what is the beginning collector with limited discretionary income to do? Where can he possibly start?

The answer is simple: he must start where the market isn't.

COLLECTING 101

To be truly collectible, a gun (or an inkwell, or a doll, or just about anything else) must have a few important characteristics:

- It must have intrinsic physical or intellectual value. This is why no one bothers to collect driveway gravel.
- It must exist in sufficient variation to warrant classification or categorization, yet these variations must be ultimately finite.
- It must be attainable and affordable, according to the individual collector's standards.

This last point is where the novice firearms collector hits his or her first snag. At a time when even a modest collectible firearm may cost a couple of hundred dollars, "affordable" is a relative term.

But let's say that a beginning gun collector has squirreled away several hundred dollars. Can he start a decent collection with such limited resources? Sure he can – if he goes where the market isn't.

I spend quite a lot of time in the field, attending gun shows, paying visits to my local dealers, attending gun and estate auctions, and monitoring internet auctions. Based on what I've seen in the past few years, a beginning gun collector with a limited budget would be well-advised to consider the following half-dozen classes of collectible firearms. (There are hundreds more, but these are to me among the most promising.)

Mossberg .22s

With but few exceptions, Mossberg .22s haven't caught on as collectibles. Yet a casual scan of the Mossberg section of this book reveals that Mossberg .22s meet each of the three criteria mentioned above. In fact, Mossberg .22s exist in such wonderful profusion that the beginning collector might wish to concentrate on a single type of rifle – the bolt action, say, or the semi-auto. Here in the midwest, most of the great old Mossbergs of the '50s and '60s can be had for less (sometimes much less) than $150 apiece, usually in surprisingly good condition.

And there's even more good news for someone considering starting a Mossberg collection: there's a national collector group, the National Mossberg Collectors Association (www.mossbergcollectors.org) that can provide excellent resources and pointers.

Collecting Mossbergs can be as modest or as involved as one wishes. A simple collection of Mossberg semi-autos can easily expand into true

rarities like the ultra-scarce Mossberg Model L Martini-action rifle or the Brownie pepperbox or the odd little piggybank-shaped Mossberg-Shattuck "Unique" palm pistol.

Remington "5-Series" Bolt Action .22s

We all know them, we all love them: the Remington Model 510, 511, 512, etc. Most of these excellent little rifles can still be found at bargain prices, with a few notable exceptions such as the pricey Model 540X. It's always been a bit of a puzzler to me why 1950s-vintage Remingtons aren't considered as collectible as their Winchester counterparts, but I suspect it's because of the simple fact that Remington never adopted a reputation-killing "streamlining" program in the early '60s, and thus avoided establishing a "pre-'64/post-'64" mindset.

But this is all to the good of the beginning collector, who can have a hell of a good time assembling a collection of these unpretentious Remingtons. As with the Mossberg collector, the Remington collector can also profit from the activities of a dedicated collector group, the Remington Society of America (www.remingtonsociety.com).

Auto-5 Clones

Have you looked around lately to see what Browning Auto-5s are fetching? Belgian, Japanese, it doesn't seem to matter: choice examples are steadily edging upward toward the $1000 mark, with some models selling well in excess of that.

I love Auto-5s. They fit me like no other shotgun does, and though I'm hardly what you would call a master shotgunner, I can generally bring down what I'm shooting at as long as I'm shooting an Auto-5. I'd like to have dozens of Auto-5s, but that's hardly in the cards for me, or for the would-be Auto-5 collector.

I could, however, collect Auto-5 clones: the Remington Model 11s, the Savages, the Stevenses, and even the oddballs like the Japanese Auto Pointer made by Yokohama and marketed under the Charles Daly name. Most of these can be had for around $275 apiece, which is well within the means of the novice collector.

Marlin Model 60 Variants

Marlin used to advertise their Model 60 family as the best-selling .22 autoloaders of all time, with 6,200,000 of them reported sold as of 1997. The Model 60 line began in 1959 with the introduction of the Model 99, a tube-magazine blowback autoloader. The Model 99 morphed into the Glenfield Model 60 and then into the Marlin Model 60, with innumerable models being marked with the name of wholesalers and retailers.

Considering that most Model 60s (and the 99s and the Glenfields) can often be had for under $150 apiece in Excellent condition, these durn-near-foolproof rifles represent a prime opportunity for the beginning collector, as do their box magazine-fed cousins. And, of course, there's always the Marlin Collectors Association (www.marlin-collectors.com) to help the beginner get off on the right foot.

First-Generation Charter Arms Snubbies

If one were interested in beginning a handgun collection, I'd recommend that he or she consider the first-generation (1964 – c. 1986) Charter Arms snubbies. These include the various Bulldogs, Target Bulldogs, Undercovers and Undercoverettes, Pathfinders, and even oddities such as the .38 Bonnie and Clyde matched pair. Charter Arms revolvers from the 1970s and 1980s can be found in NIB (New In Box) condition surprisingly often for under $300. These were considered sturdy, well-made revolvers in their day, and in my opinion they remain eminently collectible.

Mossberg Targos

Believe it or not, there was a time (late 1930s to early 1960s) when shooting miniature clay birds with .22 shotshells appeared to be the coming thing. The sport, which was called "Targo," never really got a foothold, but that didn't stop Mossberg from marketing a complete line of smoothbored Targo .22 rifles and accessories. Although there were relatively few different models of Targo guns, there were numerous Targo accessories including clay birds, throwers (some of which mounted directly on the gun barrel), ranges, and scads of printed literature. Targo prices have been creeping upward lately, but I still run across the guns and accessories (including unopened boxes of targets) with some frequency. The guns themselves generally run under $275, though of course this varies with condition. A complete Targo collection would be an impressive display indeed.

A Final Word

By now you get the idea. If one aspires to be a gun collector, as opposed to an opportunistic acquirer, there are plenty of avenues open to him or her. Gun collecting needn't be a rich man's game, and beginning collectors needn't have to choose between enjoying a fascinating hobby and feeding his family and taking them to the beach every now and then.

And it is to these beginning collectors, present and future, to whom this book is cheerfully and respectfully dedicated.

ABOUT THE EDITOR

A lifelong firearms enthusiast, Dan Shideler is the editor of numerous Krause Publications gun-related titles, including *Modern Gun Values* and *Gun Digest® Book of Guns & Prices*. He has been privileged to work with many of the finest firearms authorities of the day, including Layne Simpson, Patrick Sweeney, Richard Nahas, Jim Supica, John Taffin and Ken Ramage, among others. He is a regular contributor to *Gun Digest® Magazine* and various other publications. He and his wife Karen live in northern Indiana.

A. J. ORDNANCE
A delayed blowback action that is unique in that every shot was double-action. This pistol was chambered for the .45 ACP cartridge and had a 3.5" stainless steel barrel with fixed sights and plastic grips. The detachable magazine held 6 shots, and the standard finish was matte blue. Chrome plating was available and would add approximately 15 percent to the values listed.

ADIRONDACK ARMS CO. or A.S. BABBITT CO.

Plattsburgh, New York

Orvil M. Robinson Patent Rifle

The Robinson tube-fed repeating rifle was made in New York between 1870 and 1874. The early models, 1870-1872, are marked "A.S. Babbitt"; the later models, 1872-1874, "Adirondack Arms Co." The Company was sold to Winchester in 1874,

but they never produced the Robinson after that date. The rifle has been found in two styles: The first with small fingers on the hammer to cock and operate the mechanism; the second with buttons on the receiver to retract the bolt and cock the hammer. The rifle was made in .44 cal. with an octagonal barrel usually found in 26" or 28" length. The frames were predominantly brass; but some iron frames have been noted, and they will bring a premium of approximately 25 percent. The barrel and magazine tube have a blued finish.

ADVANCED SMALL ARMS INDUSTRIES

Solothurn, Switzerland

one Pro .45

Introduced in 1997 and built in Switzerland by ASAI this pistol features a 3" barrel chambered for the .45 ACP cartridge. It is based on a short recoil operation and is available in double-action or double-action-only. Also available is a kit (purchased separately) to convert the pistol to .400 Cor-Bon caliber. The pistol weighs about 24 oz. empty. The conversion kit has a retail price of $209.00.

AFC

Auguste Francotte
Liege, Belgium

This was one of the most prolific makers of revolvers in Liege during the last half of the 19th century. It is estimated that over 150 different revolvers were made and marketed by them before they were forced out of business by the German occupation of 1914. Francotte produced many variations from Tranter copies to pinfires, early Smith & Wesson designs to the 11mm M1871 Swedish troopers revolver. They made break-open revolvers and produced only one semi-auto, a 6.35mm blowback design. A good portion of their pistols were produced for the wholesale market and were sold under other names. These particular revolvers will bear the letters "AF" stamped somewhere on the frame. Because of the vast number and variety of pistols produced by this company, cataloging and pricing is beyond the scope of this or any general reference book. It is suggested that any examples encountered be researched on an individual basis.

For more information on Francotte see the information under that listing.

Model 1895

One of the earliest Francotte pistols. Chambered for the 8mm cartridge, it is a lever-operated repeater. Marked "A. Francotte & Co. Makers" on the top of the slide.

CURRENTLY IMPORTED SHOTGUNS

SIDELOCK/SIDE-BY-SIDE

AyA sidelock shotguns use the Holland and Holland system. They feature double triggers, articulated front trigger, cocking indicators, bushed firing pins, replaceable firing pins, replaceable hinge pins, and chopper lump barrels. Frame and sidelocks are case-colored. These shotguns weigh between 5 and 7 pounds depending on gauge and barrel length. Barrel lengths are offered in 26", 27", 28", and 29" depending on gauge. All stocks are figured walnut with hand checkering and oil finish. These guns are available with several extra cost options that

may affect price. Also influencing price of new guns is the fluctuating dollar in relation to Spanish currency.

Model No. 1

This model is offered in 12 gauge and 20 gauge with special English scroll engraving. Fitted with automatic ejectors and straight grip stock with exhibition quality wood.

ALLEN, ETHAN

Grafton, Massachusetts

The company was founded by Ethan Allen in the early 1800s. It became a prolific gun-making firm that evolved from Ethan Allen to Allen & Thurber, as well as the Allen & Wheelock Company. It was located in Norwich, Connecticut, and Worchester, Massachusetts, as well as Grafton. It eventually became the Forehand & Wadsworth Company in 1871 after the death of Ethan Allen. There were many and varied firearms produced under all of the headings described above. If one desires to collect Ethan Allen firearms, it would be advisable to educate oneself, as there are a number of fine publications available on the subject. The basic models and their values are listed.

First Model Pocket Rifle

Manufactured by Ethan Allen in Grafton, Massachusetts. It was a bootleg-type, under-hammer, single-shot pistol chambered for .31 percussion. Larger-caliber versions have also been noted. It had barrel lengths from 5" to 9" that were part-octagon in configuration. It had iron mountings and was blued with walnut grips. The barrel was marked, "E. Allen/ Grafton/Mass." as well as "Pocket Rifle/Cast Steel/ Warranted." There were approximately 2,000 manufactured from 1831 to 1842.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*

Second Model Pocket Rifle

A rounded-frame, round-grip version of the First Model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1450	550	200

Bar Hammer Pistol

A double-action pistol with a top-mounted bar hammer. It was chambered for .28 to .36 caliber percussion. The half-octagon barrels were from 2" to 10" in length. They screwed out of the frame so it was possible to breech load them. The finish was blued with rounded walnut grips. They were marked, "Allen & Thurber/Grafton Mass." There were approximately 2,000 manufactured between the early 1830s and 1860.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1550	600	200

Tube Hammer Pistol

This version was similar to the Bar Hammer with a curved hammer without a spur. There were only a few hundred manufactured between the early 1830s and the early 1840s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2800	1200	400

Side Hammer Pistol

A single-shot, target-type pistol that was chambered for .34, .41, and .45 caliber percussion. It had a part-octagon barrel that was from 6" to 10" in length. There was a wooden ramrod mounted under the barrel. This model had a good quality rear sight that was adjustable. The ornate trigger guard had a graceful spur at its rear. The finish was blued with a rounded walnut grip. The barrel was marked, "Allen & Thurber, Worchester." There were approximately 300 manufactured in the late 1840s and early 1850s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1300	550	200

Center Hammer Pistol

A single-action chambered for .34, .36, or .44 percussion. It had a half-octagon barrel from 4" to 12" in length. It had a centrally mounted hammer that was offset to the right side to allow for sighting the pistol. The finish was blued with walnut grips. It was marked, "Allen & Thurber, Allen Thurber & Company." Some specimens are marked, "Allen & Wheelock." There were several thousand manufactured between the late 1840s and 1860.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1300	550	200

Double-Barrel Pistol

A SxS, double-barrel pistol with a single trigger. It was chambered for .36 caliber percussion with 3" to 6" round barrels. The finish was blued with walnut grips. Examples with a ramrod mounted under the barrel have been noted. The flute between the barrels was marked, "Allen & Thurber," "Allen Thurber & Company," or "Allen & Wheelock." There were approximately 1,000 manufactured in the 1850s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1150	500	150

Allen & Wheelock Center Hammer Pistol

A single-action pocket pistol chambered for .31 to .38 caliber percussion. It had octagon barrels from 3" to 6" in length. The finish was blued with square butt walnut grips. The barrel was marked, "Allen & Wheelock." There were approximately 500 manufactured between 1858 and 1865.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1000	450	100

Allen Thurber & Company Target Pistol

A deluxe, single-action target pistol that was chambered for .31 or .36 caliber percussion. It had a heavy, octagon barrel that was from 11" to 16" in length. There was a wooden ramrod mounted underneath the barrel. The mountings were of German silver, and there was a detachable walnut stock with a deluxe, engraved patchbox. This weapon was engraved, and the barrel was marked, "Allen Thurber & Co./Worchester/Cast Steel." This firearm was furnished in a fitted case with the stock, false muzzle, and various accessories. It was considered to be a very high grade target pistol in its era. The values listed are for a complete-cased outfit. There were very few manufactured in the 1850s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	8800	3700	1000

NOTE: For pistols without attachable stock deduct 75 percent.

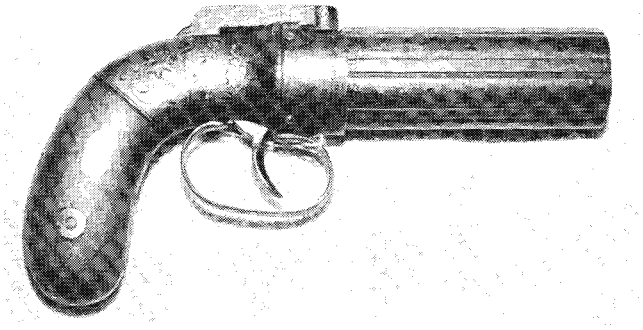
Ethan Allen Pepperboxes

During the period from the early 1830s to the 1860s, this company manufactured over 50 different variations of the revolving, pepperbox-type pistol. They were commercially quite successful and actually competed successfully with the Colt revolving handguns for more than a decade. They were widely used throughout the United States, as well as in Mexico, and during our Civil War. They are widely collectible because of the number of variations that exist. The potential collector should avail himself of the information available on the subject. These pepperboxes can be divided into three categories.

No. 1: Manufactured from the 1830s until 1842, at Grafton, Massachusetts.

No. 2: Manufactured from 1842 to 1847, at Norwich, Connecticut.

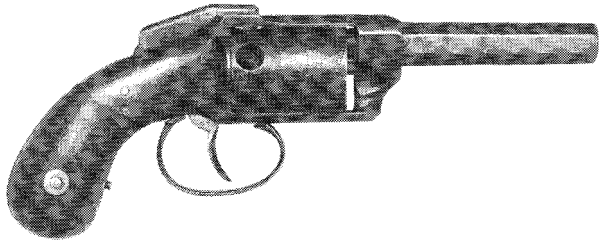
No. 3: Manufactured from 1847 to 1865, at Worchester, Massachusetts.



There are a number of subdivisions among these three basic groups that would pertain to trigger type, size, barrel length etc. It would be impossible to cover all 50 of these variations in a text of this type. We strongly suggest that qualified, individual appraisal be secured if contemplating a transaction. The values of these pepperbox pistols in excellent condition would be between $1,500 and $5,000. Most examples will be seen in the fair to good condition and will bring $1,000 to 2,000 depending on variation.

Large Frame Pocket Revolver

A double-action pocket revolver that was chambered for .34 caliber percussion. It had an octagon barrel from 3" to 5" in length. There were no sights. The 5-shot, unfluted cylinder was game scene engraved. The finish was blued with rounded walnut grips. It had a bar-type hammer. This was the first conventional revolver manufactured by this company, and it was directly influenced by the pepperbox pistol for which Ethan Allen had become famous. It was marked, "Allen & Wheelock" as well as "Patented April 16, 1845." There were approximately 1,500 manufactured between 1857 and 1860.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Small Frame Pocket Revolver

This version was similar to the Large Frame Pocket Revolver except chambered for .31 caliber percussion, with a 2" to 3.5" octagon barrel. It was slightly smaller in size, finished and marked the same. There were approximately 1,000 made between 1858 and 1860.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1200	500	150

Side Hammer Belt Revolver

A single-action revolver chambered for .34 caliber percussion. It had an octagon barrel from 3" to 7.5" in length. It featured a hammer that was mounted on the right side of the frame and a 5-shot, engraved, unfluted cylinder. The cylinder access pin is inserted from the rear of the weapon. The finish is blued with a case-colored hammer and trigger guard and flared butt walnut grips. It is marked, "Allen & Wheelock." There were two basic types. Values for the early model, of which 100 were manufactured between 1858 and 1861, are listed.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1300	600	200

Standard Model

The second type was the Standard Model, with a spring-loaded catch on the trigger guard as opposed to a friction catch on the early model. There were approximately 1,000 manufactured between 1858 and 1861.

Side Hammer Navy Revolver

This was a large-frame, military-type revolver that was similar to the Side Hammer Belt Model, chambered for .36 caliber percussion. It features an octagon, 5.5" to 8" barrel with a 6-shot, engraved cylinder. There was an early-production type with a friction catch on the trigger guard. There were approximately 100 manufactured between 1858 and 1861.

Center Hammer Army Revolver

A large, military-type, single-action revolver that was chambered for .44 caliber percussion. It had a 7.5", half-octagon barrel and a 6-shot, unfluted cylinder. The hammer was mounted in the center of the frame. The finish was blued with a case-colored hammer and trigger guard and walnut grips. The barrel was marked, "Allen & Wheelock. Worchester, Mass. U.S./Allen's Pt's. Jan. 13, 1857. Dec. 15, 1857, Sept. 7, 1858." There were approximately 700 manufactured between 1861 and 1862.

Center Hammer Navy Revolver

Similar to the Army Revolver except chambered for .36 caliber percussion with a 7.5", full-octagon barrel. Examples have been noted with 5", 6", or 8" barrels. Otherwise, it was similar to the Army model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3500	1450	500

Center Hammer Percussion Revolver

A single-action revolver chambered for .36 caliber percussion. It had an octagonal, 3" or 4" barrel with a 6-shot, unfluted cylinder. The finish was blued with walnut grips. This model supposedly was made for the Providence, Rhode Island, Police Department and has become commonly referred to as the "Providence Police Model." There were approximately 700 manufactured between 1858 and 1862.

—	—	1550	650	200

Lipfire Army Revolver

A large, military-type, single-action revolver that was chambered for the .44 lipfire cartridge. It had a 7.5", half-octagon barrel with a 6-shot, unfluted cylinder that had notches at its rear for the cartridge lips. The finish was blued with a case-colored hammer and trigger guard and square butt walnut grips. The barrel was marked, "Allen & Wheelock, Worchester, Mass." It resembled the Center Hammer Percussion Army Revolver. There were two basic variations, with a total of 250 Lipfire Army Revolver manufactured in the early 1860s.

Early Model
Top hinged loading gate.

—	—	700	300	100

Single-Shot Center Hammer

A single-shot derringer-type pistol that was chambered for the .22 caliber rimfire cartridge. It had part-octagon barrels from 2" to 5.5" in length that swung to the right side for loading. Some had automatic ejectors; others did not. The frame was either brass or iron with bird's-head or squared butt walnut grips. It was marked "Allen & Wheelock" or "E. Allen & Co." There were very few manufactured in the early 1860s.

Early Issue
Full-length, octagon barrel and a round, iron frame. It is rarely encountered.

Exc.	V.G.	Good	Fair	Poor
—	—	1050	400	100

Standard Issue
Squared butt or bird's-head.

Exc.	V.G.	Good	Fair	Poor
—	—	800	300	100

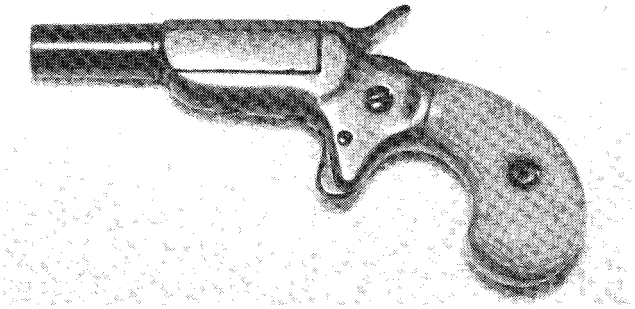
.32 Single-Shot Center Hammer

A larger-frame pocket pistol chambered for the .32 rimfire cartridge. It has a part-octagon or full-octagon barrel of 4" or 5" in length. It swung to the right side for loading. Otherwise, this model was similar to the .22-caliber version.

Exc.	V.G.	Good	Fair	Poor
—	—	850	400	100

Vest Pocket Derringer

A small pocket pistol chambered for the .22 rimfire cartridge. It had a 2", part-octagon barrel that swung to the right-hand side for loading. The cartridges were manually extracted. It featured a brass frame with a blued or plated barrel and walnut, bird's-head grips. The barrel was marked "Allen & Co. Makers." This was an extremely small firearm, and there were approximately 200 manufactured between 1869 and 1871.



Exc.	V.G.	Good	Fair	Poor
—	—	900	400	100

.32 Derringer

Similar to the Vest Pocket version, larger in size, and chambered for the .32 rimfire cartridge. It had a part-octagon barrel from 2" to 4" in length that swung to the right for loading. This version featured an automatic extractor. The barrel was marked "E. Allen & Co. Worchester, Mass." This was a very rare firearm, made between 1865 and 1871.

Exc.	V.G.	Good	Fair	Poor
—	—	800	350	100

.41 Derringer

The same size and configuration as the .32 caliber model except it was chambered for the .41 rimfire cartridge with barrel lengths of 2.5" to 2.75" in length. The markings were the same. There were approximately 100 manufactured between 1865 and 1871.

Exc.	V.G.	Good	Fair	Poor
—	—	2200	950	350

Center Hammer Muzzleloading Rifle

A single-shot rifle chambered for .44 caliber percussion. It had a 36" round barrel with an octagonal breech. It had a center-mounted hammer that was offset to the right for sighting. It had iron mountings. The finish was browned with a case-colored lock. There was a ramrod mounted under the barrel. It had a walnut buttstock with a crescent buttplate and no forearm. There were approximately 100 manufactured in the 1850s.

Exc.	V.G.	Good	Fair	Poor
—	—	1850	600	250

Side Hammer Muzzleloading Rifle

Similar to the Center Hammer model, with the hammer mounted on the right side of the lock. It was chambered for .38 caliber percussion, with an octagon barrel from 28" to 32" in length. It is occasionally found with a patchbox. The barrel is browned with a case-colored lock and a walnut stock with crescent buttplate. There were several hundred manufactured from the early 1840s to the 1860s.

Exc.	V.G.	Good	Fair	Poor
—	—	2750	900	350

Combination Gun

Either an Over/Under or side-by-side rifle chambered for 12 gauge and .38 caliber percussion. The barrels were from 28" to 34" in length. It had two hammers and double triggers with a ramrod mounted either beneath or on the right side of the barrels. The finish was browned with a walnut stock. Examples with a patchbox have been noted. Production was very limited, with the Over/Under versions worth approximately 20 percent more than the side-by-side values given. They were manufactured between the 1840s and the 1860s.

Exc.	V.G.	Good	Fair	Poor
—	—	4050	1350	550

Side Hammer Breech-loading Rifle

A unique rifle chambered for .36 to .50 caliber percussion. It was offered with various-length, part-octagon barrels. It had an unusual breech mechanism that was activated by a rotating lever which resembled a water faucet. The barrel was browned with a case-colored lock and a walnut stock. It was marked "Allen & Wheelock/ Allen's Patent July 3, 1855." There were approximately 500 manufactured between 1855 and 1860.

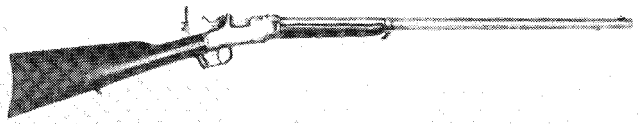
Exc.	V.G.	Good	Fair	Poor
—	—	3550	1600	500

Drop Breech Rifle

This single-shot rifle was chambered for the .22 through the .44 rimfire cartridges. It had a part-octagon barrel from 23" to 28" in length. The breech was activated by the combination trigger guard action lever. Opening the breech automatically ejected the empty cartridge. The external hammer was manually cocked, and it featured an adjustable sight. The barrel was blued with a case-colored frame and a walnut stock. It was marked "Allen & Wheelock/ Allen's Pat. Sept. 18, 1860." There were approximately 2,000 manufactured between 1860 and 1871.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	1550	600	200

Lipfire Revolving Rifle

A 6-shot, cylinder-type rifle chambered for the .44 caliber lipfire cartridge. It had an unfluted cylinder with slots at its rear to allow for the cartridge lips. The round barrels were 26" to 28" in length with an octagon breech. The finish was blued with a case-colored frame and a walnut buttstock. This model was not marked with the maker's name. There were approximately 100 manufactured between 1861 and 1863.

Courtesy Buffalo Bill Historical Center, Cody, Wyoming

ALLEN FIREARMS

Santa Fe, New Mexico

SEE—Aldo Uberti

ALPHA ARMS CO.

Flower Mound, Texas

Alpha Arms Co. produced high-grade bolt-action rifles on a semi-custom basis. It manufactured a number of standard models but offered many options at additional cost. Some of these options were custom sights and finishes and an octagonal barrel. These extra features would add to the value of the models listed. This company operated from 1983 until 1987.

Alpha Jaguar Grade I

Built on a Mauser-type action with barrel lengths from 20" to 24". It was chambered for most calibers between .222 Rem. and .338 Win. Mag. The stock was made from a synthetic laminated material that the company called Alphawood. This model was introduced in 1987 and only produced that year.

ALSOP, C.R.

Middletown, Connecticut

This firearms manufacturer made revolvers during 1862 and 1863. They made two basic models, the Navy and the Pocket model. Some collectors consider the Alsop to be a secondary U.S. martial handgun, but no verifying government contracts are known to exist.

First Model Navy Revolver

A .36 cal. revolver with a 3.5", 4.5", 5.5", or 6.5" barrel length and a 5-shot cylinder. It has a blued finish, wood grips, and a peculiar hump in its backstrap. The first model has a safety device which blocks the spur trigger. This device is found on serial numbers 1-100. Markings are: "C.R. Alsop Middletown, Conn. 1860 & 1861" on the barrel. The cylinder is marked "C.R. Alsop" & "Nov. 26th, 1861"; the side plate, "Patented Jan. 21st, 1862."

Exc.	V.G.	Good	Fair	Poor
—	—	3850	1300	500

Standard Model Navy Revolver

Exactly the same as the First Model without the safety device. They are serial numbered 101 to 300.

Exc.	V.G.	Good	Fair	Poor
—	—	3350	900	300

Pocket Model Revolver

A .31 cal. 5-shot revolver with spur trigger, 4" round barrel, blued finish, and wood grips. It is very similar in appearance to the Navy model but smaller in size. It is marked "C.R. Alsop Middletown, Conn. 1860 & 1861" on the barrel. The cylinder is marked "C.R. Alsop Nov. 26th, 1861." They are serial numbered 1-300.

AMAC

American Military Arms Corporation
formerly Iver Johnson
Jacksonville, Arkansas

The Iver Johnson Arms Co. was founded in 1871 in Fitchsburg, Massachusetts. It was one of the oldest and most successful of the old-line arms companies on which our modern era has taken its toll. In 1984 the company moved to Jacksonville, Arkansas; in 1987 it was purchased by the American Military Arms Corporation. This company has released some of the older designs as well as some new models. In 1993 the company went out of business. The original Iver Johnson line is listed under its own heading.

U.S. Carbine .22

This is a semi-automatic, military-style carbine that is patterned after the M1 of WWII fame. It is chambered for the .22 LR cartridge, has an 18.5" barrel and features military-style peep sights and a 15-shot detachable magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
250	150	125	100	75	50

Wagonmaster Lever Action Rifle

This model is chambered for the .22 rimfire cartridge, has an 18.5" barrel and is styled after the Win. 94. The stock has a straight grip; and the forend, a barrel band. There are adjustable sights and a tube magazine that holds 15 LR cartridges.

NIB	Exc.	V.G.	Good	Fair	Poor
250	150	120	100	75	50

Wagonmaster .22 Magnum

This model is the same as the Wagonmaster except that it is chambered for the .22 rimfire magnum.

NIB	Exc.	V.G.	Good	Fair	Poor
300	175	120	100	75	50

Targetmaster Pump-Action Rifle

This model is a slide- or pump-action that is chambered for the .22 rimfire cartridges. It has an 18.5" barrel with adjustable sights and a straight grip stock. It holds 12 LR cartridges.

NIB	Exc.	V.G.	Good	Fair	Poor
300	150	120	100	75	50

Li'L Champ Bolt-Action Rifle

This model is a scaled-down single-shot that is chambered for the .22 rimfire cartridges. It has a 16.25" barrel, adjustable sights, a molded stock, and nickel-plated bolt. This model is 33" overall and is designed to be the ideal first rifle for a young shooter.

NIB	Exc.	V.G.	Good	Fair	Poor
150	75	60	45	35	20

M .30 Cal. Carbine

A military-style carbine styled after the M1 of WWII fame. It is chambered for the .30 Carbine cartridge and has an 18" barrel with military-style sights and hardwood stock. There are detachable 5-, 15-, and 30-round magazines available.

NIB	Exc.	V.G.	Good	Fair	Poor
375	275	225	175	125	90

Paratrooper .30 Carbine

This model is similar to the M1 model with a folding stock.

AMERICAN ARMS

Garden Grove, California

Eagle .380

This pistol was a stainless steel copy of the Walther PPKS. It was a semi-auto blowback that was chambered for the .380 ACP. It was double-action and had a 3.25" barrel and a 6-shot detachable magazine. An optional feature was a black Teflon finish that would increase the value by 10 percent. This company ceased production in 1985.

Exc.	V.G.	Good	Fair	Poor
300	225	175	150	100

AMERICAN ARMS CO.

Boston, Massachusetts

The history of American Arms is rather sketchy, but it appears the company was formed in 1853 as the G. H. Fox Co. and then became the American Tool & Machine Co. in 1865. In 1870 they formed a new corporation called American Arms Company with George Fox as the principle stockholder. This corporation was dissolved in 1873; a second American Arms Co. was incorporated in 1877 and a third in 1890. It is unclear if these corporations had essentially the same owners, but George H. Fox appears as a principal owner in two of the three. One could assume that financial problems forced them to bankrupt one corporation and reorganize under another. American Arms manufactured firearms in Boston, Massachusetts, from 1866 until 1893. In 1893 they moved to Bluffton, Alabama and manufactured guns until 1901.

Fox Model "Swing Out" Hammer Double

Manufactured from 1870 to 1884, designed by George H. Fox, not to be confused with A.H. Fox. This model is unusual in that the barrel swings to the right for loading and the barrel release is located on the tang. It comes in 10 and 12 gauge, 26", 28", 30" and 32", with twist, Damascus or laminated barrels. Early production models have conventional soldered together barrels. Later variations after 1878 feature a unique design in that the barrels are dovetailed together. These guns could be ordered with several options and choices of finish; this would add premium value to a particular gun.

Exc.	V.G.	Good	Fair	Poor
—	1800	750	300	150

Semi-Hammerless Double

Manufactured from 1892 to 1901. This model features a cocking lever that cocks an internal firing pin. It comes in 12 gauge with 30" twist barrels.

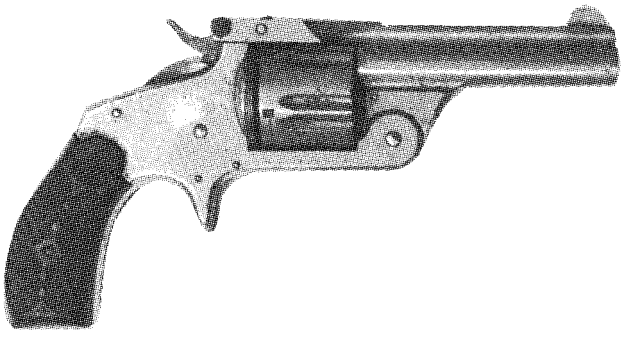
TOP BREAK REVOLVERS



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Spur Trigger—Single-Action Five-Shot Revolver

These revolvers were made between 1883 and 1887 in .38 S&W only. They feature an unusual manual ring extractor and double-fluted cylinder. They are nickel plated with hard rubber grips and are marked "American Arms Company Boston Mass."

Exc.	V.G.	Good	Fair	Poor
—	550	300	100	75

Standard Trigger Double-Action Model 1886 Revolver

This model has a standard trigger and trigger guard, comes in .32 short and .38 S&W with a 3.5" barrel, in blue or nickel finish. The early models are equipped with the ring extractor and double fluted cylinder. Later variations have a standard star extractor and single fluted cylinder.

Hammerless Model 1890 Double-Action

These guns were manufactured from 1890 to 1901. It has an adjustable single- or double-stage trigger pull and several unusual safety devices. It comes in .32 and .38 S&W with a 3.25" ribbed barrel, fluted cylinder, nickel finish, hard rubber grips with logo and ivory or mother of pearl grips. It is marked "American Arms Co. Boston/Pat. May 25, 1886." The top strap is marked "Pat. Pending" on early models and "Pat's May 25'86/Mar 11'89/June 17'90" on later models.

Double-Barrel Derringers

American Arms Co. manufactured a two-barrel derringer-style pocket pistol. The barrels were manually rotated to load and fire the weapon. The pistol had a nickel-plated brass frame, blued barrels, and walnut grips. The markings were: "American Arms Co. Boston, Mass." on one barrel and "Pat. Oct. 31, 1865" on the other barrel. There were approximately 2,000-3,000 produced between 1866 and 1878. Beware of fakes!

Combination .22 caliber R.F. and .32 caliber R.F.

A two-caliber combination with 3" barrel, square butt only. The most common variation.

SHOTGUNS SIDE-BY-SIDE

Gentry-York
These two designations cover the same model. Prior to 1988 this model was called the York. In 1988 the receiver was case-colored and the designation was changed to the Gentry. This model was chambered for 12, 20, 28 gauge and .410. It had chrome-lined barrels from 26" to 30" in length, double triggers, 3" chambers, and automatic ejectors. The boxlock action featured scroll engraving, and the walnut stock was hand checkered. It was introduced in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
750	625	450	300	200	150

10 Gauge Magnum Shotgun
A 10 gauge with 3.5" chambers and 32" barrels. It featured a scroll-engraved, chromed boxlock action and double triggers. It was imported from Spain in 1986 only.

NIB	Exc.	V.G.	Good	Fair	Poor
850	750	550	350	250	150

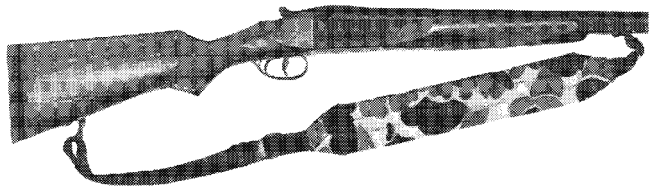
12 Gauge Magnum Shotgun
As above but chambered for 12 gauge 3-1/2" magnum shell.

NIB	Exc.	V.G.	Good	Fair	Poor
800	700	500	300	200	150

Brittany
Chambered for 12 and 20 gauge with 25" or 27" barrels with screw-in choke tubes. It had a solid matted rib and a case-colored, engraved boxlock action. Automatic ejectors and a single-selective trigger were standard on this model, as was a hand checkered, walnut, straight grip stock with semi-beavertail forend. This model was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
850	750	600	450	375	200

Turkey Special
A utilitarian model designed to be an effective turkey hunting tool. It is chambered for the Magnum 10 and 12 gauges and has 26" barrels. The finish is parkerized, and the stock is also finished in a non-glare matte. Sling-swivel studs and a recoil pad are standard. This model was introduced in 1987.



NIB	Exc.	V.G.	Good	Fair	Poor
800	700	450	350	250	150

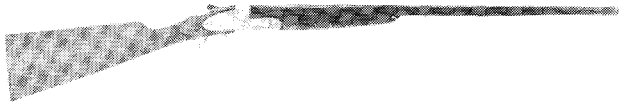
Waterfowl Special
Similar to the Turkey Special but chambered for the 10 gauge only. It is furnished with a camouflaged sling. Introduced in 1987.

NIB	Exc.	V.G.	Good	Fair	Poor
950	850	550	350	250	150

Specialty Model
Similar to the Turkey Special and offered in 12 gauge 3-1/2" magnum.

NIB	Exc.	V.G.	Good	Fair	Poor
875	750	500	300	200	150

Derby
Chambered for the 12 and 20 gauge. It has 26" or 28" barrels with 3" chambers and automatic ejectors. Either double or single-selective triggers are offered, and the sidelock action is scroll engraved and chromed. The checkered straight grip stock and forearm are oil-finished. This model was introduced in 1986. No longer imported.



NIB	Exc.	V.G.	Good	Fair	Poor
825	700	600	500	350	200

Grulla #2

Top-of-the-line model chambered for 12, 20 and 28 gauge and .410. The barrels are 26" or 28" with a concave rib. The hand-fitted full sidelock action is extensively engraved and case-colored. There are various chokes, double triggers, and automatic ejectors. The select walnut, straight grip stock and splinter forend is hand checkered and has a hand-rubbed oil finish. This model was introduced in 1989. No longer imported.

2500	1750	1250	900	500	250

SHOTGUNS O/U

F.S. 200

A trap or skeet model that was chambered for 12 gauge only. It had 26" Skeet & Skeet barrels or 32" Full choke barrels on the trap model. The barrels were separated and had a vent rib. The boxlock action had a Greener crossbolt and was either black or matte chrome-plated. It featured a single-selective trigger, automatic ejectors, and a checkered walnut pistol grip stock. The F.S. 200 was imported in 1986 and 1987 only.

Exc.	V.G.	Good	Fair	Poor
675	575	465	350	150

F.S. 300

Similar to the F. S. 200 with lightly engraved side plates and a 30" barrel offered in the trap grade. It was imported in 1986 only.

Exc.	V.G.	Good	Fair	Poor
800	675	565	450	250

F.S. 400

Similar to the F.S. 300 with an engraved, matte chrome-plated receiver. It was imported in 1986 only.

Exc.	V.G.	Good	Fair	Poor
1100	950	800	650	350

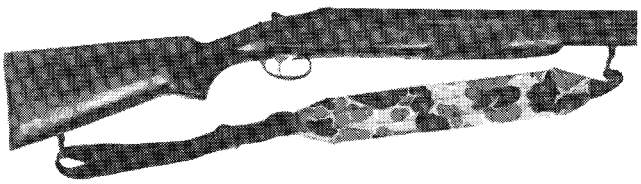
F.S. 500

Similar to the F.S. 400 with the same general specifications. It was not imported after 1985.

Exc.	V.G.	Good	Fair	Poor
1150	1000	850	700	350

Waterfowl Special

Chambered for the 12 gauge Magnum with 3.5" chambers. It has 28" barrels with screw-in choke tubes. There are automatic ejectors and a single-selective trigger. The finish is parkerized with a matte finished stock, sling swivels, and camouflaged sling and a recoil pad. It was introduced in 1987.



NIB	Exc.	V.G.	Good	Fair	Poor
875	700	500	350	300	150

Waterfowl 10 Gauge

The same as the Waterfowl Special but is chambered for the 10 gauge Magnum with double triggers.

NIB	Exc.	V.G.	Good	Fair	Poor
975	850	600	400	300	200

Turkey Special

Similar to the Waterfowl Special 10 gauge with a 26" barrel with screw-in choke tubes.

NIB	Exc.	V.G.	Good	Fair	Poor
975	850	600	350	300	200

Lince

Chambered for the 12 and 20 gauge and had 26" or 28" barrels with 3" chambers and various chokes. The boxlock action had a Greener crossbolt and was either blued or polished and chrome-plated. The barrels were blued with a ventilated rib. It had a single-selective trigger and automatic ejectors. The Lince was imported in 1986 only.

Exc.	V.G.	Good	Fair	Poor
500	425	350	300	200

Silver Model

Similar to the Lince with a plain, unengraved, brushed-chrome-finished receiver. It was imported in 1986 and 1987.

Exc.	V.G.	Good	Fair	Poor
500	425	350	300	200

Silver I

Similar to the Silver but is available in 28 gauge and .410, as well as 12 and 20 gauge. It also has a single-selective trigger, fixed chokes, extractors, and a recoil pad. It was introduced in 1987.

NIB	Exc.	V.G.	Good	Fair	Poor
650	550	325	275	200	175

NOTE: Add $25 for 28 gauge and .410 bore guns.

Silver II

Similar to the Silver I with screw-in choke tubes, automatic ejectors, and select walnut. It was introduced in 1987.

NIB	Exc.	V.G.	Good	Fair	Poor
750	650	450	350	300	150

NOTE: Add $25 for 28 gauge and .410 bore guns.

Silver II Lite

Introduced in 1994 this model is designed as an upland game gun. Offered in 12, 20, and 28 gauge with 26" barrels. Chambered for both 2-3/4" and 3" shells. Frame is made from a lightweight steel alloy. No longer imported.

NIB	Exc.	V.G.	Good	Fair	Poor
875	775	550	400	300	150

Silver Competition/Sporting

Offered in 12 gauge with a choice of 28" or 30" barrels which are made from chrome moly. Barrels have elongated forcing cones, chromed bores and are ported to help reduce recoil. Comes with interchangeable choke tubes. The single-selective trigger is mechanical. Weighs about 7-1/2 pounds. In 1996 a 20 gauge model was added with 28" barrel and 3" chambers.

NIB	Exc.	V.G.	Good	Fair	Poor
950	800	600	400	300	150

Silver Hunter

Introduced in 1999 this model is offered in 12 and 20 gauges with 26" and 28" barrels. Single-selective trigger with extractors. Choke tubes standard. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
625	500	400	—	—	—

Bristol (Sterling)

Chambered for 12 and 20 gauge. It has various barrel lengths with a vent rib and screw-in choke tubes. The chambers are 3", and the chrome-finished action is a boxlock with Greener crossbolt and game scene engraved side plates. There are automatic ejectors and a single-selective trigger. It was introduced in 1986, and in 1989 the designation was changed to the Sterling. No longer imported.

NIB	Exc.	V.G.	Good	Fair	Poor
825	750	675	500	400	200

Sir

Chambered for the 12 and 20 gauge with 3" chambers, various barrel lengths and chokings and a ventilated rib. The chrome-finished sidelock action has a Greener crossbolt and is engraved with a game scene. There are automatic ejectors and a single-selective trigger. This model was imported in 1986. No longer imported.

Exc.	V.G.	Good	Fair	Poor
875	750	625	500	250

Royal

Chambered for the 12 and 20 gauge. It is manufactured in various barrel lengths and chokes with a vent rib and 3" chambers. The chrome-finished sidelock action has a Greener crossbolt and is profusely scroll-engraved. It has automatic ejectors and a single-selective trigger. The select pistol grip walnut stock is hand checkered and oil-finished. This model was imported in 1986 and 1987. No longer imported.

Exc.	V.G.	Good	Fair	Poor
1500	1275	1000	800	400

Excelsior

Similar to the Royal with extensive deep relief engraving and gold inlays. This model was imported in 1986 and 1987. No longer imported.

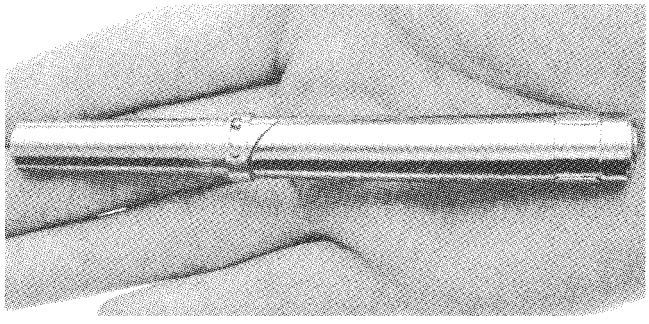
Model 2—Pen Pistol
Introduced in 1993 this is a legal pistol that cannot be fired from its pen position but requires that it be pulled apart and bent 80 degrees to fire. Made from stainless steel it is offered in .22 LR, .25 ACP, and .32 ACP. The length in pen form is 5.6" and in pistol form is 4.2". Barrel length is 2". Diameter varies from 1/2" to 5/8". Weight is 5 oz. No longer in production.



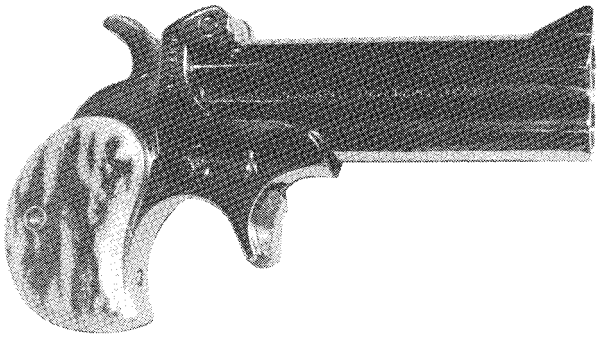
NIB	Exc.	V.G.	Good	Fair	Poor
600	395	300	225	100	85

Model 3
This model is a single-barrel derringer. Barrel length is 2.5" and swing down to load. Frame and barrel are stainless steel. Offered in .38 Special or .32 Magnum. Weighs about 8 oz. Production of this model has been temporary halted.

NIB	Exc.	V.G.	Good	Fair	Poor
150	100	85	75	65	50

Model 4

Similar in appearance to the Model 3 but fitted with a 4.1" barrel. Overall length is 6" and weight is about 16.5 oz. Chambered for 3" .410 bore, .45 Long Colt, .44 Magnum, or .357 Magnum.



NIB	Exc.	V.G.	Good	Fair	Poor
375	300	275	250	200	125

NOTE: For .45-70 add $150. For .44 magnum add $100.

Model 4—Engraved

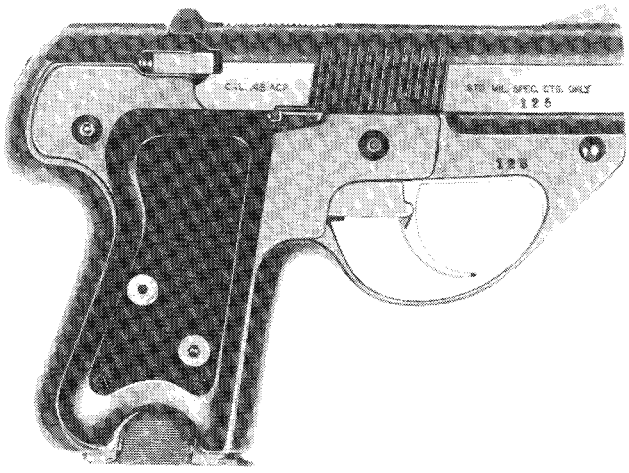
Semmerling LM-4

This gun has been in production for approximately 10 years, built by various companies. This latest offering by American Derringer may, with the right marketing and manufacturing approach, be the one that makes a commercial success of this fine firearm concept. The LM-4 was designed as the ultimate police backup/defense weapon. It is a manually operated, 5-shot repeater only 5.2" long, 3.7" high, and 1" wide. It is chambered for the .45 ACP and is undoubtedly the smallest 5-shot .45 ever produced. The LM-4 is made of a special tool steel and is either blued or, at extra cost, hard chrome-plated. A stainless steel version is also available. The LM-4 is not a semi-automatic, although it physically resembles one. The slide is flicked forward and back after each double-action squeeze of the trigger. This weapon is virtually hand-built and features high visibility sights and a smooth trigger. It is an extremely limited production item, and the company produces only two per week. The price and availability may fluctuate, so the company should be contacted for accurate figures. The values for the guns produced before American Derringer's involvement will be found in the section dealing with the Semmerling. These values are for the latest production by American Derringer. Unclear as to how many were actually produced or whether it is still in production.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
2500	2000	1500	—	—	—

NOTE: Hard chrome add $200. Stainless steel add 35 percent.

LM-5

Built of stainless steel this semi-auto is chambered for the .32 Mag. or .25 Auto. The barrel length is 2.25" and the overall length is 4", height is 3". Wooden grips are standard. Offered in limited quantities. Weight is approximately 15 oz. Discontinued.

AMERICAN FIRE ARMS MFG. CO., INC.

San Antonio, Texas

This company operated between 1972 and 1974, producing a .25 ACP pocket pistol and a stainless steel .38 Special derringer. A .380 auto was produced on an extremely limited basis.

American .38 Special Derringer

A well-made, stainless steel O/U derringer that was similar in appearance and function to the old Remington O/U. It had 3" barrels that pivoted upward for loading. This gun was a single-action that had an automatic selector and a spur trigger. The smooth grips were of walnut. There were approximately 3,500 manufactured between 1972 and 1974.

Exc.	V.G.	Good	Fair	Poor
200	180	150	125	90

American .25 Automatic

A small, blowback, semi-automatic pocket pistol that was chambered for the .25 ACP cartridge. It had a 2" barrel and was made of either stainless steel or blued carbon steel. The grips were of plain uncheckered walnut, and the detachable magazine held 7 shots. It was manufactured until 1974.

Courtesy J.B. Wood

Exc.	V.G.	Good	Fair	Poor
200	150	125	100	75

NOTE: For stainless steel add 20 percent.

American .380 Automatic

Similar to the .25 except larger. The barrel was 3.5", and the gun was made in stainless steel only. The grips were of smooth walnut, and it held 8 shots. There were only 10 of these .380's manufactured between 1972 and 1974. They are extremely rare, but there is little collector base for this company's products, and the value is difficult to estimate.

AMERICAN GUN CO., NEW YORK

Norwich, Connecticut
Maker—Crescent Firearms Co.

Side-by-Side Shotgun

A typical trade gun made around the turn of the century by the Crescent Firearms Co. to be distributed by H. & D. Folsom. These are sometimes known as "Hardware Store Guns," as that is where many were sold. This particular gun was chambered for 12, 16, and 20 gauges and was produced with or without external hammers. The length of the barrels varied, as did the chokes. Some were produced with Damascus barrels; some, with fluid steel. The latter are worth approximately 25 percent more.

NOTE: For a full listing of most of the variations of the Crescent Arms Co., and shotguns marked with American Gun Co. see "Crescent F.A. Co."

Knickerbocker Pistol

800	675	—	—	—	—

NOTE: Add $40 for octagon barrel.

AMES, N.P. PISTOLS

Springfield, Massachusetts

Overall length-11-5/8"; barrel length-6"; caliber-.54. Markings: on lockplate, forward of hammer "N.P. AMES/SPRINGFIELD/MASS," on tail, either "USN" or "USR" over date; on barrel, standard U.S. Navy inspection marks. N. P. Ames of Springfield, Massachusetts received a contract from the U.S. Navy in September 1842 for the delivery of 2,000 single-shot muzzleloading percussion pistols. All are distinguished by having a lock mechanism that lies flush with the right side of the stock. On the first 300 Ames pistols, this lock terminates in a point; the balance produced were made with locks with a rounded tail. This "boxlock" had been devised by Henry Nock in England, and was adapted to the U.S. Navy for the percussion pistols they ordered from Ames and Derringer. In addition to the 2,000 pistols for the Navy, the U.S. Revenue Cutter Service purchased 144 (distinguished by the "U S R" marks) for the forerunner of the U.S. Coast Guard. The latter commands triple the price over the "U S N" marked pistols, while the Navy pistols with pointed tails quadruple the value.

AMES SWORD CO.

Chicopee Falls, Massachusetts

Turbiaux Le Protector

Ames Sword Co. became one of three U.S. companies that produced this unique, French palm-squeezer pistol. The design consists of a round disk with a protruding barrel on one side and a lever on the other. The disk contains the cylinder that holds either seven 8mm rimfire or ten 6mm rimfire cartridges. The barrel protrudes between the fingers, and the lever trigger is squeezed to fire the weapon. The design was patented in 1883 and sold successfully in France into the 1890s. In 1892 Peter Finnegan bought the patents and brought them to Ames Sword. He contracted with them to produce 25,000 pistols for the Minneapolis Firearms Company. After approximately 1,500 were delivered, Finnegan declared insolvency, and after litigation, Ames secured the full patent rights. The Ames Company produced Protector Revolvers until at least 1917.

(See Chicago Firearms Co. and Minneapolis Firearms Co.)

ANCION & CIE

Liege, Belgium
See—French Military Firearms

ANCION MARX

Liege, Belgium
This company began production in the 1860s with a variety of cheaply made pinfire revolvers. They later switched to solid-frame, centerfire, "Velo-Dog"-type revolvers chambered for 5.5mm or 6.35mm. They were marketed in various countries under many different trade names. Some of the names that they will be found under are Cobalt, Extracteur, LeNovo, Lincoln, and Milady. The quality of these revolvers is quite poor; and collector interest, almost non-existent. Values do not usually vary because of trade names.

ANDERSON

Anderson, Texas

Anderson Under Hammer Pistol

An unmarked, under hammer percussion pistol that was chambered for .45 caliber. It had a 5" half-round/half-octagonal barrel with an all steel, saw handle-shaped frame. It had a flared butt with walnut grips. The finish was blued. There is little information on this pistol.

Exc.	V.G.	Good	Fair	Poor
—	—	900	400	150

ANDRUS & OSBORN

Canton, Connecticut

Andrus & Osborn Under Hammer Pistol

This pistol is of the percussion type and chambered for .25 caliber. The part-round/part-octagonal barrel is 6" long and features small silver star inlays along its length. The barrel is marked "Andrus & Osborn/Canton Conn." with an eagle stamped beside it. It is marked "Cast Steel" near the breech. The grips are of walnut, and the finish is browned. Active 1863 to 1867.

ARIZMENDI, FRANCISCO
Eibar, Spain
Originally founded in the 1890s, the company was reformed in 1914 and manufactured semi-automatic pistols.

Singer
The Singer was manufactured in a number of different variations and in calibers 6.35mm and 7.65mm. It was earlier called the Victor. The 6.35mm models resembled the Browning 1906. The 7.65mm model resembled the Browning Model 1910.

ARMALITE, INC.

Costa Mesa, California
Geneseo, Illinois (current production)

In 1995 Eagle Arms purchased the Armalite trademark and certain other assets. The new companies are organized under the Armalite name. The original company, formed in the mid 1950s, developed the AR-10, which in turn led to the development of the M-16 series of service rifles still in use today. All current models are produced at the Geneseo, Illinois, facility.

AR-24 Pistol

15-shot 9mm double-action semi-auto. Steel frame, fixed or adjustable sights. Compact version available. Introduced 2006. Pricing is for full-size pistol with adjustable sights. Deduct 15 percent for fixed sight versions.

NIB	Exc.	V.G.	Good	Fair	Poor
595	—	—	—	—	—

AR-24 Tactical Custom

Similar to above with tactical refinements including stippled front and back straps, 3-dot luminous sights, etc. Also available in compact version (shown).

250	180	125	80	50	35

AR-180

A gas-operated semi-automatic rifle chambered for the .223 or 5.56mm cartridge. The AR-180 is the civilian version of the AR18, which is fully automatic. It is a simple and efficient rifle that was tested by various governments and found to have potential. This rifle was also manufactured by Howa Machinery Ltd. and Sterling Armament Co. of England. The most common version is manufactured by Sterling. Those built by Armalite and Howa bring a small premium.

Howa

ARMY & NAVY CO-OPERATIVE SOCIETY

London, England

SEE—British Double Guns

ARNOLD ARMS

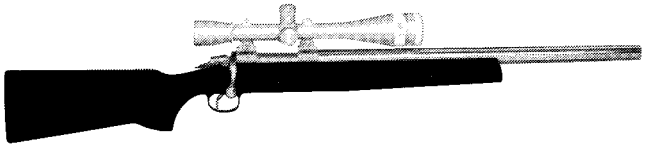
Arlington, Washington

This company offered a wide range of rifles and calibers including its own proprietary cartridges, from the 6mm Arnold to the .458 Arnold. Rifles were built on a choice of actions including the Apollo, Remington, Sako, and Winchester. These action choices affect the base price of the rifle. Went out of business in 2002. Values vary with geography.

NOTE: The prices listed are for a base rifle with Remington actions and matte blue finish unless otherwise noted.

Varminter I

This model features a heavy match grade barrel with straight taper. Lengths are from 24" to 26". Calibers are from .222 Rem. to .257 Arnold magnum. Choice of McMillian Varmint stock in various finishes and Pacific Research Varmint stock in flat black. Rifles weigh from 9 to 11 lbs. depending on caliber and configuration.



NIB	Exc.	V.G.	Good	Fair	Poor
2600	2000	—	—	—	—

NOTE: For Apollo action add approximately $1100.

Varminter II

This variation features a 24" to 26" medium weight match barrel with choice of McMillan or Pacific Research sporter stocks. Choice of triggers. Weight is 7.5 to 9 lbs. depending on configuration. Calibers from .223 Rem. to .257 Arnold Magnum.

ASTON, H./H. ASTON & CO. PISTOLS

Middleton, Connecticut

Overall length 14"; barrel length 8-1/2"; caliber .54. Markings: on lockplate, forward of hammer "U S/H. ASTON" or "U S/H. ASTON & CO.," on tail "MIDDTN/CONN/(date)"; on barrel, standard government inspection marks. Henry Aston of Middleton, Connecticut received a contract from the U.S. War Department in February 1845 for 30,000 single-shot percussion pistols. These were delivered between 1846 and 1852, after which Ira N. Johnston continued production under a separate contract. Three thousand of these pistols were purchased for Navy usage and many of these were subsequently marked

with a small anchor on the barrel near the breech. These Navy purchases will command a slight premium.

ASTRA-UNCETA SA

Guernica, Spain

Astra is a brand name placed on guns built by Esperanza y Unceta and then Unceta y Cia. This Spanish company has now incorporated its trade name into its corporate name and is now know as Astra-Unceta SA. The firm under the direction of Don Pedron Unceta and Don Juan Esperanza began business in Eibar on July 17, 1908 and moved to Guernica in 1913. The Astra trademark was adopted on November 25, 1914. Esperanza began production of the Spanish Army's Campo Giro pistol in 1913. The Model 1921 was marketed commercially as the Astra 400. After the Spanish Civil War Unceta was one of only four handgun companies permitted to resume manufacturing operations. An interesting and informative side note is that pistols with 1000 to 5000 model numbers were made after 1945.

Victoria

A 6.35mm semi-automatic pistol with a 2.5" barrel. Blued with black plastic grips. Manufactured prior to 1913.

CURRENTLY IMPORTED PISTOLS

Hialeah, Florida

Model A-100

This semi-automatic service pistol is chambered for the 9mm Parabellum, .40 S&W, or .45 ACP cartridges. The trigger action is double-action for the first shot, single-action for follow-up shots. Equipped with a decocking lever. The barrel is 3.8" long and the overall length is 7.5". Magazine capacity for the 9mm is 17 rounds, .40 S&W is 13 rounds, while the .45 holds 9 rounds. A blue or nickel finish is standard. Weight is approximately 34 oz. Also available in a featherweight model 9mm only at 26.5 oz.

AUSTRIAN MILITARY FIREARMS

The end of the Napoleonic Wars found the army of the Austria Hungarian Empire armed with a variety of flintlock firearms. The foot troops carried either the M1798 or the M1807 musket or the M1807 yager rifle. The mounted forces were armed with either the M1798 dragoon carbine, the M1798 Hussar-carbine, the M1798 rifled cavalry carbine, the M1781 Cuirassier musketoon, and the M1798 pistol. In 1828 a new flintlock musket superseded the M1798 pattern, only to be modified again in 1835. In the latter years, however, the Austrian military also began experimenting with a variation of the percussion system invented by Giuseppe Console, utilizing a small elongated copper cylinder filled with fulminate. In 1840, the flintlock muskets adopted in 1835 were adapted to a variation of this percussion system as modified by Baron von Augustin. This system was made army-wide in 1842 with the adoption of a new musket and yager rifle with locks specifically manufactured for the Augustin tubelocks. In 1849, a new rifle replaced the M1842 pattern; both of these rifles were based on the Devilgne chambered breech. In 1850, a cavalry carbine and a horse pistol were added to the tubelock series. All of these arms were either .69 or .71 caliber. The tubelock, however, was short-lived; in 1854, Austria abandoned the tubelock system in favor of standard percussion cap then widely used by the armies of Europe. At the same time it adopted a new smaller caliber (.54) which it applied to the new M1854 rifle-musket and the M1855 yager rifle. A horse pistol based on the same system (Lorenz's compressed, elongated ball) was adopted in 1859.

Large numbers of the Austrian longarms were imported to the United States in the first two years of the American Civil War. Beginning in 1863, the Confederate States also imported large numbers of the M1854 series rifle-muskets. Most of the tubelocks first being modified to standard percussion in Belgium before importation, arms of prime interest to American collectors, accordingly demand higher prices.

In 1867, the Austria-Hungarian Empire adopted two different breechloading mechanisms and the self-contained metallic cartridge. Those muzzleloading arms deemed acceptable for alteration (the M1854 series of rifle-muskets and rifles) were adapted to the Wanzel system. Newly made arms (the M1867 rifle) were made in conformity with Werndl's breechloading design.

During the period within the scope of this catalog, Austrian arms were generally made on contract with the major gun makers in and near Vienna ("Wien" in Austrian). These makers usually marked their products with their name upon the barrel of the arm, near the breech. The major makers included BENTZ, FERD. FRUWIRTH (who also simply marked his arms "F. F."), CARL HEISER, JOSEF JESCHER, ANNA OSTERLIEN, PIRKO, TH. ROTTME, G. SCHLAGER, TH. SEDERE, F. UMFAURER, WANZEL, and ZEILINGER (with the "Z" usually backwards). Lockplates were marked with the government ownership mark (a small double-headed eagle) and the date of manufacture (deleting the number "1" from the year, such as "847" for "1847.") Since the arms were not interchangeable, mating numbers are usually found on all the metal parts.

Austrian Musket, M1828

Overall length 57-3/4"; barrel length 42-1/2"; caliber .69. Basically following the pattern of the French M1822 musket, this arm still accepted the quadrangular M1799 bayonet, distinguished by having a solid socket with a hook ring at its rear, like the Prussian bayonet for the M1808 musket.

Exc.	V.G.	Good	Fair	Poor
—	—	2000	950	400

Austrian Musket, M1835

Overall length 57-3/4"; barrel length 42-1/2"; caliber .69. The M1835 musket follows the pattern of the Austrian M1807 musket, but is adapted for the Consule tubelock percussion system, which essentially replaced the frizzen and pan with a hinged tube retainer. This arm still uses the M1799 quadrangular bayonet.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1100	450

Austrian Musket, M1840

Overall length 57-3/4"; barrel length 42-1/2"; caliber .69. The M1840 musket was manufactured in flint. Its primary differences from the M1828 musket lie in its furniture (mainly the front band) and the bayonet attachment, which consists of a lug beneath the barrel and an elongated hook projecting from the forend of the stock to accept the new M1840 quadrangular bayonet. The bayonet is distinguished by having a straight slot in its socket, closed by a bridge.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1100	450

Austrian Musket, M1842

Overall length 57-3/4"; barrel length 42-1/2"; caliber .69 (.71). The M1842 musket was manufactured in Augustin tubelock. Its main distinction from the M1840 flintlock musket is the lock, which in addition to having the integral hinged tubelock mechanism in lieu of the frizzen, has a distinctly rounded rear tail. Although 25,000 of these muskets were imported into the United States for use by Fremont's forces in Missouri in 1861, many were subsequently altered to percussion. The Cincinnati contractors, Hall, Carroll & Co. or Greenwood & Co. accounted for 10,000 of these arms, all of which were altered to percussion by means of the cone-in-barrel system. These were also rifled and a portion of them sighted with a long range rear sight similar to the Enfield P1853 rifle-musket. Many of the balance

were subsequently sent to the Frankfort Arsenal in Philadelphia, where they were subcontracted to Henry Leman of Lancaster for alteration to standard percussion. Those altered by Leman are distinguished by having a new breechpiece with integral bolster, the latter with a cleanout screw through its face. In addition to the 25,000 imported for Fremont, the firm of H. Boker & Co. of New York imported approximately 8,000 Austrian M1842 muskets which it had altered to percussion in Belgium. The French method of adding a reinforced bolster to the top right-hand side of the barrel was used. Many of those were also rifled and sighted in the manner of the French adaptations fashionable in Europe. George Heydecker of New York City imported another 4,000 in 1863 that were seized in transit to Canada, reputedly for delivery to Mexican republican forces.

Austrian M1844 "Extra Corps" Musketoon

Overall length 48-3/8"; barrel length 33-1/2"; caliber .69 (.71). Is essentially a shortened version of the Austrian M1842 musket. In original Augustin tubelock, it is virtually unknown. Most of the production is thought to have been purchased by arms speculators at the beginning of the American Civil War and altered to standard percussion in Liege, Belgium. The Belgian alteration followed the second pattern adopted by that government to alter arms to percussion and consisted of brazing a "lump" of metal to the upper right-hand side of the barrel, into which a cone was threaded. The arms so altered were also rifled and sighted. The sights either copied the Austrian M1854 rifle-musket folding sight or the French "ladder" rear sight using the pattern utilized on the M1829 rifled cavalry musketoon. Over 10,000 of these arms were imported into the United States in 1861-1862 by Herman Boker & Co. of New York City.

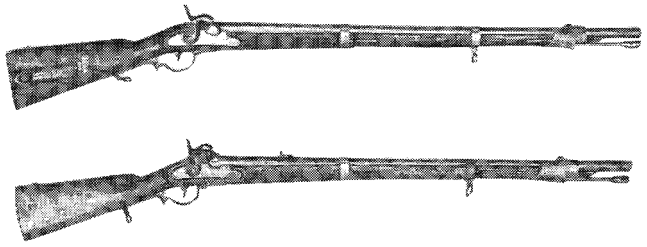
—	—	2000	950	350

Austrian M1842 Yager Rifle

Overall length 48-1/4"; barrel length 33-1/4"; caliber .69/.71. The Austrian M1842 yager rifle ("Kammer Busche") was originally manufactured in tubelock for the rifle battalions of the Austrian Army. Its bore terminated in a Delvigne breech, i.e. a chamber of lesser diameter than the caliber whose lip served as a base for disfiguring the projectile to fill the rifling. Made obsolete by the Thouvenin and Minie systems, many M1842 yager rifles were altered in 1860 in Belgium to standard percussion and sold to the Italian revolutionaries led by Giuseppe Garibaldi, giving the gun that nickname. Two methods of alteration were applied. One, the "Belgian" system, brazed a "lump" of iron to the upper right surface of the breech, which was tapped for a standard percussion cone. The other, the "Prussian," involved fitting the breech with a new barrel section incorporating a new bolster. At least 500 of these altered arms were imported into the United States during the American Civil War, where they (and the M1849 yager rifles similarly altered) were called "Garibaldi Rifles."



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2500	1100	350

Austrian M1849 Yager Rifle

Overall length 48"; barrel length 33-1/4"; caliber .71. The successor to the M1842 Austrian "Kammer Busche," the M1849 model is distinguished by having its barrel wedge fastened rather than retained by bands. Both the M1842 and the M1849 yager rifles were adapted to socket bayonets having long straight knife blades; both socket types were slotted. That of the M1842 was secured to the barrel by the same method as the M1842 Austrian musket; that of the M1849, however, locked onto a lug on the right side of the barrel and was secured by a rotating ring on the back of the socket. Adapted to standard percussion in the same manner as the M1842 yager rifles, more than 25,000 were sold to the U.S. War Department in 1862 and 1863.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

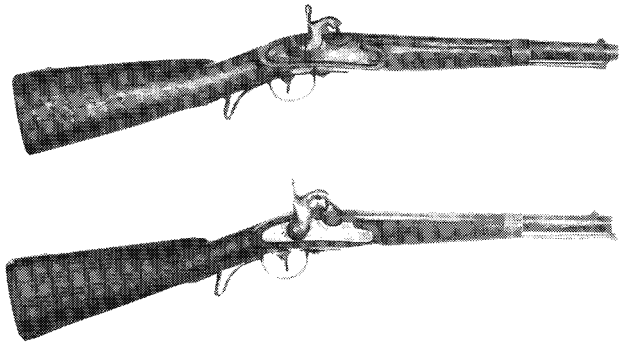
Austrian M1850 Horse Pistol

Overall length 16"; barrel length 8-7/8"; caliber .69. A bulky brass mounted pistol with lanyard ring, this arm was made originally in tubelock. However, a small quantity appear to have been altered to standard percussion locks in Liege, Belgium. In the process the double-strapped front bands of the original were removed and the forestock cut away to adapt the stock to an iron ramrod. (In Austrian service the ramrod was hung from the crossbelt of the mounted trooper.) Quantities imported into the United States are uncertain but may have been included among the 346 foreign horse pistols purchased by the U.S. War Department from P.S. Justice in 1861.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1500	600	250

Austrian M1850 Carbine

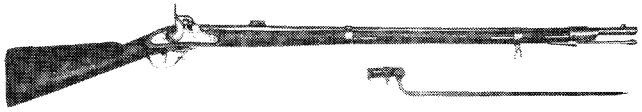
Overall length 30"; barrel length 14-1/2"; caliber .71. Originally manufactured in tubelock for Austrian cavalry service, this large caliber, short-barreled rifled carbine (12-groove rifling) saw service in the United States when 10,000 were purchased by U.S. purchasing agent George Schuyler in 1861. Those purchased for U.S. service, however, had been altered in Liege, Belgium for standard percussion locks in the same manner that the Austrian M1842 and M1849 yager rifles had been altered.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

M1854 Rifle-Musket (The "Lorenz")

Overall length 52"; barrel length 37-1/4"; caliber .54 (and .58). Adopted in 1854 as a replacement for its smoothbore muskets, the Austrian M1854 rifle-musket was made in three variants. The standard infantry arm had a simple block sight for mass volley fire. The rifles for the "rear rank" men were similar but with a folding leaf sight with windows graduated to 900 paces. A similar sight was also applied to the rifles for sharpshooter battalions, which also had a cheekpiece built into the buttstock. The quadrangular socket bayonet locked onto the front sight, whose sides were angled to accept the diagonal slot in the bayonet's socket. The Austrian M1854 rifle-musket was the second most prolifically imported arm during the American Civil War, with some 89,000 being imported into the Confederacy and more than 175,000 into the Union. Thousands of the latter were bored up to .58 caliber before being imported.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	2000	900	350

M1854 Yager Rifle

Overall length 43"; barrel length 28"; caliber .54. Designed for the rifle battalions of the Austrian army to replace the M1842 and M1849 rifles, the M1854 yager rifles are distinguished by having an octagonal, wedge-fastened barrel turned round near the muzzle to accept a socket bayonet with a long straight knife blade. An angled lug on the turned section engaged the diagonal slot in the bayonet's socket. The rear sight for these rifles is unusual, consisting of a curved slide that traverses two upright walls and can be locked with a turn key on its right side for various ranges up to 900 paces. These rifles were made for Austrian service without provision for a ramrod (that device being affixed to a crossbelt of the individual soldier). But the approximately 2,500 that were imported for U.S. service during the American Civil War were adapted for a ramrod by inletting a channel under the forestock.

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1250	450

Austrian M1859 Horse Pistol

Overall length 16" (less stock); barrel length 10-3/8"; caliber .54. The M1850 tubelock pistol was replaced in the Austrian service in 1859 with a new standard percussion rifled horse pistol firing the Lorenz "compression" elongated ball. Like the U.S. M1855 horse pistol, this new pistol had a detachable shoulder stock so that it could be used as a carbine. Like its predecessors, no provision was made for a ramrod, which continued to be attached to a belt crossing the trooper's torso.

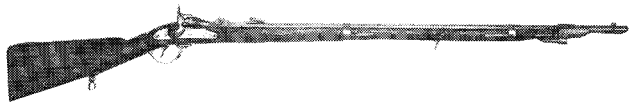
—	—	1500	600	250

Austrian M1854/67 "Wanzel" Alteration to Breechloader

Overall length 52-1/4"; barrel (bore) length; 34-1/2"; caliber .54. The "Wanzel" breechloading mechanism applied to the Austrian M1854 rifle-muskets is much like the Allin "trapdoor" applied in the U.S. to long arms during the period 1865-1873. A breech block that hinges forward upon the barrel is released by a lever on the right side of the block, permitting insertion of a brass cartridge. In the process of altering these arms to breechloaders the sling swivels were moved from the middle band and trigger guard bow to the middle of the forestock and the buttstock.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	1500	600	250

Austrian M1867 "Werndl" Breechloading Rifle

Overall length 48-1/4"; barrel (bore) length 31-1/4"; caliber 11mm. In 1867 the Austrian military adopted the breechloading system that had been invented by Joseph Werndl, director of the Austrian armory at Steyr. The breech of Werndl's design is rotated by means of a lever on its left side to expose the chamber for loading and extraction of cartridges. WERNDL appears on the top of the barrel in recognition of the designer's invention. In 1888 the Werndl rifles were superseded by the Mannlicher smokeless powder arms.

L. E. JURRAS CUSTOM

This custom maker produced a limited number of Auto Mag pistols in 1977. These arms are worth approximately 35-50 percent more than standard production models.

KENT LOMONT

As pistols made by this maker are essentially prototypes, it is advised that potential purchasers secure a qualified appraisal.

AUTO MAG, INC.
Irwindale, California

In 1998 this company was formed to produce 1,000 Harry Sanford Commemorative pistols. Chambered for .44 AMP cartridge. Each pistol comes in a walnut display case with special serial number with Harry Sanford's signature and the name Auto Mag on the receiver.

The last retail price for the Auto Mag is $2,750.

AUTO ORDNANCE CORP.

West Hurley, New York

In 1999 Kahr Arms purchased Auto Ordnance Corp.

Model 1911TC

BACON ARMS CO.
Norwich, Connecticut
Bacon Arms operated from 1862 until 1891. They have become known primarily for the production of cheaply made, solid-frame, rimfire revolvers known as "Suicide Specials." Bacon manufactured and sold under a number of different trademarks. They were: Bacon, Bonanza, Conqueror, Express, Gem, Governor, Guardian, and Little Giant. Collector interest is low, and values for all trademarks are quite similar.

3070	2590	—	—	—	—

RIFLES

AR .223 Ultimate Super Varmint

Fitted with a choice of 18", 20", or 24" heavy barrels with 1-in-12 twist. Flat top rail. Choice of single or two-stage trigger. Aluminum free-floating handguard. Bear Coat finish. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
1975	1600	1300	—	—	—

AR .223 Ultimate Super Match

Introduced in 2002 this model features a wide number of custom features with barrel lengths from 18" to 24". Special match carrier with integral rail system.

NIB	Exc.	V.G.	Good	Fair	Poor
2125	1700	1400	—	—	—

AR .223 M4-A2 Flattop

This model features a flat-top rail and match bolt and carrier. The 16" barrel has a integral compensator. Single stage trigger. Knights Armament Systems rail adapter. Bear Coat finish. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
2175	1725	1425	—	—	—

AR .223 IPSC Action Model

Similar to the model above but with 18" Super Match heavy barrel with integral compensator. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
2300	1875	1550	—	—	—

AR .223 Ultimate NRA Match

This model features numerous custom features and is fitted with a 30" barrel, special front and rear sights.

NIB	Exc.	V.G.	Good	Fair	Poor
2500	2000	—	—	—	—

NOTE: Add $750 for special sight package.

Bullpup Muzzleloader

This .50 caliber muzzleloader is fitted with a 28" stainless steel barrel with a Williams front sight and M16 National Match rear sight. Maple or synthetic stock. Internal ignition system.

NIB	Exc.	V.G.	Good	Fair	Poor
400	300	225	—	—	—

NOTE: Add $30 for maple stock and stainless steel.

Thunder Ranch Rifle

This .223 model is fitted with a bench rest 16" barrel. Upper receiver has a carry handle and a top rail. Free floating handguard, jewel two-stage trigger, floading front sight, and many other custom features. Thunder Ranch logo stamped on lower receiver. Weight is about 7.5 lbs. Introduced in 2004.

NIB	Exc.	V.G.	Good	Fair	Poor
2500	1925	—	—	—	—

BAFORD ARMS, INC.

Bristol, Tennessee

Thunder Derringer

A .410 bore or .44 Special single-shot pistol with 3" interchangeable barrels and a spur trigger. Additional interchangeable barrels are chambered in calibers from .22 to 9mm. Also available with a scope. Blued with a walnut grip. Introduced in 1988.

NIB	Exc.	V.G.	Good	Fair	Poor
175	110	85	70	55	35

NOTE: Add $50 for interchangeable barrel.

Fire Power Model 35

A 9mm semi-automatic pistol with a 4.75" barrel, Millett adjustable sights and 14-shot magazine. Fitted with a combat safety and hammer, and Pachmayr grips. Stainless steel. Introduced in 1988.

NIB	Exc.	V.G.	Good	Fair	Poor

2250	1750	1200	800	550	250

Model MC-109

A custom-made O/U shotgun with detachable sidelocks. Produced in limited quantities and most often to the purchaser's specifications.

NIB	Exc.	V.G.	Good	Fair	Poor
2850	2000	1500	950	600	300

CURRENTLY IMPORTED BAIKAL SHOTGUNS
Importer—European American Armory

IZH18

This is a single-barrel shotgun chambered for 12, 20, or .410 bore. Choice of 26.5" or 29.5" barrels. Hardwood stock. Ejectors. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor
95	75	50	—	—	—

IZK18MAX

Similar to the above model but with polished nickel receiver, vent rib, walnut stock, screw-in chokes, and ejectors. Offered in 12 and 20 gauge as well as .410 bore.

NIB	Exc.	V.G.	Good	Fair	Poor
170	125	100	—	—	—

IZH43

This side-by-side gun is available in 12, 16, 20, 28, and .410 bore. In barrel lengths for 20" to 28" depending on gauge. Internal hammers. Single-selective trigger, ejectors. Walnut stock.

NIB	Exc.	V.G.	Good	Fair	Poor
350	275	200	—	—	—

NOTE: Add $80 for 28 gauge and .410 bore guns.

IZH43K

Introduced in 1999 this is a 12 gauge 3" side-by-side hammer gun with choice of barrel lengths of 18.5", 20", 24", 26", and 28". Single-selective trigger or double trigger. Engraved side plates. Walnut stock with pistol grip. Weight is about 7.3 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
375	300	250	—	—	—

NOTE: Deduct $40 for double triggers.

MP213 Coach Gun

Similar to the above model but with internal hammers. Single or double triggers. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
275	255	175	—	—	—

NOTE: Deduct $40 for double triggers. Add $80 for 20 gauge.

IZH27

This is an over/under gun chambered for 12, 20, 28, and .410 bore. Choice of 26.5" or 28.5" barrels. Walnut stock. Single trigger with ejectors. Fixed chokes.

NIB	Exc.	V.G.	Good	Fair	Poor
350	275	225	—	—	—

NOTE: Add $35 for screw-in chokes. Add $85 for 28 gauge and .410 bore guns.

MP233

This over/under gun is chambered for the 12 gauge 3" shell with a choice of 26", 28", or 30" barrels. Walnut checkered stock. Single or double triggers. Screw-in chokes. Removable trigger assembly. Weight is about 7.3 lbs. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor
700	550	—	—	—	—

IZH94

This is an over/under combination gun with a 12 gauge upper barrel and centerfire rifle barrel on the under barrel. Barrel length is 24" or 26". This model is offered as an over/under rifle in calibers from .222 to .30-06. Walnut stock single or double trigger. Weight is about 7.3 lbs. Open sights.

NIB	Exc.	V.G.	Good	Fair	Poor
600	475	—	—	—	—

IZH81

This is a pump-action shotgun chambered for 12 gauge 3" shells. Barrel lengths are a choice of 20", 26", or 28". Five-round detachable magazine. Walnut stock.

NIB	Exc.	V.G.	Good	Fair	Poor
250	200	—	—	—	—

NOTE: Add $60 for vent rib.

MP131K

This is a pump-action shotgun with a choice of two different feeding sources: a tubular magazine or a detachable 3-round or 5-round box magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
350	275	225	—	—	—

MP133

This is a slide action shotgun chambered for the 12 gauge 3.5" shell. Available with barrel lengths of 20", 24", 26", or 28". Vent rib or all barrel lengths except 20". Walnut stock. Choke tubes for all barrel lengths except 20" (Cylinder choke). Introduced in 2001.

NIB	Exc.	V.G.	Good	Fair	Poor
275	225	—	—	—	—

MP153

This is a semi-automatic shotgun chambered for 12 gauge 3" shell. Choice of 26" or 28" barrels. Choice of walnut or black synthetic stock. Weight is about 7.8 lbs. Screw-in chokes. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor

BAKER GUN & FORGING CO.

Batavia, New York

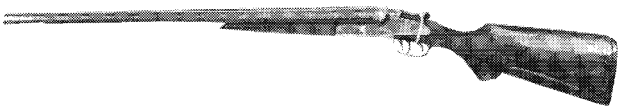
The Baker Gun & Forging Company was founded in early 1890, by Elias Baker, brother of William Baker. Made from drop forged parts, Baker single and double barrel shotguns quickly gained a reputation for strength and reliability among shooters of the period. Offered in a wide variety of grades, from plain utilitarian to heavily embellished models, Baker shotguns have in recent years become highly collectable. The company was sold on December 24, 1919, to H. & D. Folsom Arms Company of Norwich, Connecticut. The Folsom Company had for almost 20 years been the Baker Company's sole New York City agent and had marketed at least one Baker model that was only made for them. From 1919 to approximately 1923, Folsom continued to assemble and make Baker shotguns. Late model Bakers were made by the Crescent Firearms Company and have serial numbers with an "F" suffix.

The Baker Gun & Forging Company was the first American arms manufacturer to:

1. Make a single barrel trap shotgun.
2. Make a single barrel trap shotgun with a ventilated rib.

3. Make arms with an intercepting firing pin block safety.
4. Make a double barrel shotgun with hammers directly behind the firing pins.
5. Use a long swinging sear that once adjusted gave consistent trigger pull throughout the working life of an arm.

Those Baker shotguns manufactured between 1913 and 1923 that were engraved by Rudolph J. Kornbrath command substantial price premiums over the values listed.



Baker Trap Gun

A 12 gauge single barrel boxlock shotgun with either a 30" or 32" barrel. Blued, case hardened with a walnut stock.

BAKER, M.A.

Fayetteville, North Carolina

In business from 1857 through 1862, Baker produced sporting arms prior to the Civil War. During the Civil War Baker altered muskets and "common rifles." In addition, it is thought that Baker made rifles for the State of North Carolina with lockplates stamped M.A. BAKER/FAYETTEVILLE/N.C. These rifles resembled the U.S. Model 1841 Rifle and had these characteristics: Overall length 51-1/2"; Barrel length 35-1/8"; Caliber .50.

Exc.	V.G.	Good	Fair	Poor

BAKER, THOMAS

Baker shotguns and rifles were extensively imported into the United States during the nineteenth and early twentieth centuries. His premises were as follows:

1 Stonecutter Street	1838-1844
Bury Street, St. James	1844-1850
34 St. James Street	1850
88 Fleet Street	1851-1881
88 Fleet Street & 21 Cockspur Street	1882-1898
88 Fleet Street & 29 Glasshouse Street	1899-1905
29 Glasshouse Street	1905-1915
64 Haymarket	1915

BAKER, WILLIAM

Marathon, Syracuse and Ithaca, New York

William Baker designed and built double barrel shotguns from approximately 1869 until his death in 1889. His hammerless designs were used by the Baker Gun & Forging Company of Batavia, New York, which was established by his brother Elias in early 1890.

BALL REPEATING CARBINE

Lamson & Co.
Windsor, Vermont

Ball Repeating Carbine

A .50 caliber lever action repeating carbine with a 20.5" round barrel and 7-shot magazine. The receiver is marked "E.G. Lamson & Co./Windsor, Vt./U.S./Ball's Patent/June 23, 1863/Mar. 15, 1864." Blued, case hardened with a walnut stock. Late production examples of this carbine have been noted with browned or bright barrels. In excess of 1,500 were made between 1864 and 1867.

BALLARD PATENT ARMS

(until 1873; after 1875, see MARLIN)

On Nov. 5, 1861, C.H. Ballard of Worcester, Massachusetts, received a patent for a breechloading mechanism that would remain in production for nearly thirty years. Ballard patented a breechblock that tilted down at its front to expose the breech by activating the lever/triggerguard. During the twelve years that followed, Ballard rifles, carbines, and shotguns were produced by five interrelated companies. Four of these were successive: Ball & Williams, R. Ball & Co. (both of Worcester, Massachusetts), Merrimack Arms & Manufacturing Co. and Brown Manufacturing Company (both of Newburyport, Massachusetts). These four companies produced Ballard arms in a successive serial range (1 through approximately 22,000), all marked upon the top of the frame and the top of the barrel where it joins the frame. In 1863, another company, Dwight, Chapin & Company of Bridgeport, Connecticut, also produced Ballard rifles and carbines in a larger frame size, but in a different serial range (1 through about 1,900), usually marked on the left side of the frame below the agents' mark. The large frame carbines and rifles were produced to fulfill a U.S. War Department contract initially for 10,000 of each, subsequently reduced to 1,000 of each, issued to Merwin & Bray, the sole agents for the Ballard patent arms between 1862 and 1866. Most of the production during this period concentrated on military contracts, either for the U.S. War Department or the state of Kentucky, although the state of New York also purchased 500 for its state militia.

Ballard (Ball & Williams) Sporting Rifles, First Type (Serial numbers 1-100)

Barrel length 24"; caliber .38 rimfire. Markings: BALL & WILLIAMS/Worcester, Mass., and BALLARD'S PATENT/Nov. 5, 1861 on octagonal barrel. The distinctive feature of the earliest production of the Ballard rifles is the presence of an internal extractor conforming to the patent specifications. After approximately 100 rifles, this feature was dropped in favor of a manual extractor located under the barrel.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3000	1250	500

Ballard (Ball & Williams) Sporting Rifles, Second Type (Serial numbers 200-1600, and 1600-14,000, interspersed with martial production)

Barrel length 24", 28", or 30", usually octagonal, but part round/part octagonal as well; calibers .32, .38, and .44 rimfire. Markings: BALL & WILLIAMS/Worcester, Mass., BALLARD'S PATENT/Nov. 5, 1861, and MERWIN & BRAY, AGT'S/ NEW YORK, on facets of barrel until about serial no. 9000, thereafter the patent name and date on the right side of the frame and the manufacturer and agents on the left side of the frame. On early production (200 to 1500), the extractor knob is smaller and crescent shaped. Early production (prior to about serial no. 10,000) have solid breechblocks; after that number breechblocks are made in two halves. A few of these arms were made with bronze frames to facilitate engraving and plating. These should command a higher premium.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1650	730	280

Ballard (Ball & Williams) Sporting Rifles, Third Type (Serial numbers 14,000-15,000)

These arms are essentially the same as the second type in characteristics but have Merwin & Bray's alternate percussion mechanism built into the breechblock. The hammer is accordingly marked on the left side "PATENTED JAN. 5, 1864."

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1100	550	225

Ballard (Ball & Williams) Military Carbines (Serial numbers 1500-7500, and 8500-10,500)

Overall length 37-1/4"; barrel (bore) length 22"; caliber .44 rimfire. Markings: same as Ballard/Ball & Williams sporting rifles, second type. Additional marks on U.S. War Department purchases include inspector's initials "MM" or "GH" on left side of frame, and "MM" on barrel, breechblock, buttplate, and on left side of buttstock in script within an oval cartouche. Three thousand of the earlier production (serial numbers 1700 through about 5000) of these carbines were sold to the state of Kentucky under an August 1862 contract, extended in April 1863. In November 1863, Kentucky contracted for an additional 1,000 carbines. In the interim, the state of New York purchased 500 for distribution to its militia. The U.S. War Department ordered 5,000 under a contract signed in January of 1864, but Ball & Williams delivered only 1,500 (serial numbers noted in range of 9800 through 10,600) while concentrating production on their more lucrative Kentucky contract. Another 600 of the federal contract were partially inspected (serial numbers about 6500 to 7100-MM in cartouche in stock only) but were rejected because the barrels had been rifled prior to proofing; these were sold to Kentucky in September 1864 on an open market purchase. The carbines marked with federal inspection marks usually bring a premium.

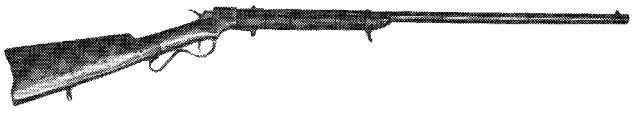
Ballard (Ball & Williams) "Kentucky" Half-Stock Rifles

Overall length 45-3/8"; barrel (bore) length 30"; caliber .44 rimfire. These half-stock rifles bear the standard Ball & Williams markings upon their barrels and in addition have the state ownership mark ("KENTUCKY") on the barrel forward of the rear sights. A total of 1,000 (serial numbers about 7100 through 8550) were contracted for by Kentucky in November 1863 and delivered between January and April 1864.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1900	800	350

Ballard (Ball & Williams) "Kentucky" Full-Stock Rifles

Overall length 45-1/4"; barrel (bore) length 30"; caliber .46 rimfire. Marked on the frame with standard Ball & Williams manufacturer (left), agent (left), and patent (right) markings, these rifles are additionally distinguished by the state ownership mark "KENTUCKY" stamped into the top of the frame near the breech. Kentucky contracted for 3,000 of these arms in November 1863, initially in .56 caliber. However, by mutual consent of the state and the contractors, in February 1864 the caliber of the arms was changed to .46. All deliveries were made in this caliber, beginning in July 1864 and continuing until March 1865 (serial numbers 10,400 to 14,500).

Exc.	V.G.	Good	Fair	Poor
—	—	1750	620	295

Ballard (Dwight, Chapin & Co.) Carbines

Overall length 37-3/4"; barrel (bore) length 22"; caliber .56 rimfire. Markings: On left side of round-topped frame "BALLARD'S PATENT/NOV. 5 1861"; on right side of frame "DWIGHT, CHAPIN & CO./BRIDGEPORT CONN." (through serial no. about 125, deleted after that number) over "MERWIN & BRAY/AGT'S N.Y." over serial no. Inspection letters "D" frequently appear on carbines with the Dwight, Chapin, & Co. markings, indicative of preliminary inspection by E. M. Dustin, of the U.S. Ordnance Department.

Often mistaken as early Ballard production from a fictitious Fall River, Massachusetts factory, these carbines and their complementing rifles were in fact not placed into production until 1863, as evident by the split, two-piece breechblocks. Both carbines and rifles originated from a contract entered into between the U.S. War Department and Merwin & Bray in October 1862 for 10,000 of each arm, subsequently reduced to 1,000 of each by the Commission on Ordnance and Ordnance Stores. Because Ball & Williams facilities were tied up with Kentucky contracts, Merwin & Bray turned to the small parts maker of Dwight, Chapin & Co. in Bridgeport, Connecticut. Although they tooled for production, they fell short of scheduled delivery dates, and although about 100 carbines had been inspected, no deliveries were accepted (due to caliber problems) by the U.S. government, effectively bankrupting Dwight, Chapin & Co. The completed carbines and unfinished parts were sent to Worcester and assembled by Ball & Williams, and Merwin & Bray sold all 1,000 carbines in Kentucky in April 1864 on an open market purchase.

Ballard (Dwight, Chapin & Co.) Full-Stock Rifles

Overall length 53"; barrel (bore) length 30"; caliber .56 rimfire. Markings: same as Dwight, Chapin & Co. carbines, but none found with "DWIGHT, CHAPIN & CO./BRIDGEPORT, CONN." stamping above agents marks. The history of these rifles is the same as the .56 caliber carbines, with serial numbers interspersed in the production of the carbines (1 through 1850). Evidently only about 650 of the rifles were completed of the 1,000 set up. Of these, 35 were sold to a U.S. agent in Florida in February 1864 and 600 to Kentucky in April 1864 with the 1,000 carbines.

Exc.	V.G.	Good	Fair	Poor
—	—	2000	825	350

Ballard (R. Ball) & Co. Sporting Rifles

Overall length varies according to barrel length; barrel (bore) length usually 24", 28", and 30"; calibers .32, .38, .44, and .46 rimfire. Markings: The frame markings of R. Ball & Co. rifles are similar to Ball & Williams production, only eliminating the Ball & Williams marking on the left side. Cartridge size, e.g. "No. 44," usually also stamped upon the top of the barrel or frame. Merwin & Bray's patented alternate ignition device usually present with left side of hammer usually marked "PATENTED JAN. 5, 1864." Serial numbers (which follow in sequence with Ball & Williams production. i.e. after no. about 15,800) appear on top of barrel and top of frame. After William Williams withdrew from the Ball & Williams partnership in mid-1865, the business continued under the name of R. Ball & Co., with Richard Ball's son-in-law, E.J. Halstead, in charge after the former's paralytic stroke in the fall of 1865.

—	—	2200	975	400

Ballard (R. Ball) & Co. Carbines

Overall length 37-1/4"; barrel (bore) length 22" caliber .44 rimfire. Markings: same as R. Ball & Co. sporting rifles; "No. 44" on top of frame near breech. Although firm evidence is elusive, approximately 1,000 of these carbines were manufactured in anticipation of a Canadian contract, which never came to fruition. Serial numbers are interspersed with sporting rifles, in the 16,400 through 17,700 range. All are equipped with the Merwin & Bray dual ignition block.

Exc.	V.G.	Good	Fair	Poor
—	—	1500	580	225

Ballard (Merrimack Arms & Manufacturing Co.) Sporting Rifles

Overall length varies with barrel length; usual barrel lengths 24", 28", 30"; calibers .22, .32, .44, .46, .50 rimfire. Markings: Left side of frame marked with both manufacturing and patent marks, "MERRIMACK ARMS & MFG. CO./NEWBURYPORT, MASS." over "BALLARD'S PATENT/ NOV. 5, 1861." Caliber usually marked on top of barrel or frame, e.g. "No. 38" together with serial no. Left side of hammer marked "PATENTED JAN. 5, 1864" if breech fitted with Merwin & Bray's alternate ignition device. In the spring of 1866, Edward Bray of Brooklyn, New York, and former partner of Joseph Merwin purchased the Ballard machinery from R. Ball & Co. and set up a new plant in Newburyport, Massachusetts primarily for the production of sporting rifles. The glut of surplus arms on the market following the American Civil War, however, forced him into bankruptcy in early 1869, after producing only about 2,000 Ballard rifles, carbines and a limited number of 20 gauge shotguns. Serial numbers continue in the sequence of the Ball & Williams/R. Ball & Co. production (serial numbers about 18,000 through 20,300). Prices of these rifles will vary considerably depending on the degree of finish or engraving.

Exc.	V.G.	Good	Fair	Poor
—	—	1900	775	350

Ballard (Merrimack Arms & Manufacturing Co.) Carbines

Overall length 37-1/4"; barrel (bore) length 22"; caliber .44 rimfire. Markings: same as Merrimack Arms & Mfg. Co. sporting rifles. In March 1866, the state of New York purchased 100 Ballard carbines (serial numbers about 18,500 to 18,600) for use by its prison guards. In January 1870, an additional 70 (serial numbers 19,400 to 19,500) were purchased from New York City arms merchants Merwin, Hulbert & Co. to arm guards at Sing Sing Prison. Between these two purchases Merrimack Arms & Mfg. Co. had shortened its new "tangless" frames by 1/8", the prime distinction between the two purchases. Despite the rarity of both types of carbines, they do not command high prices.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1400	550	300

Ballard (Brown Mfg. Co.) Sporting Rifles

Dimensions: same as Merrimack Arms & Mfg. Co. sporting rifles. Markings: left side of frame marked with manufacturer, "BROWN MFG. CO. NEWBURYPORT, MASS." over patent, "BALLARD'S PATENT/ NOV. 5, 1861." Serial no. on top of barrel and frame. Upon the failure of Merrimack Arms & Manufacturing Company in early 1869, the plant was purchased by John Hamilton Brown, who continued producing Ballard patent rifles until 1873 in a serial range consecutive with that of its three predecessors (Ball & Williams, R. Ball & Co., and Merrimack Arms & Mfg. Co.). Approximately 2,000 Ballard arms were produced during the period of Brown's manufacture of the Ballard (serial numbers about 20,325 through 22,100). Brown made Ballards tend to exhibit finer finishing than earlier produced rifles, accounting for their average higher value. Special features, such as breakdown facility and side extractors (on .22 cal. rifles) will also positively affect the prices.

Courtesy Rock Island Auction Company

—	—	1825	675	350

Ballard (Brown Mfg. Co.) Full-Stock Military Rifles

Overall length 52-1/2" barrel (bore) length 30"; caliber .46 rimfire. Markings: The same as Brown Mfg. Co. sporting rifles, with the addition of the caliber marking, "No. 46," on the top of the barrel forward of the rear sight. The cause for the production of the Ballard/Brown military rifle has yet to be determined, but it has been speculated that they were possibly manufactured in anticipation of a sale to France during the Franco-Prussian War. In any event, the sale was not culminated, and many, if not most, of the estimated 1,000 produced were "sporterized" by shortening the forestock and sold by commercial dealers in the United States. Serial numbers concentrate in the 20,500 through 21,600 range, with sporting rifles interspersed in the sequence. Rifles that have not been sporterized command a premium.

BARRETT, J. B. and A.B. & CO.

Wytheville, Virginia

Barrett Muskets and Rifled Muskets

Overall length 57-3/4"; barrel length 41-1/2" to 42"; caliber .69. Markings: Although the Barretts placed no marks of their own on their alterations, most were effected on Virginia Manufactory muskets, whose lockplates are marked "VIRGINIA/Manufactory" forward of the hammer and "RICHMOND/(date)" on the tail.

For many years collectors considered the adaptations of Hall rifles and carbines from breechloaders to muzzleloaders to be the product of J.B. Barrett & Co. of Wytheville. Recent evidence, however, confirms that those adaptations were actually effected in Danville, Virginia, by another firm (see READ & WATSON). Nevertheless, the Barretts of Wytheville did adapt arms during the early years of the American Civil War. The adaptation, effected almost exclusively upon Virginia Manufactory flintlock muskets, consisted of percussioning by means of the cone-in-barrel and rifling of the barrels with seven narrow grooves. In 1861 and 1862, the Barretts percussioned a total of 1250 muskets, of which 744 were rifled.

SHOTGUNS

Model SL-121 V

This is a semi-automatic 12 gauge with 3" chambers and various barrel lengths and chokes. It has a black anodized alloy receiver and was discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
500	450	400	350	300	150

Model SL 121 Slug

This model is similar to the SL-121 V with a 21" cylinder-bore barrel and rifle sights. It, too, was discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
500	450	400	350	300	150

Model SL-123 V

This model has the improved, fast, third-generation action. Otherwise it resembles the earlier SL-121.

NIB	Exc.	V.G.	Good	Fair	Poor
550	475	425	350	300	150

Model SL 201

This is a 20 gauge with a 26", Improved Cylinder barrel. It is similar in appearance to the SL-123.

NIB	Exc.	V.G.	Good	Fair	Poor
500	475	425	350	300	150

M3 Super 90

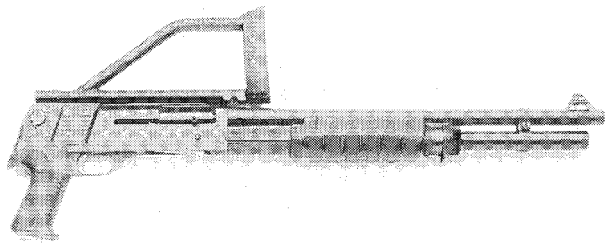
This is an improved version of the Benelli pump action and semi-automatic inertia recoil system. The shotgun can be converted from pump to semi-automatic by turning a spring-loaded ring located at the end of the forearm. It has a rotating bolt system and is chambered for 12 gauge, with a 3" chamber. This model has a 19.75" barrel with cylinder bore and rifle sights with a 7-round tubular magazine. It has a matte black finish and a black fiberglass pistol-grip stock and forearm. This model was introduced in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
1185	900	700	600	450	300

NOTE: Add $50 for open rifle sights.

M3 Super 90 Folding Stock

Same as above but furnished with a folding tubular steel stock.



NIB	Exc.	V.G.	Good	Fair	Poor
2000	1500	1150	850	600	300

M4

Adopted by the U.S. Marine Corps this 12 gauge shotgun features a choice of three modular buttstock and two barrel configurations. Top-mounted Picatinny rail. Barrel length is 18.5". Magazine capacity is 6 rounds. Ghost ring sights. Weight is about 8.4 lbs. Matte black finish. Introduced in 2003. The civilian version does not have a collapsible buttstock.

M4 with non-collapsible stock with cheekpiece

M4 with standard stock

M4 with pistol-grip stock

NIB	Exc.	V.G.	Good	Fair	Poor
1530	1150	—	—	—	—

M1014 Limited Edition

Introduced in 2003 this version of the M4 is fitted with a skelton buttstock and a special U.S. flag engraving on the receiver. Fitted with an 18.5" barrel and Picatinny rail with ghost ring sights. Limited to 2,500 shotguns.

NIB	Exc.	V.G.	Good	Fair	Poor
1600	1200	—	—	—	—

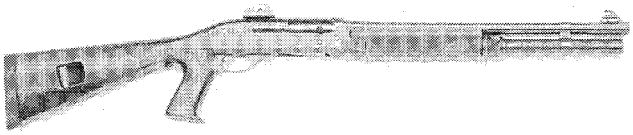
M1 Practical

This model was designed for IPSC events and features an oversized safety, speed loader, larger bolt handle, muzzle-brake, and adjustable ghost ring sight and optics rail. Offered with 26" barrel with extended magazine tube. Weighs about 7.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1150	900	750	500	—	—

M1 Super 90 Tactical

This is a semi-automatic 12 gauge shotgun with an inertia recoil system. It features an 18.5" plain barrel with three screw-in choke tubes. Available in either standard polymer stock or pistol-grip stock. Ghost ring sights are standard. Gun weighs 6.5 lbs. First introduced in 1993.



NIB	Exc.	V.G.	Good	Fair	Poor
900	700	600	500	450	250

M1 Super 90 Slug Gun

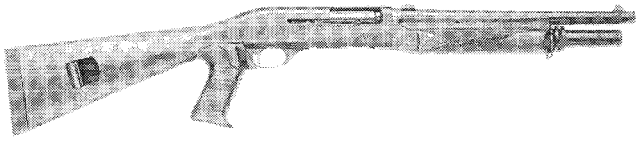
Equipped with a standard black polymer stock with 19.75" plain barrel. Fitted with a 7-shot magazine. Ghost ring sights are an option. Weighs 6.7 lbs. Camo model introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	550	450	350	250

NOTE: Add $100 for Camo model.

M1 Super 90 Entry Gun

This model is fitted with a black polymer pistol-grip stock with 14" plain barrel. Magazine holds 5 shells. Plain or ghost ring sights available. **CAUTION: NFA Weapon, Restricted sale, Class III Transfer required**. Manufacturer's retail price is $900.



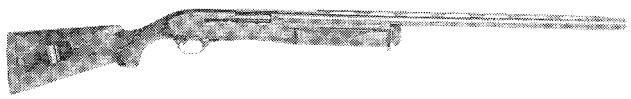
M1 Super 90 Defense Gun

Comes standard with polymer pistol-grip stock, 19.75" barrel, plain sights, or ghost ring sights. Offered in 12 gauge only. Weighs 7.1 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
900	700	600	500	450	250

M1 Super 90 Field

This model is similar to other Super 90 series guns with a 21", 24", 26", or 28" vent rib barrel with screw-in choke tubes. In 1998 this model was available with 24" rifled bore with matte rib. Add $80 for this barrel. Left-hand model added in 2000. In 2001 this model was offered in 20 gauge as well.



NIB	Exc.	V.G.	Good	Fair	Poor
900	650	600	550	450	200

M1 Super 90 Camo Field

Same as above but with camouflage receiver, barrel, buttstock and forearm. Offered in 24", 26", and 28" vent rib barrels. Introduced in 1997. In 1998 this model was also offered with a 21" vent rib barrel. Left-hand model added in 2000. In 2001 this model was offered in 20 gauge as well.

M1 20 gauge

NIB	Exc.	V.G.	Good	Fair	Poor
950	750	700	600	500	400

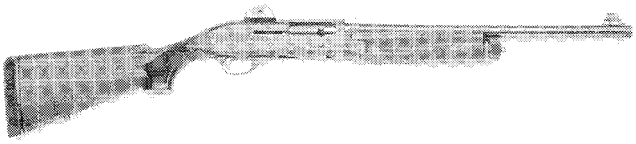
M1 Field Steady Grip

Introduced in 2003 this model features a vertical pistol grip, drilled and tapped receiver and extra Full choke tube. Barrel length is 24". Weight is about 7.3 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1175	900	600	325	175	100

M1 Super 90 Sporting Special

Introduced in 1993 this 12 gauge shotgun is similar to the Super 90 with the addition of non-reflective surfaces, 18.5" plain barrel with 3 choke tubes (IC, Mod, Full). The gun is fitted with ghost ring sights.



NIB	Exc.	V.G.	Good	Fair	Poor
725	600	500	400	350	200

M2 Practical with ComforTech

Introduced in 2005 this model is chambered for the 12 gauge 3" shell and fitted with a 25" plain barrel with compensator and ghost-ring rear sight. Receiver is fitted with a Picatinny rail. Magazine capacity is 8 rounds. Weight is about 7.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1335	1000	750	—	—	—

M2 Tactical

This 12 gauge 3" gun is fitted with a 18.5" barrel with choke tubes and choice of rifle or ghost-ring sights. Pistol grip or extended pistol grip. Black synthetic stock. Magazine capacity is 5 rounds. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	500	—	—	—

NOTE: Add $70 for ComforTech version and $65 for Ghost-ring sights.

M2 Field with ComforTech

In 12 gauge, this model is offered with a 21", 24", 26" or 28" barrel with a black matte synthetic finish or Max-4, Timber or APG camo. The 20 gauge has a 24" or 26" barrel in black, Timber or APG. Average 12 gauge weight is 7 lbs.; average 20 gauge weight is 5.8 lbs. Add $75 for camo.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	500	—	—	—

M2 Field without ComforTech

Same features as above without ComforTech features. Available only in satin walnut with 26" or 28" barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
1075	825	550	—	—	—

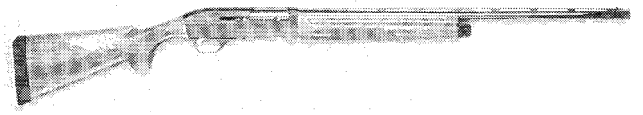
Montefeltro Super 90

Introduced in 1987, this model is similar to the Super 90 Field with a checkered walnut stock and forearm with gloss finish. Offered with 21", 24", 26", or 28" vent rib barrel. Available in 12 gauge only with 3" chambers. This shotgun offered in left-hand model also.

NIB	Exc.	V.G.	Good	Fair	Poor
900	700	600	500	450	350

Montefeltro 20 Gauge

Introduced in 1993, this model features a walnut checkered stock with 26" vent rib barrel. In 1995 a 24" vent rib barrel was offered as well. Gun weighs 5.75 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
900	700	600	500	450	350

NOTE: Add $75 for short stock model.

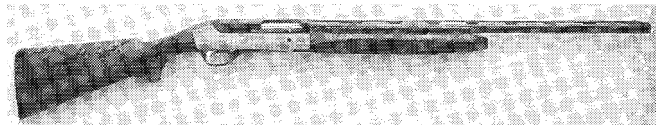
Montefeltro 20 Gauge Camo

Same as above with Realtree Camo finish and offered with 26" vent rib barrel. Introduced in 1998.

NIB	Exc.	V.G.	Good	Fair	Poor
950	750	—	—	—	—

Montefeltro 20 Gauge Limited

Introduced in 1995 this version features a finely etched nickel plate receiver with scroll and game scenes highlighted in gold. The stock is a select grade walnut and is fitted with a 26" vent rib barrel.



NIB	Exc.	V.G.	Good	Fair	Poor
1750	1250	800	500	400	350

Montefeltro (2005)

This is an updated version of the Montefeltro series of guns with a slight change in the receiver, a different trigger, upgraded wood, and the name "Montefeltro" in gold on the receiver. Offered in 12 or 20 gauge with 3" chambers. Checkered select walnut stock with pistol grip. Choice of 24", 26", or 28" vent rib barrel with choke tubes and red bar front sight. Weight for 12 gauge is about 6.9 lbs. and the 20 gauge is about 5.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1070	800	—	—	—	—

SUPER BLACK EAGLE II

This new series of guns was introduced in 2005. Major features are a new butt pad, grip, and cryogenically treated barrels for which specially designed longer choke tubes are required. Benelli offers this series with or without "ComforTech" features. This system reduces recoil up to 48 percent and muzzle climb by 15 percent.

Super Black Eagle II with ComforTech

Offered in 12 gauge with 3.5" chambers. Barrel lengths are 24", 26", or 28" with choke tubes and red bar front sight. Available in synthetic or various camo finishes. Magazine capacity is 3 rounds. Weight is about 7.2 lbs. with 26" barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
1465	1100	700	—	—	—

Super Black Eagle II without ComforTech

This model, without ComforTech, has the same options as the one above with the addition of a walnut stock.

NIB	Exc.	V.G.	Good	Fair	Poor
1355	1000	650	—	—	—

NOTE: Add $60 for walnut stock. Add $110 for camo models.

Super Black Eagle II Rifled Slug with ComforTech

This is a 12 gauge 3" chamber gun with 24" rifled barrel with adjustable sights. Available with synthetic stock or Timber HD camo stock. Weight is about 7.4 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1535	1150	650	—	—	—

NOTE: Add $120 for Camo version.

Super Black Eagle II Turkey Gun

This 12 gauge 3" chamber shotgun (3.5" chambers on non-ComforTech guns) is fitted with 24" smooth bore barrels with choke tubes. Red bar front sight. Weight is about 7.1 lbs. Available with Timber HD camo stock with or without ComforTech.

NIB	Exc.	V.G.	Good	Fair	Poor
1455	1050	600	—	—	—

NOTE: Add $130 for ComforTech version.

Super Black Eagle II Steady Grip

This 12 gauge 3.5" chamber gun is fitted with a 24" barrel with red bar front sight. Choke tubes. Stock is camo with steady grip pistol grip. Weight is about 7.3 lbs. This model comes without ComforTech.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	950	750	600	—	—

Super Black Eagle

This model is similar to the Montefeltro Super 90 Hunter with a polymer or walnut stock and forearm. It is offered with a 24", 26", or 28" vent rib barrel with 5 screw-in choke tubes. Chambered for 12 gauge from 2-3/4" to 3-1/2". It was introduced in 1989. The 24" barrel was introduced in 1993.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	800	750	600	500	400

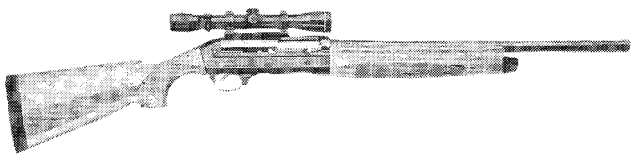
Super Black Eagle Left-Hand

Introduced in 1999 this model is the same as the Black Eagle but in a left-hand version. A Camo version is available.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	950	750	—	—	—

Super Black Eagle Custom Slug Gun

This 12 gauge model has a 24" rifled barrel with 3" chamber. It comes standard with matte metal finish. Gun weighs 7.6 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
1100	800	750	600	500	350

Super Black Eagle Camo Gun

Introduced in 1997 this model features 24", 26", or 28' vent rib barrels chambered for 12 gauge shells. Has a Realtree Xtra Brown Camo finish. Stock is camo polymer as is forearm.

NIB	Exc.	V.G.	Good	Fair	Poor
1300	1000	750	600	500	400

Super Black Eagle Steady Grip

Similar to the model above but equipped with a vertical pistol grip. Drilled and tapped receiver. Extra Full choke tube. Barrel length is 24". Weight is about 7.3 lbs. Introduced in 2003.

NIB	Exc.	V.G.	Good	Fair	Poor
1465	1100	750	—	—	—

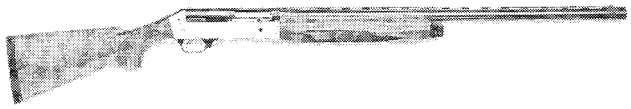
Super Black Eagle Limited Edition

Introduced in 1997 this shotgun features a 26" vent rib barrel, matte metal finish, and satin select grade wood stock. The nickel plated receiver is finely etched with scroll and game scenes. Limited to 1,000 guns.

NIB	Exc.	V.G.	Good	Fair	Poor
2000	1500	1050	—	—	—

Black Eagle Competition Gun

Offered in 12 gauge only this model is fitted with an etched receiver, mid rib bead, competition stock, and 5 screw-in choke tubes. Available in either 26" or 28" vent rib barrel. The upper receiver is steel while the lower receiver is lightweight alloy. Weighs 7.3 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
1300	800	750	700	600	450

Black Eagle

Similar to the Black Eagle Competition Model but with standard grade wood and matte black finish on the receiver. Introduced in 1997.

NIB	Exc.	V.G.	Good	Fair	Poor
900	600	475	325	—	—

Black Eagle Executive Series

Offered in 12 gauge only this is a special order only shotgun. It is offered with a choice of 21", 24", 26", 28" vent rib barrels. Each grade or level of gun is engraved with increasing levels of coverage. The stock is fancy walnut.

Grade I

750	600	450	350	—	—

NOTE: Add $60 for chrome finish.

BENTLEY, DAVID

Birmingham, England

Bentley was a prolific maker of both percussion and cartridge arms between 1845 and 1883. Those arms in cases can be dated by the addresses listed.

New Church Street	1845-1849
55 Hockley Street	1849-1854
5 Lower Loveday Street	1855-1860
61 & 62 Lower Loveday Street	1860-1863
44 Shadwell Street	1863-1871
Tower Works, Aston	1871-1883

BENTLEY, JOSEPH

Birmingham and Liverpool, England

Best known for his transitional and later patented percussion revolvers, Bentley worked at these addresses:

Birmingham	11 Steelhouse Lane	1829-1837
	14 St. Mary's Row	1840-1864
Liverpool	143 Dale Street	1840-1842
	12 South Castle Street	1842-1851
	40 Lime Street & 65 Castle	1852-1857
	65 Castle & 37 Russell Street	1857-1862

Bentley Revolver

A .44 caliber double-action percussion revolver with a 7" barrel and 5-shot cylinder. Blued, case hardened with walnut grips.

BERETTA 70 SERIES

These pistols began production in 1958 replacing Models 1934, 1935, 948, and 949. During the late 1960s several of these models briefly utilized a 100 series designation for the U.S. market. During the latter part of the 1970s a magazine safety was added to the 70 series and the pistols became known as the Model 70S. The 70S designation replaced model designations 70 through 75 making these older model numbers obsolete. Only the Model 76 designation continued.

The 70 Series design included a cross bolt safety, sear block safety, a slide hold-open device, and a push-button magazine release. Shorty after its introduction the cross bolt safety push-button was replaced with a lever-type sear block safety located in the same place.

NOTE: The above information was supplied by contributing editor John Stimson, Jr.

Model 70 (Model 100)

The Model 948 with cross bolt safety, hold-open device, and a push-button magazine release. Fixed sights. There are a number of subvariations available chambered for the .22 LR, .32 ACP, and the .380 ACP cartridges. Available with a 3.5" or 5.9" barrel and has a detachable magazine. Also known as the "Puma" when marketed in the U.S. by J.L. Galef & Sons. It was introduced in 1958 and discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
425	375	300	225	125	85

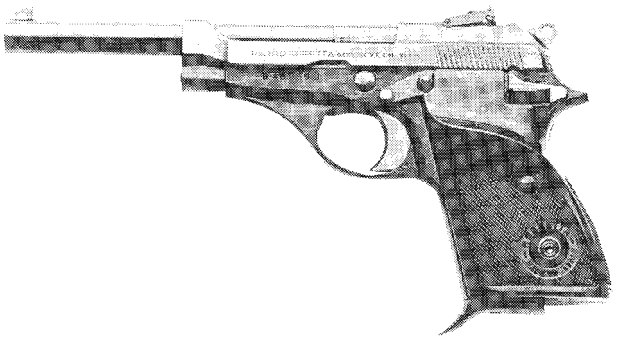
Model 70S

This is an improved Model 70. Chambered for the 7.65 (.32 ACP), 9mm Corto (.380 ACP), and the .22 LR cartridge. Magazine capacity is 7, 8, and 8 rounds respectively.

NIB	Exc.	V.G.	Good	Fair	Poor
425	375	300	225	125	85

Model 71/Jaguar (Model 101)

Similar to above model and chambered for .22 LR cartridge. Magazine capacity is 10 rounds. Frame is alloy and is fitted with a 5.9" barrel. Models imported into the U.S. prior to 1968 were fitted with 3.5" barrels.



NIB	Exc.	V.G.	Good	Fair	Poor
425	375	300	225	125	85

Model 72

This is essentially a Model 71 but sold with two sets of barrels; a 3.5" and 5.9". Fixed sights.

72500	50000	—	—	—	—

SHOTGUNS

Beretta shotguns are marked with a symbol or 0 stamping to indicate the type of fixed choke in the barrel or barrels. Usually this stamping is on the side of the barrel in the rear near the receiver on semi-automatics and near the ejectors on double barrel shotguns. Beretta shotguns with screw-in Mobilchoke tubes will have notches cut in them to indicate the amount of choke placed in the tube.

Fixed Chokes & Beretta Mobilchoke Designations		Mobilechoke Rim Notches

SK	SK (Skeet)	No Notches

The BL series of O/U shotguns were manufactured between 1968 and 1973. They are chambered for 12 or 20 gauge and were offered with 26", 28", or 30" vent ribbed barrels with various choke combinations. They feature boxlock actions and were offered with either single or double triggers, and manual extractors or automatic ejectors. The finishes are blued with checkered walnut stocks. The configurations differ basically in the quality of materials and workmanship and the degree of ornamentation.

471 Silver Hawk

Introduced in 2003, this side-by-side shotgun has a boxlock receiver and is offered in 12 and 20 gauge with a choice of 26" or 28" barrels. This model is also offered with a choice of pistol grip with beavertail forend or straight grip stock with splinter forend. A straight grip stock with case color receiver is also available at a premium. Select walnut stock with oil finish. Single-selective trigger. Weight is about 6.5 lbs. in 12 gauge and 5.9 lbs. in 20 gauge.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
2875	2250	—	—	—	—

NOTE: Add $350 for straight grip stock with case color receiver.

BERETTA "SO" SERIES & OTHER PREMIUM SHOTGUNS

These over-and-under shotguns were fitted with side locks, automatic ejectors, single or double triggers. Barrel ranges in length from 26" to 30" with a wide variety of choke combinations. These guns were introduced in 1948 in 12 gauge only and no longer imported as a production gun in 1986. Many of these SO guns were sold through the firm of Garcia, a sporting goods firm and distributor. The various grades are priced according to quality of wood, finish engraving coverage, and the like. Do not confuse these earlier Beretta shotguns with the present line of premium grade Berettas now being imported into the U.S.

9500	7850	6750	5500	4500

SO-9

This model O/U is Beretta's highest grade. Offered in 12, 20, and 28 gauge, and .410 bore. The true side lock (removable) receiver is highly engraved with scroll or game scenes by Italy's finest craftsmen. Barrel lengths are offered from 26" to 30" with solid hand filed rib. The walnut stock is the finest available

with either pistol grip or straight grip. Stock dimensions to customers request. A custom fitted leather case with accessories is supplied with gun. A custom order gun. An independent appraisal is strongly suggested prior to a sale.

Suggester Retail Price: From $44,500 to $90,000.

Jubilee Field Grade (Giubileo)

This model was introduced in 1998 and is Beretta's finest boxlock over/under shotgun. The model is fitted with sideplates without screws. Offered in 12, 20, 28, and .410 bore with 26" to 30" barrel depending on gauge. Each gun is richly engraved with fine scroll and signed by master engravers. Highly figured walnut with pistol or straight grip. Weights range from about 7 lbs. in 12 gauge to 5.5 lbs. in .410 bore.

BERETTA 682 SERIES

Model 682/682 Gold

This is a high-grade, quality-built O/U shotgun. Offered in 12 and 20 gauge, it is also available in some configurations in 28 gauge and .410 bore with barrel lengths from 26" to 34" depending on the type of shooting required. It is fitted with single-selective trigger and automatic ejectors. Barrels are fitted with ventilated rib and various fixed or screw-in choke combinations are available. The stock is a high-grade walnut with fine checkering in stock dimensions to fit the function of the gun. The frame is silver with light scroll borders on most models. This model covers a wide variety of applications and these are listed by grade and/or function:

NOTE: The Beretta Competition series shotguns have been renamed as of 1994. These shotguns are also referred to as the 682 Gold Competition Series guns, such as Model 682 Gold Trap or Model 682 Gold X Trap Combo and so forth.

682 Super Skeet

This model is offered in 12 gauge only with 28" vent rib barrels choked skeet and skeet. Single-selective trigger and auto ejectors are standard. This Super Skeet features ported barrels and adjustable length of pull and drop. A fitted hard case is standard. Gun weighs 7 lbs. 8 oz.

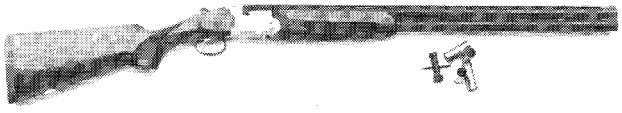
BERETTA 686 SERIES

Model 686/686 Silver Perdiz Sporting

This Beretta O/U shotgun is available in a number of different configurations. This basic model features ventilated rib barrels from 24" to 30"; 30" is a special order. Screw-in chokes or fixed chokes are available. All configurations are offered in 12 gauge and 20 gauge with 28 gauge and .410 bore available in special order only. The gun is fitted with checkered American walnut stock with black rubber recoil pad and special grip cap. Some models have silver receiver with scroll engraving and others have black receivers with gold-filled contours. This 686 series was renamed in 1994.



Model 686 Essential/Silver Essential

Introduced in 1994 this 686 model is designed to be an entry level 686. It offers all of the mechanical features of the 686 series without any of the frills. Offered in 12 gauge only with 26" or 28" barrels with open-side rib. Plain walnut stock with checkering and plain blue receiver. Weighs about 6.7 lbs. Renamed the Silver Essential in 1997.

Beretta 686 Silver Essential w/close-up view of engraving

MODEL AL390/MALLARD SERIES

This series of 12 gauge semi-automatic shotguns features a self-compensating, gas-operating recoil system. All loads from target to 3" Magnums can be used in the same gun. The Field Model features an anodized light alloy receiver with scroll engraving and matte black receiver top. Magazine capacity is 3 rounds. Checkered walnut stock with recoil pad. Available in vent rib barrel lengths from 24" to 30" with 32" on special request. A 22" or 24" slug plain barrel is also available. Chokes are fixed or screw-in at customer's option. Shotgun weighs about 7 lbs. Beginning in 1996 Beretta offered the Silver Mallard shotguns chambered for the 20 gauge shell and available with 24", 26, or 28" barrels. Average weight for these 20 gauge guns is 6.4 lbs.

BERGMANN, THEODOR

Gaggenau, Germany

Theodor Bergmann was a successful industrialist, designer and sometimes inventor with a deep interest in firearms based in Gaggenau, Germany. His first automatic pistol patent dates from 1892, and by 1894 he had prototype pistols, refined with the help of Louis Schmeisser, being evaluated by various governments. When his designs went into commercial production in 1896, however, they were actually manufactured by the firm of V. Charles Schilling in Suhl, the heart of German arms manufacture. Later he licensed manufacture of his "Mars" pistol to Anciens Establishment Pieper ("Bayard"), and after WWI affiliated with the Lignose firm, producing a line of .25 caliber pocket pistols, first under the Bergmann name but later marketed as Lignose. Still later several pistol designs from the August Menz firm were marketed under the "Bergmann Erben" trademark,

though it's doubtful if the Bergmann firm actually had much part in their production or sale.

Model 1894 Bergmann Schmeisser

The Model 1894 was made in prototype form only, with only a few examples surviving and known serial numbers no higher than the mid teens. Most are large framed and chambered for the 8mm Bergmann-Schmeisser cartridge, though at least one was made in 7.5mm Swiss revolver for Swiss army testing and a few very compact versions, with a unique folding trigger, for 5mm Bergmann. Early Bergmann pistols had no extractor, counting on gas pressure to blow the fired (rimless-grooveless) cartridge from the chamber. Too rare to price.

Bergmann Schmeisser

Model 1896, Number 2

The 1896 Number 2 pistols were quite compact and chambered for the 5mm Bergmann cartridge. Early Number 2s also featured a folding trigger and no extractor, but after serial 500 or so reverted to a more conventional in-the-frame trigger and an extractor was added. About 2000 of the later model were produced. Cased sets are known, and add about 50 percent to the value.

Conventional Number 2

Courtesy James Rankin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
3500	3000	2250	1375	800

Model 1896 Number 3

The Number 3 was a larger version of the Number 2, chambered for the 6.5mm Bergmann cartridge. Early examples had a slim gripframe and, up to about serial 800, were made without extractor like the early Number 2s. These bring about a 20 percent premium over the later examples. Number 3 serials range to a little over 4000. Add about 20 percent for dealer markings (usually English), and 50 percent for cased sets. A few target models, with long barrel, adjustable sights and set triggers are known and will bring about three times the price of a standard Number 3.

Holster and Stock Model

Model 1896 No. 3 with accessory holster stock

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
6000	5500	4950	3250	2750

Model 1896 Number 4

The Number 4 is identical to the Number 3 but chambered for a unique 8mm Bergmann cartridge and serialed in the same series with the Number 3. Both the Number 4 and its cartridge are rare; probably fewer than 200 were ever made.

Exc.	V.G.	Good	Fair	Poor
6500	5500	5000	3700	2900

Model 1897 Number 5

The was Bergmann's first attempt at a more powerful arm for the military market, with a unique side-moving locking system and a 10-shot removable box magazine. The 7.8mm cartridge resembled the 7.63mm Mauser, but with a longer neck. Add 60 percent for original metal framed leather holster-stock.

Exc.	V.G.	Good	Fair	Poor
8250	6700	4950	3000	2250

Model 1897 Number 5 Carbine

A limited number of the approximately 1000 Bergmann Model 5s were made with a 12-inch barrel and solid wood detachable buttstock and marked "Karabiner Bergmann" on the action cover. A very few were made with a full-length Mannlicher-type stock and sold as the Bergmann Model 1897/07 Sporting Carbine; these are worth about 50 percent more than the long barreled pistol with detachable stock.

12000	10000	6000	3000	2000

Bergmann Simplex

The Simplex combined some features of the 1896 pistols with improvements developed from the "Mars," resulting in a reasonable compact pocket pistol that came on the market in the early 1900s. It was chambered for the unique Bergmann-Simplex 8mm cartridge, however, and that and competition from better Browning and other designs doomed it to a short production life. Very early examples had checkered wood grips and bring a premium, as do very late examples (above serial 3000) that have the magazine release behind the magazine instead of on the front of the frame.

Exc.	V.G.	Good	Fair	Poor
3250	2800	2000	900	600

Bergmann "Mars"

The Mars was Bergmann's first really successful pistol aimed at the military market. Early examples, about 100 of the total 1000 or so Mars pistols made, were chambered for the 7.63mm Mauser cartridge but later Mars pistols, identified by a large "9mm" on the chamber, were chambered for the special 9mm cartridge that later became known as the 9mm Bergmann-Bayard. The Mars was adopted by the Spanish government in 1905 as their first military automatic pistol, but none were ever delivered by Bergmann. At least two Mars pistols were also made in .45 caliber for U.S. Army trials in 1906, but did not perform well and were dropped from the trials; these are too rare to price.

Exc.	V.G.	Good	Fair	Poor
6000	4900	3850	2500	1650

NOTE: Add 25 percent for a low serial number gun chambered for 7.63mm Mauser; add 50 percent for original Bergmann Mars holster stock.

Bergmann Bayard Model 1908

Shortly after receiving the Spanish contract for the Mars pistol, Bergmann's arrangement with Schilling to produce Bergmann pistols ended. However, he negotiated an arrangement with Anciens Establishment Pieper (Bayard) to produce the Mars and, after some minor modifications, AEP filled the Spanish contract. They also marketed the gun commercially, and later secured a production contract from the Danish army as the Model 1910. Spanish contract (proofed with a small circle divided into three segments) and very early commercial pistols have hard rubber grips that proved very fragile in service; these bring a premium as do original unmodified Danish contract guns (with a contract number and Danish letter D proof).

A few Model 1908 Bergmann Bayards were equipped with leather and wood holster stocks; a complete rig is worth at least twice the price of an unslotted pistol.

Bergmann Post War Pistols

Shortly after WWI ended Bergmann came on the market with a line of .25 caliber pocket pistols; the 2 and 3 were conventional vest pocket designs with a short and long gripframe respectively; the 2a and 3a were identical except for an "Einhand" (one-hand) feature that enabled the user to cycle the slide by pulling the front of the trigger guard with his trigger finger. Soon into production (at about serial 8000) Bergmann affiliated with the Lignose firm and later Model 2 and 3 pistols were marketed under the Lignose name.

Bergmann Erben Pistols

The Bergmann Erben pistols appear to be an attempt by the Bergmann family to keep the Bergmann name associated with firearms without actually investing any design or production effort. The Bergmann Erben pistols were all August Menz designs, and were undoubtedly made by Menz as well. Most noteworthy was the "Spezial" model, a very sophisticated double-action .32 pocket pistol that could be cocked for single-action fire by pulling and then releasing the trigger. Also noteworthy were several compact vest pocket .25s that also bore the Bergmann Erben name.

BERNARDON MARTIN

St. Etienne, France

This small firm was active between 1906 and 1912. The gun designer was Martin and the money man was Bernadon.

1907/8 Model

A 7.65mm caliber semi-automatic pistol. The left side of the slide is marked "Cal. 7.65mm St. Etienne." The trademark "BM" is molded into the grips. Sometimes found with a 32-round horseshoe magazine.

Occasionally the Bernardon Martin pistol will be noted with the word "Hermetic" stamped on the slide in letters that do not match the other markings on the weapon. This was but another name for the Model 1907/8. Guns with this stamping were most likely assembled after the company ceased operations.

Courtesy James Rankin

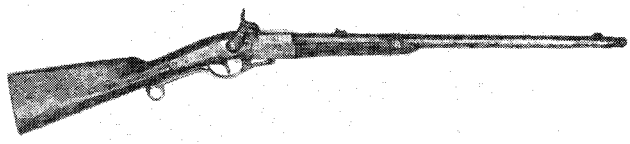
BILHARZ, HALL & CO.

CONFEDERATE CARBINES

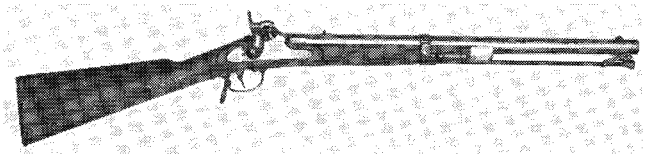
Bilharz, Hall & Co. Breechloading ("Rising Breech") Carbine
Overall length 40"; barrel length 21"; caliber 54. Markings: either "P" or "P/CS" on upper left side of barrel and top of rising breech. The peculiar feature of this carbine is the manner in which the breechblock exposes the chamber. A box-like chamber at the rear of the barrel rises vertically to expose the chamber for a paper cartridge by activating the lever/triggerguard mechanism. Only 100 of this type were delivered to the Confederacy in September 1862. Two types of front sight blades are known, but neither affects the value.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	50000	22500	5000

Bilharz, Hall & Co. Muzzleloading Carbine
Overall length 37-1/2"; barrel length 22"; caliber .58. Markings: "P/CS" on upper left of barrel near breech; "CSA" on top near breech. Modeled after the Springfield U.S. M1855 rifle carbine, the Bilharz, Hall & Co. muzzleloading carbine has often been mistakenly identified as a product of D.C. Hodgkins & Sons of Macon, Georgia. Serial numbers (found internally) belie that identification. Instead these arms are part of deliveries made to Richmond from the middle of 1863 until March 1864. Serial numbers, noted in excess of 700, suggest that about 1,000 were produced. Two basic types, the earlier (through serial number 300) were made with brass nosecaps; the later type (about serial number 310 through at least 710) have pewter nosecaps on the short forestock; neither type affects value.



Exc.	V.G.	Good	Fair	Poor
—	—	25000	10000	3000

BILLINGHURST, WILLIAM
Rochester, New York

Billinghurst originally worked for James and John Miller of Rochester. After James Miller's death in 1837, Billinghurst established his own shop where he produced revolving rifles based upon Miller's 1829 patent. While these arms were originally made with percussion ignition systems (either pill or percussion cap), later examples using self-contained metallic cartridges are sometimes encountered. Billinghurst also estab-

lished a well-deserved reputation for making extremely accurate percussion target pistols and rifles.

W. Billinghurst Under Hammer Pistol

This pistol is somewhat different than most of the under hammers encountered. The barrels are 12" to 18" in length and of a heavy octagonal construction. They are chambered from .30 to .38 caliber and utilize the percussion ignition system. Higher grade versions feature a part-round barrel, and it is important to note that no two pistols are alike. These pistols were furnished with detachable shoulder stocks, and a good many were cased with telescopic sights and false muzzles. This is a high quality weapon; and if encountered with the optional accessories, it would definitely warrant an individual appraisal. This firearm was manufactured in the 1850s and 1860s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4250	1750	800

NOTE: Shoulder stock add 50 percent.

Revolving Rifle

Calibers vary from .40 to .50 with barrels from 24" to 29"; walnut stocks. The barrels marked: "W. Billinghurst, Rochester, N.Y.," or "W. Billinghurst."

BLISS, F. D.

New Haven, Connecticut

Bliss Pocket Revolver

A .25 caliber spur trigger revolver with a 3.25" octagon barrel, 6-shot magazine, and a square butt. Blued with either hard rubber or walnut grips. The barrel is stamped "F.D. Bliss New Haven, Ct." There was an all-brass framed version made early in the production, and this model would be worth approximately 50 percent more than the values listed here for the standard model. Approximately 3,000 manufactured circa 1860 to 1863.

BLUNT & SYMS

New York, New York

Under Hammer Pepperbox

Pepperboxes produced by Blunt & Syms are noteworthy for the fact that they incorporate a ring trigger cocking/revolving mechanism and a concealed under hammer. They were produced in a variety of calibers and the standard finish was blued. Normally these pistols are found marked simply "A-C" on the face of the barrel group. Some examples though are marked "Blunt & Syms New York."

This firm was in business from approximately 1837 to 1855.

BORCHARDT

Berlin, Germany
Waffenfabrik Lowe

Borchardt

A forerunner of the German Luger. The Borchardt was a semi-automatic pistol chambered for the 7.65mm Borchardt cartridge. It was fitted with a 6.5" barrel and the magazine held 8 rounds. The pistol was designed by Hugo Borchardt and manufactured by Ludwig Lowe of Berlin. Later models were manufactured by DWM, Deutsch Waffen Und Munitionsfabriken, Berlin. Most Borchardts come with a case which holds shoulder stock, holster, extra magazines, and numerous other accessories.

BOWEN CLASSIC ARMS CORP.

Louisville, Tennessee

This firm was founded in 1980 by Hamilton Bowen and is a pioneer in the field of fine custom revolvers. The company offers an extensive number of modifications. Bowen Classic Arms only modifies customer's guns, it does not produce its own. Prices listed are for the modifications only on the customer-supplied revolver.

For Bowen Arms not listed, pricing is whatever the market will bear. Bowen Arms are (justifiably) highly valued by their owners.

Nimrod (RS09/RS09S & RS10/RS10S)

This package is performed on the Ruger single-action revolver. It has a 5.5" tapered barrel with integral muzzle band. Baughman ramp-style blade is pinned to the express front sight base. Chambered for .41 or .44 Magnum, .45 Colt, .454 Casull, or the .50 Action Express. Includes steel ejector housing. Also offered in .475 Linebaugh or the .500 Linebaugh. Offered in blue or stainless steel.

NIB	Exc.	V.G.	Good	Fair	Poor
1895	1500	1100	—	—	—

NOTE: Add $500 for stainless steel. Add $200 for blued .475 and .500 Linebaugh, and $500 for these calibers in stainless steel.

Alpine (RD02)

This package is done on the Ruger Redhawk revolver. The action is tuned with hammer nose refitted for maximum firing pin protrusion. Barrel cut to 4". Round butt frame and reshaped factory grips. The cylinder is beveled in the Colt blackpowder style. Fitted with Ashley Emerson sights for an additional $125.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	—	—	—	—

NOTE: Prices listed are for 6-shot Alpines. For 5-shot Alpines add $1,250.

Colt SAA Lightweight (CS02)

This conversion is done on the Colt SAA revolver. An action reliability package is performed. A 4" barrel with dovetail front sight (no 4.75" guns). Lightened/scalloped receiver. Rebluing and recoloring and a blackpowder cylinder chamber.

BRITISH DOUBLES

By Douglas Tate

ENGLISH GUNMAKERS IN NORTH AMERICA

Following is an alphabetic listing of British makers whose guns are most frequently encountered with dealers and at auctions.

Army & Navy Co-operative Society Limited, London

Started in 1871 as an organization by which military men could buy wine wholesale, the membership soon increased to include diplomats and foreign service bureaucrats, while the catalogue expanded to include every manner of household and sporting goods. Most guns were acquired in the Birmingham trade and many were Webley & Scott products.

Boxlock non-ejectors $1,100 to $3,300
Boxlock ejectors $1,700 to $5,500
Sidelock non-ejectors $2,250 to $7,800
Sidelock ejectors $3,300 to $16,000
Hammer Guns $1,100 to $3,300

Atkin, Henry

The first Henry Atkin was one of James Purdey' s original workman, his son started the family business in 1878. J. P. Morgan and Gough Thomas were both Atkin customers because they felt the Atkin's offered the same quality as Purdey's without as high a cost.

Boxlock non-ejectors $1,700 to $4,400
Boxlock ejectors $2,200 to $9,400
Sidelock non-ejectors $2,250 to $11,000
Sidelock ejectors $4,500 to $33,000
Hammer Guns $2,200 to $11,000

Beesley, Frederick

Frederick Beesley served his apprenticeship with Moore and Grey and worked for several London gun makers including James Purdey and Son before establishing his own business in 1879. His claim to fame is the self opening system he patented (No. 31 of 1880) and licensed to James Purdey for "five shillings for every gun made." To this day every side-by-side gun by Purdey is built on this system.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000
Over & Unders $5,000 to $30,000

Blanch, John

John Blanch apprenticed with Jackson Mortimer and married his master's daughter. Later he working with John Manton. Today the Blanch name is perhaps best remembered for *"A Century of Guns"* first published in 1909 and written by H. J. Blanch grandson of the founder.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000

Bland, Thomas

Thomas Bland started in business in 1840 in Birmingham. Bland moved to London in 1875 and occupied a variety of premises close to Charing Cross Station until at least the 1960s. They well known for their wildfowling guns, particularly the "Brent" model which enjoyed a wide following. The Bland firm is still in business in Benton, Pennsylvania.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Boss & Co.

Thomas Boss worked for the great Joseph Manton before becoming a pieceworker to the London trade. In 1891 John Robertson, a Scotsman, was taken in as a partner. Under Robertson's control the firm established itself as London's best gun maker rivaled only by Purdey's. Beyond intrinsic quality Boss is famous for their single trigger and over-and-under designs which are both widely copied. A scarce 20 bore assisted opening over-and-under by Boss sold as Sotheby's, Glen-eagles sale in August 1998 for $76,500.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000
Over & Unders $20,000 to $100,000

Boswell, Charles

Charles Boswell worked for Thomas Gooch and the Enfield factory before establishing himself in 1872. He was a skillful pigeon shot and the firm's reputation rested for many years on their ability to build live bird guns. The records are currently in the hands of G. R. Beckstead in Florida.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Brazier, Joseph
Current Importer/Distributor FNGB, Colorado Springs, CO

Founded in 1831 and best known for high quality locks, receivers, and components supplied to the English gun trade. The majority of Best Guns have used Brazier components. Today, this firm makes close tolerance CNC parts, Best Guns of its own design. Made to order Best sidelock with interchangeable parts begin at $20,000.

Boxlock non-ejectors $2,000 to $3,000
Boxlock ejectors $2,000 to $4,500
Sidelock non-ejectors $20,000 to $25,000
Sidelock ejectors $20,000 to $250,000
Hammer Guns $4,000 to $15,000

Brown, A.A.
Albert Arthur Brown established his business in Whittal St., Birmingham in 1930. The firm has maintained a reputation as one of the finest makers to the trade having built guns for Churchill, H & H and Westley Richards. They still make guns today in Alverchurch, not far from Birmingham.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000

Brown, David McKay
David McKay Brown started his apprenticeship with Alex Martin in Glasgow and completed it with John Dickson in Edinburgh. His renown rest on his ability with traditional Scottish round action guns and his own patent over/under based on a trigger plate action. He works in Bothwell just outside Glasgow. A fine pair of 20 bore assisted opening round action guns by David McKay Brown sold at Sotheby's, Gleneagles sale in August 1998 for $52,200.

Round Action & O/U Guns $20,000 to $100,000

Churchill, E.J.
Edwin John Churchill served his time with William Jeffery & Son and was famous as a pigeon shot. Today the firm is best remembered for its 25" barreled guns introduced by Robert Churchill in the 1920s. The firm is still in business in West Wycombe, England.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000
Over & Unders $10,000 to $50,000

Cogswell & Harrison
Benjamin Cogswell claimed to be in business from 1770. The firm's reputation rests on its self-opening game guns. Today this tradition continues with ex-Purdey craftsman Allen Crewe. building fine Beesley action self-openers and Woodward-style O/U's. They are in Royal Berkshire just west of London.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $30,000
Hammer Guns $1,000 to $3,000
Over & Unders $10,000 to $50,000

Dickson, John
John Dickson served his time with J. Wallace in Edinburgh. In 1882 he registered the first of a series of patents which would culminate in the famous Scottish round action gun. Dickson's continue to build these guns to this day at their Frederick Street premises.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $2,000 to $10,000
Round Action Guns $5,000 to $50,000

Evans, William
William Evans worked for both Purdey and H & H before setting up on his own in 1883. Many of the Evans guns appear to have been made by Webley & Scott and other Birmingham gun makers. Today the firm builds its own guns and is located in St. James, central London.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $50,000
Hammer Guns $1,000 to $3,000

Fraser, Daniel
Daniel Fraser apprenticed with Alexander Henry in Edinburgh before opening his own business on Leith St. He is perhaps best remembered for his rifles and distinctive, fancy back boxlocks. The firm he founded is once again in business in Scotland.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $50,000
Hammer Guns $1,000 to $3,000

Grant, Stephen
Stephen Grant was apprenticed to Kavanagh of Dublin before working with Charles Lancaster and Thomas Boss in London. The firm is perhaps best remembered for its distinctive sidelever guns with fluted fences. The guns are made today in Essendon, Herts, England.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $50,000
Hammer Guns $2,000 to $10,000

Gibbs, George
The Gibbs Company has been in Bristol, England since the 1830s. Though they have built many fine shotguns the name is also strongly associated with rifles. The firm is now owned by Ian Crudgington famous for his book *"The British Shotgun, Vol. I & II."*

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Greener, W.W.
William Greener apprenticed with Burnand of Newcastle before working with John Manton in London. His son, W.W. Greener, took over in 1869 and built his reputation with "a medium-priced weapon of sound workmanship. The name will forever be associated with the "Greener crossbolt." In recent years the company, still based in Birmingham, has built a small quantity of high grade guns.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $50,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $100,000
Hammer Guns $1,000 to $3,000

Hellis, Charles
Charles Hellis was established in 1884 in Westbourne Park, London. The most frequently encountered Hellis guns here in the U.S. are probably the 2" 12 bore and "featherweight" models. Charles Hellis is once again doing business from the west end of London.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000

Henry, Alexander
Alexander Henry has been Edinburg's rifle maker since 1853. Between 1860 and 1882 Henry registered over a dozen patents, mostly for falling block and double rifles. Henry built rifles

for Queen Victoria, her husband Prince Albert and their son The Duke of Edinburg. The name and records were eventually acquired by Alex Martin of Glasgow and now reside with Dickson's in Edinburg.

Boxlock non-ejectors $1,500 to $3,000
Boxlock ejectors $2,000 to $6,000
Sidelock non-ejectors $2,000 to $9,000
Sidelock ejectors $4,000 to $15,000

Holland & Holland

Pair of H&H Royal Deluxe Self-Opening Ejector Guns

Harris Holland started as a tobacconist but moved into guns around 1848. Famous for presentation quality guns built for figures as diverse as President Theodore Roosevelt and The Nizam of Hyderabad, they continue to trade under the auspices of Channel, the well-known French luxury goods company.

Boxlock non-ejectors $1,5000 to $4,000
Boxlock ejectors $2,000 to $9,000
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $100,000
Hammer Guns $2,000 to $10,000
Over & Unders $8,000 to $100,000

Horsley, Thomas

The firm was founded by Thomas Horsley in about 1832 in York, Yorkshire. Famous for their sliding thumb piece toplever hammer guns they are considered by many to be the best of the provincial gun makers. No longer in business.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Horton, William

William Horton was a Burmingham gunmaker who moved to Whitehaven in north-west England before settling in Glasgow in 1863. He died in 1896 but his son Oliver continued registering a series of patents that culminated in the firm's distinctive boxlock gun. Horton was acquired by another Glasgow gunmaker, Arthur Allen, in 1924.

Boxlock non-ejectors $1,500 to $3,000
Boxlock ejectors $2,000 to $6,000
Sidelock non-ejectors $2,000 to $9,000
Sidelock ejectors $4,000 to $15,000

Jeffrey, W.J.

Courtesy Bonhams & Butterfields

William Jackman Jeffery managed Philip Webley's London showroom from 1887 to 1894. The business he established retailed more of the massive .600 double rifles than any other London maker, but these were likely made by Leonard of Birmingham. John Saunders, also of Birmingham, made many of his sidelock ejectors. The company records are with Holland & Holland in London.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Lancaster, Charles

The original Charles Lancaster was a barrel maker for both Joseph Manton and the first James Purdey. In 1878 the business was acquired by A.A. Thorn who established the firm's name with "The Art of Shooting," which ran to at least 14 editions and which he wrote under the pseudonym of "Charles Lancaster." The firm was famous for its four barrel pistols/rifles/shotguns and continues today from Bishopswood, Somerset.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000
Over & Unders $5,000 to $20,000

Lang, Joseph

Joseph Lang worked for Alexander Wilson before starting out on his own in 1821. The firm is best remembered for its "Vena Contracta" gun which had a 12 bore breech that tapered to 16 bore at the muzzle. The company was until recently owned by a Texan but has since returned to England.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $35,000
Hammer Guns $1,000 to $3,000

Lewis, G.E.

George Edward Lewis was born in 1829 and apprenticed in "all branches" of the Birmingham gun trade. His fame rests on his magnum "gun of the period" which was popular with generations of wildfowlers. The firm continues today from Halesowen, West Midlands.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000

MacNaughton & Son

James MacNaughton started in business in 1864 in Edinburgh. His fame rests on his patent Edinburgh round action gun of 1879. The firm is back in business in Edinburgh.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $2,000 to $10,000
Round Action Guns $3,000 to $20,000

Pape, W.R.

William Rochester Pape started his business in 1858 enlarging a game dealership owned by his family. He is credited with the earliest patent for choke boring (1866) and rivals Horsley as the best of the provincial gun makers. A 16 bore Pape, once owned by the Grandson of the firm's founder, sold at Sotheby's, London for $14,904 in March 1999.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $15,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Powell, William
William Powell started out in Birmingham in 1802. Their top "lift uplever" are considered highly desirable. They continue in Birmingham today.

Courtesy Bonhams & Butterfields

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $35,000
Hammer Guns $1,000 to $3,000

Purdey & Son, James
James Purdey, one of Joseph Manton's earliest gun makers, starting in about 1803. The famous Purdey underbolt, developed in 1863 is perhaps the most widely disseminated of all shotgun patents. Today the company is still considered the world's greatest gun makers. A pair of Purdey 16 bore guns, once were owned by Edward VIII when he was Prince of Wales, sold at Sotheby's, Geneva, in 1991 for $196,428.

Boxlock non-ejectors $1,5000 to $4,000
Boxlock ejectors $2,000 to $9,000
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $100,000
Hammer Guns $2,000 to $10,000
Over & Unders $8,000 to $100,000

Richards, William Westley
William Westley Richards founded his own company in 1812 at 82 High St., Birmingham. In 1975 two of the firms workforce developed the famous Anson & Deeley boxlock action which was made hand detachable in 1897. The firm continues in Bournebrook to this day.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000
Over & Unders $10,000 to $100,000

Rigby, John
John Rigby started for himself in Dublin in 1775. The company enjoys a 200-year reputation as fine rifle makers and are famous for their .416 proprietary cartridge. They were recently sold and moved to California.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $35,000
Hammer Guns $2,000 to $10,000

Rosson & Co., C. S.
C. S. Rosson was a provincial maker active from the turn of the century in Norwich. They produced a slide opener, self openers built on the Edwin V. Smith patent and a 2" chambered gun they called the "Twentieth Century." They failed in 1957.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Scott, W & C
William Scott served an apprenticeship with a Bury St. Edmund's gun maker, possibly Ben or Charles Parker. In 1865 the firm contributed to the perfection of the English gun by developing the standard spindle, which connects the Purdey bolt to the top lever. They no longer trade.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Watson Brothers
Watson Brothers date from 1875 and are famous for their small bore guns. In recent years the company has been resuscitated by Mike Louca, who is establishing himself as a builder of round bodied over-and-unders.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000
Over & Unders $30,000 to $100,000

Webley & Scott
Philip Webley began his apprenticeship as a lockmaker in 1827, probably with Ryan & Watson. In 1897 he merged with W. & C. Scott and built semi machine-made shotguns using techniques previously employed on revolvers. The firm ceased operations in 1991.

Boxlock non-ejectors $1,000 to $3,000
Boxlock ejectors $1,500 to $5,000
Sidelock non-ejectors $2,000 to $7,000
Sidelock ejectors $3,000 to $15,000
Hammer Guns $1,000 to $3,000

Wilkes, John
The first John Wilkes was established in Birmingham in 1830. The firm's reputation rests on the intrinsic high quality of their work. They continue on 79 Beak St., London.

New guns built today have interchangeable parts and locks. Special Series over-and-under sidelock guns in 20 gauge only with custom features retail for $28500. Only 25 are to be built.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Boxlock non-ejectors $2,000 to $3,000
Boxlock ejectors $2,000 to $4,500
Sidelock non-ejectors $20,000 to $25,000
Sidelock ejectors $20,000 to $250,000
Hammer Guns $4,000 to $15,000

Woodward, James

James Woodward worked for Charles Moore, becoming a partner before establishing his own company. The firm's reputation rests in large part on its "Automatic" double rifles and to an even greater extent on its over-and-under shotguns, which are the only ones that have ever rivaled Boss's.

Boxlock non-ejectors $1,500 to $4,000
Boxlock ejectors $2,000 to $8,500
Sidelock non-ejectors $2,000 to $10,000
Sidelock ejectors $4,000 to $30,000
Hammer Guns $2,000 to $10,000
Over & Unders $20,000 to $200,000

BRIXIA

Brescia, Italy

Model 12

A commercial version of the Model 1910 Glisenti in 9mm Glisenti caliber. The Brixia was a simplified Glisenti and was made to replace the Glisenti for the military market. The Italian military did not accept them and only a few were made for the commercial market. The only markings are the monogram eagle holding a shield cast in the grips.

Brown Mfg. Co./Merrill Patent Breechloading Rifles

Overall length 54-3/4"; barrel (bore) length 35"; caliber .577. Markings: On breechblock-bolt mechanism, "BROWN MFG. CO. NEWBURYPORT, MASS./PATANTED OCT. 17, 1871." The patent issued to George Merrill in 1871, permitted the Brown Manufacturing Co. to alter probably up to 1,000 English P1853 rifle-muskets to a single-shot breechloading system. The large bolt handle projecting upward at the end of the breech readily distinguishes these arms.

BROWNING ARMS CO.

Morgan, Utah

Contrary to popular belief, the firm of Browning Arms has really manufactured only one gun in its long and colorful history. This was the Model 1878 single-shot rifle, which was actually the first gun that the prolific inventor John M. Browning patented. This firm was founded in 1880 as J. M. Browning & Bro. in Ogden, Utah. John Browning is considered by many to be the greatest firearms genius of all time. He created 80 firearms designs and held 128 individual patents. He sold designs to Winchester, Stevens, Remington, and Colt, as well as to the Belgian firm of Fabrique Nationale (FN). He was directly responsible for designing many of the firearms with which we have come to be familiar, including the 1911 Colt Government Model, the 1885 Winchester Single-Shot (evolved from the Model 1878 that was actually Browning-manufactured), the Models 1886, 1892, 1894, and 1895 Lever Action Rifles, as well as the Model 1897 Shotgun. He was also directly responsible for producing the Model 1935 Hi-Power that achieved worldwide service pistol acceptance. In the 1890s Browning had difficulty dealing with the American arms corporations, so he went to Europe and established a lasting relationship with the firm of Fabrique Nationale in Herstal, Belgium. This agreement lasted until 1977 when FN purchased the Browning Company. In the early 1970s, the Browning corporation contracted with the firm of B. C. Miroku in Japan and has since marketed guns produced by them. In 1991 GIAT, a French state-owned firm, purchased FN and Browning. One should be cognizant of the fact that in the opinion of many experts Miroku-produced Browning firearms are as high in quality as any others produced; collector interest dictates greater values on the Belgian-manufactured versions.

CAUTION

Certain Browning long guns and pistols used wood that was salt-cured, causing a rusting problem to the underside of barrels and actions. This problem occurred from about 1966 to 1972. This should be carefully checked before purchase.

Early Semi-Automatic Pistols

In the period between 1900 and the development of the Model 1935 Hi-Power Pistol, Browning had a number of semi-automatic pistols manufactured by Fabrique Nationale of Herstal, Belgium. They were the Models 1900, 1903, 1905, 1910, 1922, the Baby, and the 1935 Model Hi-Power. These firearms will be listed in more detail with their respective values in the Fabrique Nationale section of this text.

Hi-Power Modern Production

This version of the FN Model 1935 is quite similar in appearance to the original described in the FN section. It is chambered for the 9mm Parabellum cartridge and has a 4.75" barrel. Models built before the passage of the crime bill have a double column, 13-round, detachable box magazine and is blued with checkered walnut grips. It has fixed sights and has been produced in its present configuration since 1954. Add a 10 percent premium for adjustable sights. A matte-nickel version, offered between 1980 and 1984, was also available and would be worth approximately 15 percent additional. This model is also avalable in .40 S&W.

Hi-Power with spur hammer and adjustable sights

Spur Hammer Version

750	500	400	250	200	150

NOTE: Add $60 for adjustable sights.

Hi-Power—.30 Luger

This version is similar to the standard Hi-Power except that it is chambered for the .30 Luger cartridge. There were approximately 1,500 imported between 1986 and 1989. The slide is marked “FN.” The Browning-marked versions are quite rare and worth approximately 30 percent additional.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
800	650	450	300	200

Tangent Sight Model

This version is similar to the standard Hi-Power with the addition of an adjustable rear sight calibrated to 500 meters. There were approximately 7,000 imported between 1965 and 1978.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
950	800	650	450	200

NOTE: If the grip frame is slotted to accept a detachable shoulder stock, add approximately 20 percent to the value; but be wary of fakes. Add an additional 10 percent for “T” series serial numbers.

Renaissance Hi-Power

This is a heavily engraved version with a matte-silver finish. It features synthetic-pearl grips and a gold-plated trigger. Import on this model ended in 1979.

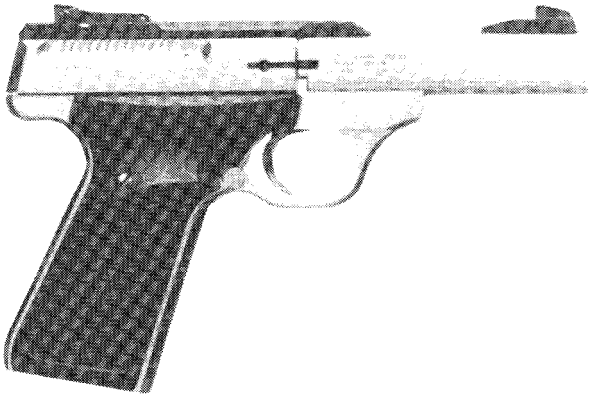
Buck Mark 22 Micro
This version of the Buck Mark 22 is fitted with a 4" bull barrel. Available in blue, matte blue, or nickel finish. Also available in Micro Plus variation with walnut grips. Weighs 32 oz. Introduced in 1992.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
320	250	175	135	110	85

NOTE: Add $25 for stainless steel version introduced in 2005.

Micro Plus

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
325	225	175	150	125	90

Micro Plus Nickel
Introduced in 1996. Add $75 to above price.

Buck Mark 5.5
This .22 caliber pistol has a 5.5" heavy bull barrel fitted with target sights. It is offered in three separate models:

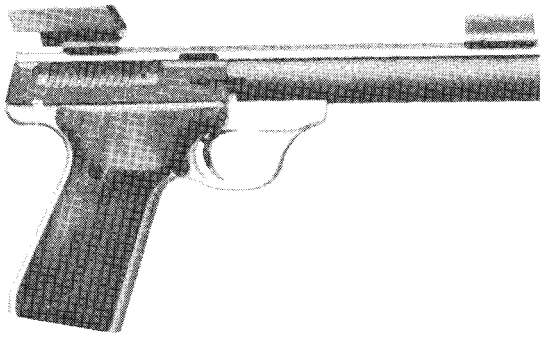
5.5 Blued Target
This version has a blued finish, contoured walnut grips, target sights. Weighs 35.5 oz. Introduced in 1990.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
450	350	250	150	100	100

5.5 Blued Target (2005)
Introduced in 2005 this model features a new target-style Cocabolo grips, a full length scope mount, and hooded target sights. Weight is 35 oz.

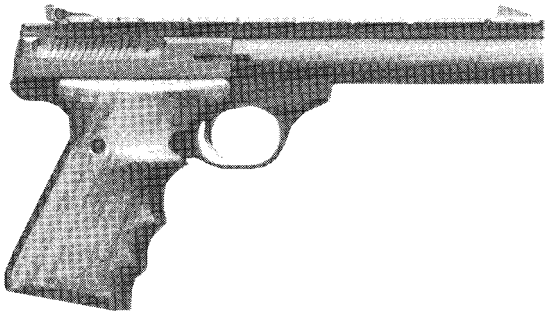
NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
510	400	300	200	150	100

5.5 Gold Target
Same as above but has a gold anodized frame and top rib. Slide is blue. Walnut grips. Introduced in 1991.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
500	400	300	200	150	125

5.5 Field
Same action and barrel as the Target Model but with adjustable field sights. Sights are hoodless. Slide and barrel is blued while the rib and frame are anodized blue. Grips are walnut. Introduced in 1991.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
400	325	225	150	100	100

5.5 Field (2005)
This model features new target style grips and full-length scope rail. Introduced in 2005. Weight is about 35 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
510	400	—	—	—	—

Buck Field Plus
This .22 caliber pistol has a 5.5" barrel with Truglo/Marbles' front sight. Grips are laminated rosewood. Barrel are polished blue. Weight is about 24 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
390	300	225	—	—	—

Buck Mark Bullseye
Introduced in 1996 this pistol is designed for metallic silhouette competition. The fluted barrel is 7-1/4" long. Adjustable trigger pull, adjustable rear sight removable barrel are some of the features. Weight is about 36 oz. Choice of laminated wood grips or rubber grips.

NIB	Exc.	V.G.	Good	Fair	Poor
465	375	225	175	125	75

NOTE: For Rosewood target grips add $90.

Buck Mark Unlimited Match
This pistol is fitted with a 14" barrel with top rib. The front sight hood is slightly rearward of the muzzle for a maximum sight radius of 15". All other features are the same as the Silhouette model. Weighs 64 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
425	325	275	225	175	125

Buck Mark Challenge
Introduced in 1999 this model features a lightweight 5.5" barrel with adjustable rear sight. Smaller grip diameter. Matte blue finish and 10-round magazine capacity. Weight is about 25 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
350	250	200	175	—	—

Buck Mark Camper
This model is fitted with a heavy 5.5" barrel and has a matte blue finish. Ten-round magazine capacity. Weight is about 34 oz. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor
300	225	150	125	—	—

NOTE: Add $60 for stainless steel version.

Buck Mark Camper Cocobola UDX
Similar to above but with cocobolo Ultra DX grips and TruGlo front sight. Introduced 2008.

NIB	Exc.	V.G.	Good	Fair	Poor
360	—	—	—	—	—

Buck Mark Practical URX Fiber Optic
Matte grey finish, 5.5-inch tapered bull barrel, Ultragrip RX ambi grips, adjustable ProTarget rear sight with TruGlo fiber optic front sight. Introduced 2008.

NIB	Exc.	V.G.	Good	Fair	Poor
350	—	—	—	—	—

Buck Mark Hunter
This .22 pistol features a 7.25" heavy round barrel with Truglo/Marbles front sights, adjustable rear sight and integrated

scope base. Grips are Cocabolo target-style. Weight is about 38 oz. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
360	275	225	175	—	—

Buck Mark Limited Edition 25th Anniversary

This model is limited to 1,000 pistols and features a 6.75" barrel with matte blued finish and scrimshaw etched ivory grips. Pistol rug furnished as standard equipment.

NIB	Exc.	V.G.	Good	Fair	Poor
475	350	300	—	—	—

Buck Mark Bullseye Target Stainless

Blowback, single action .22 LR semi-auto. Matte blued, heavy 7.25" round and fluted stainless bull barrel. Laminated rosewood grip, adjustable sights. Introduced 2006. MSRP: $643.

Buck Mark Bullseye Target URX

Blowback, single-action semi-auto in .22LR. Matte blued, heavy 7.25" round and fluted bull barrel. Grooved, rubberized grip, 39 oz., adjustable sights. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
450	—	—	—	—	—

Buck Mark Contour 5.5 URX

Blowback, single-action .222 semi-auto. Matte blued, contoured 5.5" barrel. Full-length scope base, 36 oz., adjustable sights. (Multiple barrel lengths and options.) Introduced 2006.

.22 LR semi-auto. 5.5" stainless bull barrel; 34 oz. Ambidextrous rubberized grip and adjustable sights. (Also available in alloy steel.) Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
380	—	—	—	—	—

CAUTION

Certain Browning long guns used wood that was salt-cured, causing a rusting problem to the underside of barrels and actions. This should be carefully checked before purchase. This problem is most prevalent during the years 1966 to 1972.

SHOTGUNS

SUPERPOSED SHOTGUNS

This series of Over/Under, double-barrel shotguns is chambered for 12, 20, and 28 gauges, as well as the .410 bore and is offered with vent rib barrels from 26.5" to 32" in length. It features various choke combinations. This shotgun is built on a boxlock action and features either double or single-selective triggers and automatic ejectors. There were a number of versions offered that differ in the amount of ornamentation and the quality of the materials and workmanship utilized in manufacture. Values for small-bore models are generally higher. This series was introduced in 1930 and is manufactured by Fabrique Nationale in Belgium. For factory restored guns or very fine non-factory restorations Superposed guns will bring close to factory original prices.

For extra factory installed barrels add $1000 to $2500 depending on the grade of the gun.

PRE-WAR SUPERPOSED, 1930-1940

Browning Superposed shotgun prices are divided into three different categories. The first category is for pre-war guns built from 1930 to 1940. *These pre-war Superposed guns were manufactured in 12 gauge only* from serial number 1 to around 17,000. These shotguns were offered in four different grades: Grade I, Pigeon, Diana, and Midas.

Grade I

Rock Island Auction Company, August, 2004

Exc.	V.G.	Good	Fair	Poor
2250	1750	1000	450	300

Pigeon

Exc.	V.G.	Good	Fair	Poor
3500	2500	1500	500	400

Diana

Exc.	V.G.	Good	Fair	Poor
6000	5200	3000	900	500

Midas

Exc.	V.G.	Good	Fair	Poor
9000	7500	3700	1200	750

NOTE: For twin-single triggers add 15 percent. For vent rib add 10 percent. For recoil pads or shorter than standard stocks deduct 25 percent.

SUPERPOSED FROM 1947-1959

The second category of Superposed was produced and sold from 1947 to 1959. These were built in 12 and 20 gauge as well as the 28 gauge and .410 bore which were introduced in 1959. These shotguns were graded using a Roman numeral system instead of names. They are: Grade I, Grade II, Grade III, Grade IV, Grade V, and Grade VI. The values listed are for 12 gauge. Add the premium or deductions as listed. The number of 28 gauge and .410 bore guns sold in late 1959 number less than 100.

NOTE: The number of Grade VIs sold in North America is unknown, but it was most likely very small. This is a very rare grade. Proceed with caution.

Grade I

Marked Lightning on frame.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
3000	2000	1100	900	300	250

Grade II

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
4500	3300	2100	1200	600	375

Grade III

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
5750	5000	3500	2200	750	450

Grade IV

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
8500	7500	4000	2400	1200	550

Grade V

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
7500	6000	3800	2400	1200	650

Grade VI

Built 1957 through 1959 only.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
13000	11000	7000	4000	2200	850

NOTE: 20 gauge add 45 percent. 28 gauge add 90 percent (1959 only). 410 add 45 percent (1959 only). Trap deduct 40 percent. Standard weight 12 gauge Grade I deduct 10 percent.

SUPERPOSED FROM 1960-1976

Browning Superposed shotguns built from 1960 to 1976 revert back to the older grade names. They are Grade I, Pigeon, Pointer, Diana, and Midas. These shotguns were available in 12, 20, and 28 gauge as well as .410 bore. This last production period is a little more complicated due to manufacturing changes that some collectors consider important such as round knobs, long tangs.

Prices listed reflect Superposed field guns produced from 1960 to 1965 in round pistol grip knob with long trigger guard tang in 12 gauge. For all other variations during this period one should consider:

For salt wood damage deduct a minimum of 60 percent. For round knob short tang (circa 1966-1969) deduct 50 percent. For flat knob short tang (circa 1969-1971) deduct 50 percent. For flat knob long tang (circa 1971-1976) deduct 25 percent. For New Style Skeet and Lightning Trap (recoil pad, flat knob, full beavertail forearm) with long trigger guard tang (1971-1976) deduct 35 percent; with short trigger guard tang deduct 40 percent; if Broadway rib deduct an additional 10 percent. For skeet chokes on field guns deduct 5 percent. For recoil pads on 2-3/4" chambered field guns deduct 20 percent. For Master engraver signed guns (Funken, Watrin, Vrancken) add 10 percent. For Standard weight Grade I guns deduct 10 percent. For shorter than standard stock length deduct 25 percent. For barrel lengths of 32" add 10 percent. For 20 gauge add 50 percent. For 28 gauge add 100 percent. For .410 bore add 35 percent.

Grade I

Lightning marked on frame.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
3000	2250	1200	700	500	250

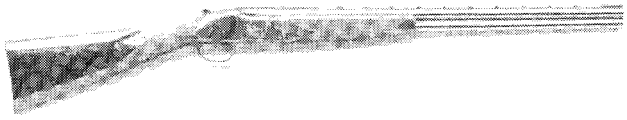
11000	10000	8000	7000	5000	4000

Comment: FN also built Exhibition Grades that were sold in this country under the Browning name. Collectors consider a true Exhibition Grade as one not having a "C" prefix in the serial number. These particular guns are considered quite desirable and should be appraised on an individual basis. Superposed in this catageory can range in price from $10,000 to $20,000 depending on gauge, engraving coverage, and options.

The second type of Exhibition Grade is know as the "C" type that was first sold in the United States from about 1973 to 1977 and is so called because of the "C" prefix in the serial number. There were about 225 of these guns sold in the United States. They came in quite a few grades and some were specially ordered. Although the lower grades are not considered by some to be true exhibitions (pre-C series) the highest "C" series grades are a match to the best of the older exhibitions. In 2000, an all option Superlight 2 barrel set with sideplates engraved by Vranken sold for $22,000. Generally, depending on the gun, prices will range between $6,000 and $25,000. These "C" grade guns should also be appraised individually.

SUPERPOSED SUPERLIGHT



This model was first introduced in 1967 in 12 gauge and in 1969 in 20 gauge. Special order 28 gauge as well as .410 bore are also seen. It was offered in 26.5" barrel lengths with 27.5" barrls in 12 gauge and 28" barrels in smaller bores available on special order. It features a rounded frame and straight grip stock with tapered solid or vent rib barrels. Regular production on the Superlight ended in 1976 for the grades listed. Production did continue for the Superlight in the P series begun in 1977.

Grade I

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*

Diana Grade

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
9000	7000	4700	2500	1500	850

Midas Grade

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
11000	9000	6500	3700	2000	1000

NOTE: For 20 gauge guns add a 50 percent premium. For 28 gauge guns add a 100 percent premium. For .410 bore guns add 30 percent premium for high grades guns and 30 percent for Grade I.

SUPERPOSED PRESENTATION GRADE SERIES

The superposed shotguns listed were manufactured between 1977 and 1984 by FN in Belgium. The models listed differ in the amount of ornamentation and the quality of materials and workmanship utilized in construction. This series was also available in a superlight configuration.

NOTE: Due to the tremendous variation of P-Series guns, prices here reflect the Superlight configuration. An all option superlight with a checkered butt, oil finish, and three piece forend will bring 25-30 percent more. For all other variations one should consider:

For trap guns deduct 35 percent. For new style skeet deduct 30 percent. For skeet choked field guns deduct 5 percent. For recoil pads on field guns deduct 30 percent. For flat knob long tang hunting guns with no options deduct 35 percent. For flat knob long tang hunting guns with all options add 25 percent. For guns signed by J. Baerten add 5 percent. For P-4V guns with no gold deduct 20 percent. For hand filed vent rib add 5 percent.

For Presentation Grade guns with extra sets of barrels add approximately $1,500 to $2,500 depending on gauge and combination.

For P1, P2, and P3 grades add the premium listed:
For 20 gauge guns—55 percent.
For .28 gauge guns—100 percent.
For .410 bore—30 percent.

For the P4 grade add the premium listed:
For 20 gauge guns—55 percent.
For 28 gauge guns—100 percent.
For .410 bore—40 percent.

Bicentennial Model

Produced in 1976 to commemorate the 200 year anniversary of America. A total of 53 guns were built in this special edition. All of these Superposed were 12 gauge with 28" barrels and each was numbered for one of the fifty states plus the District of Columbia. Two additional guns were built for the Smithsonian Institution and the Liege Firearms Museum. All were fitted with side plates with gold inlays. To reflect true value guns must be in unfired condition in their original case with all the papers.

10000	8000	5500	2750	1500	1000

NOTE: Price often depends on the state.

FN/Browning Superposed

A number of FN Browning Superposed B-25 shotguns were imported into this country by Browning in various grades. These Superposed were intended originally for FN's European market. There are a large number of variations and grades. It is strongly suggested that an expert appraisal be sought prior to the sale. As a general rule these prices for NIB guns are: A grade-$1,200-1,600; B grade $1,600-2,500; C grade $2,500-3,500; D grade $3,500-5,000. These guns are marked with both the Browning and FN barrel address.

Classic

Produced in 1986 this model was offered in 20 gauge with 26" barrels. About 2,500 guns were produced. Silver gray receiver with engraving.

Liege

This is an Over/Under shotgun chambered for 12 gauge. It was offered with 26.5", 28", or 30" vent rib barrels with various choke combinations. It features a boxlock action with a nonselective single trigger and automatic ejectors. The finish is blued with a checkered walnut stock. There were approximately 10,000 manufactured between 1973 and 1975. U.S. versions were marked Browning Arms Company on the barrel.

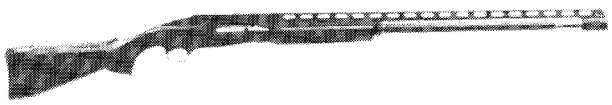
2375	1900	1350	—	—	—

Recoilless Trap

First introduced in 1993 this model features an advanced design that eliminates recoil up to 72 percent. The receiver is a special bolt-action single-shot. Receiver is black anodized. It is fitted with an adjustable ventilated rib so the point of impact can be moved. Adjustable length of pull. The Standard Model is a 12 gauge with 30" barrel while the Micro Model is fitted with

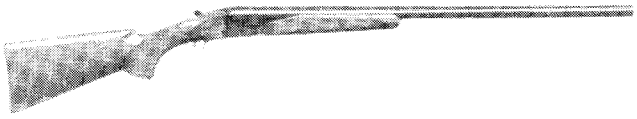
27" barrels. Choke tubes are supplied. Standard Model weighs 9 lbs. 1 oz., while the Micro Model weighs 8 lbs. 10 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
1500	1300	900	700	500	350

BSS

This is a side-by-side, double-barrel shotgun chambered for 12 or 20 gauge. It was offered with a 26", 28", or 30" barrel with various choke combinations. It features a boxlock action and automatic ejectors. Early guns had a nonselective single trigger; late production, a selective trigger. The finish is blued with a checkered walnut stock and beavertail forearm. It was manufactured between 1978 and 1987 by B.C. Miroku.

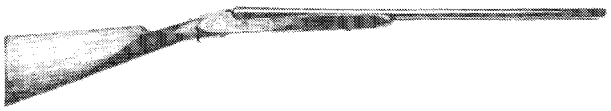


Exc.	V.G.	Good	Fair	Poor
1400	1050	775	650	400

NOTE: Single-selective trigger add 20 percent. 20 gauge add 20 percent.

BSS Sporter

This version features an English-style, straight-grip stock and a splinter forearm. The stock was oil-finished. It was offered with a 26" or 28" barrel.



Exc.	V.G.	Good	Fair	Poor
1200	950	775	650	400

NOTE: For 20 gauge add 20 percent.

BSS Grade II

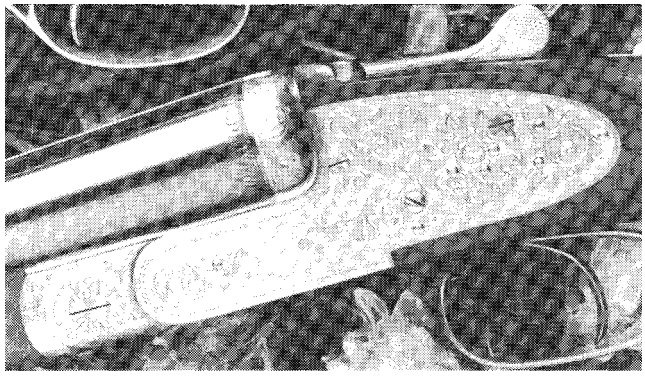
This version features game scene engraving and a satin, coin finished receiver. It was discontinued in 1984.

Exc.	V.G.	Good	Fair	Poor
1750	1350	1100	850	500

BSS Sidelock

This version features an engraved sidelock action and was offered in 12 or 20 gauge. It was offered with a 26" or 28" barrel and has a straight-grip stock and splintered forearm. It was manufactured in Korea between 1983 and 1987.

NOTE: The last few dozen 12 gauge sidelocks produced were an uncatalogued version of earlier guns. These guns had very finely engraved game scenes with English scroll. Add a 30 percent premium for this variation.



NIB	Exc.	V.G.	Good	Fair	Poor
2750	2100	1600	1250	800	500

NOTE: Add 30 percent to above prices for 20 gauge guns.

CYNERGY SERIES

This series was introduced in 2004. Browning calls it the third generation over-and-under gun. The Cynergy has a number of new design features such as a monolock hinge system for a lower profile, an inflex recoil pad, a new mechanical trigger system, an adjustable comb, back-bored barrels, and impact ejectors.

Cynergy Field

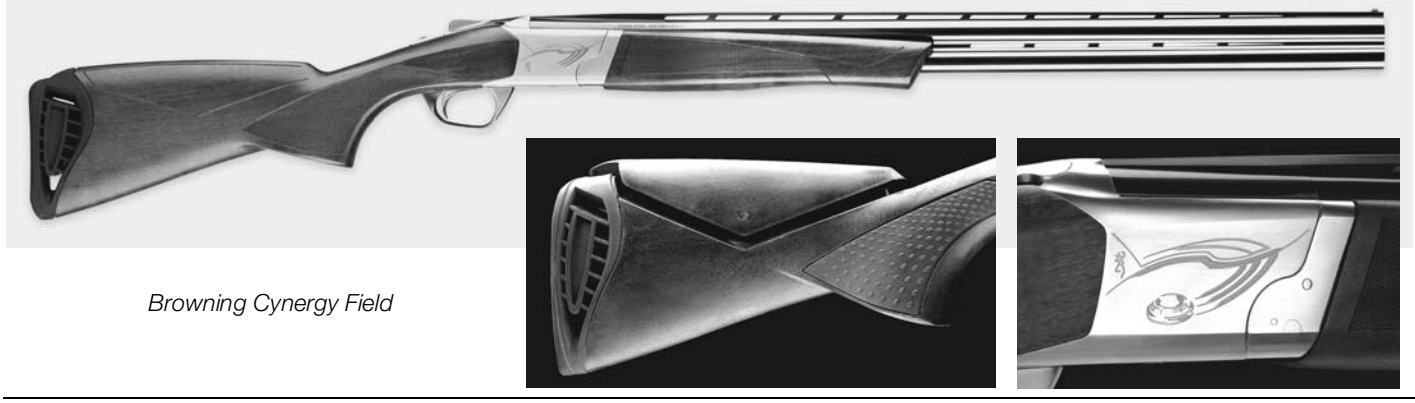
This 12 gauge 3" model features a checkered walnut stock and forearm. Silver nitrate receiver with engraving. Choice of 26" or 28" vent rib barrels with choke tubes. Weight is about 7.75 lbs. A synthetic stock with adjustable comb is also offered.

NIB	Exc.	V.G.	Good	Fair	Poor
2050	1500	—	—	—	—

NOTE: Deduct $40 for synthetic stock.

Cynergy Classic Field

This more traditionally styled 12 gauge was added to the Cynergy line in 2006. It features a steel receiver with silver nitride finish and game bird scenes on each side. Satin finish walnut stock and Schnabel style forend. Three choke tubes. Available in barrel lengths of 26" and 28" with an average weight of 7.75 lbs.



Browning Cynergy Field

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

NIB	Exc.	V.G.	Good	Fair	Poor
2150	—	—	—	—	—

Cynergy Field Small Gauge

Introduced in 2005 this model is chambered for the 20 or 28 gauge. Choice of 26" or 28" vent rib barrels. Weight is about 6.25 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
2060	1600	—	—	—	—

Cynergy Sporting

As above but with higher grade walnut stock and choice of 28", 30", or 32" vent rib barrels with choke tubes. Ported barrels. Hi-Viz front sight. Weight is about 8 lbs. A synthetic stock with adjustable comb is also offered.

NIB	Exc.	V.G.	Good	Fair	Poor
2690	2100	—	—	—	—

NOTE: For synthetic stock deduct $40.

Cynergy Classic Sporting

New for 2006, this traditionally styled version of the Cynergy Sporting is available in 12 gauge with 28", 30" or 32" ported barrels. Oil finish walnut stock with Schnabel forend and Browning logo on steel receiver with silver nitride finish. Three Invector-Plus Midas Grade choke tubes. Average weight 7.75 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
2500	—	—	—	—	—

Cynergy Sporting, Adjustable Comb

Similar to Cynergy Sporting but with a comb adjustable for cast and drop. Average weight 8.2 lbs. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
2800	—	—	—	—	—

Cynergy Sporting Small Gauge

As above but in 20" or 28" gauge. Choice of 28", 30", or 32" ported barrels in 20 gauge and 28" or 30" ported barrels in 28 gauge. Weight is about 6.25 to 6.5 lbs. depending on barrel length. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
3080	2300	—	—	—	—

Cynergy Feather

This lightweight Cynergy 12 gauge was introduced in 2006, followed by 20 and 28 gauge and .410 bore versions in 2008. Satin finish walnut stock. Weight is about 6.5 lbs. in 12 gauge and about 5 lbs. in others.

NIB	Exc.	V.G.	Good	Fair	Poor
2400	—	—	—	—	—

Cynergy Feather Composite

As above but with synthetic stock and forend in 12 gauge only. MSRP:

5000	—	—	—	—	—

AUTO-5 SHOTGUN

Early Production Auto-5

This series of recoil-operated, semi-automatic shotguns was designed by John M. Browning and was offered in 12 or 16 gauge. The barrel lengths were 26", 28", 30", or 32" with various chokes and ribs. It has a unique, square-back action that has become instantly recognizable. The finish is blued with a checkered, walnut, round-knob stock. The various versions differ in the amount of ornamentation, type of rib, and quality of materials and workmanship utilized in construction. This series was manufactured in Belgium by FN between 1903 and 1939. The first example appeared in the United States in 1923. Pre-WWI 16 gauge guns, introduced in 1936, had 2-9/16" chambers; early models should be inspected by a qualified gunsmith before firing.

NOTE: For 16 gauge not converted to 2-3/4" chamber deduct 30 percent. Grade III or Grade IV prices are not nearly as affected by chamber length because of their rarity. Original pre-war barrels were serial numbered to the gun. For extra barrels serial numbered to the gun add $100 for plain barrels, $200 for matte rib barrels, $275 for vent rib barrels. For extra barrels on Grade IV guns add an additional 30 percent to these barrel prices. Prices given are for guns with original barrels serial

numbered to the gun. Remember the safety is located in front of the trigger guard. Deduct 10 to 25 percent for "suicide safety" in trigger guard.

Browning Grade IV Courtesy Amoskeag Auction Company

American Browning Auto-5

This recoil-operated, semi-automatic shotgun was another variation of the early-production Auto-5. It was chambered for 12, 16, or 20 gauge and was manufactured by the Remington Company for Browning. It is quite similar to Remington's Model 11 shotgun but features the Browning logo and a different type of engraving. There were approximately 45,000 manufactured between 1940 and 1942.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
675	575	450	375	200

NOTE: Vent rib add 20 percent. 20 gauge add 10 percent.

MID-PRODUCTION AUTO-5—FN MANUFACTURE STANDARD WEIGHT

This version of the recoil-operated, semi-automatic Auto-5 shotgun was manufactured by FN in Belgium between 1952 and 1976. It was offered in 12 or 16 gauge with 26" through 32" barrels with various chokes. The finish is blued with a checkered walnut stock and a black buttplate that was marked "Browning Automatic" with "FN" in center oval. Guns made prior to 1967 will be found with round knob pistol grips. The flat-bottom variation was introduced in 1967.

NOTE: Add 25 percent for guns with round-knob pistol grip and 35 percent for straight-grip stock. Add 20 percent for 20 gauge guns. Add 40 percent for 16 and 20 gauge guns NIB.

Auto-5 Lightweight

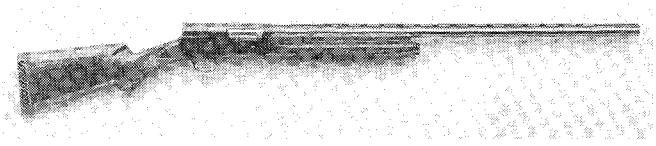
This version was chambered for 12 or 20 gauge and featured a lighter-weight, scroll-engraved receiver. It was manufactured between 1952 and 1976 by FN. The 20 gauge was not introduced until 1958.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
895	750	600	450	275	200

NOTE: Vent rib add 20 percent. For 20 gauge add 20 percent.

Auto-5 Magnum

This version featured 3" chambers and was offered with 26" through 32", full-choke barrels. It was manufactured between 1958 and 1976 by FN. The 12 gauge was introduced in 1958 and the 20 gauge brought out in 1967.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
950	750	550	375	200

NOTE: Vent rib add 20 percent. Add 10 to 15 percent for 20 ga.

Auto-5 Skeet

This version is similar to the Lightweight Model, chambered for 12 or 20 gauge with a 26" or 28", vent rib, skeet-choked barrel.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
795	575	525	425	250

Auto-5 Trap Model

This version is similar to the standard-weight model except chambered for 12 gauge only, with a 30", vent rib, full-choke barrel. It was manufactured by FN until 1971.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
675	550	475	300	225

Sweet Sixteen

This version is similar to the standard-weight and is chambered for 16 gauge only. It has a gold-plated trigger and was manufactured by FN between 1936 and 1976.

NOTE: Not all A-5 16-gauges are Sweet Sixteens. Look for the gold-plated trigger, "Sweet Sixteen" script, and the lack of a suicide safety.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1500	950	700	400	300	200

NOTE: Matte rib add 25 percent. Vent rib add 50 percent.

Buck Special

This version features a 24", cylinder-bore barrel with adjustable rifle sights. It was produced in 12 and 20 gauge 2-3/4" and 3" Magnum, and in 16 gauge with 2-3/4" chambers. It was manufactured by FN between 1963 and 1976. Prices are for 12 gauge guns.

Exc.	V.G.	Good	Fair	Poor
750	650	525	400	275

Two Millionth Commemorative

This version commemorated the two millionth Auto-5 shotgun produced by FN. It was engraved with a special high-polish blue finish and high-grade, checkered walnut in the stock. It was furnished in a black fitted case along with a book on the Browning Company. There were 2,500 manufactured between 1971 and 1974. As with all commemoratives, it must be NIB to realize its top potential.

NIB	Exc.	V.G.	Good	Fair	Poor
3000	1850	950	625	—	—

LATE PRODUCTION AUTO-5—B.C. MIROKU MANUFACTURE

In 1976 production of the Auto-5 shotgun was begun by B.C. Miroku in Japan. This move was accomplished after approximately 2,750,000 Auto-5 shotguns were manufactured by FN in Belgium between 1903 and 1976. The Japanese-manufactured guns, in the opinion of many knowledgeable people, show no less quality or functionality but are simply not as desirable from a collector's standpoint. In 1999 Browning discontinued production of the Auto-5 shotgun. Note: Since the discontinuance of the Auto-5, values for Japanese examples have risen, approaching those of Belgian guns.

Auto-5 Light 12

This version is chambered for 12 gauge 2-3/4" chamber only and is offered with a lightweight receiver. The barrel has a vent rib and choke tubes. It was introduced in 1975.

NIB	Exc.	V.G.	Good	Fair	Poor
750	650	500	400	350	250

Auto-5 Light 20

A-5 DU 50th Anniversary

This was a high-grade version of the Auto-5 produced to commemorate the 50th anniversary of Ducks Unlimited. It is highly engraved and features high-gloss bluing and a fancy checkered walnut stock. There were approximately 5,500 manufactured by Miroku in 1987. They were auctioned by the Ducks Unlimited chapters to raise money for the organization, and because of this fact, it is difficult to furnish an accurate value. This is a commemorative firearm and, as such, must be NIB with all furnished materials to command premium collector value. We furnish what we feel is a general value.

Auto-5 Final Tribute Limited Edition

Introduced in 1999, this commemorative A-5 is limited to 1,000 shotguns. It represents the final production of this model. Chambered for the 12 gauge shell and fitted with a 28" vent rib barrel this shotgun has a special engraved receiver.

NIB	Exc.	V.G.	Good	Fair	Poor
4000	2750	—	—	—	—

Double Automatic Shotgun

This is a short recoil-operated, semi-automatic shotgun chambered for 12 gauge only. It was offered with a 26", 28", or 30" barrel that was either plain or vent ribbed. It has various chokes. The receiver is steel, and the finish is blued or silver with a checkered walnut stock. The tubular magazine holds only two shots—hence its name. It was manufactured between 1954 and 1972.

Exc.	V.G.	Good	Fair	Poor
525	425	350	275	225

NOTE: Vent rib add 25 percent.

Twelvette Double Auto

This version is similar to the Double Automatic except that it has an aircraft aluminum alloy frame color-anodized in either blue, silver, green, brown, or black. Red-, gold-, or royal blue-colored receivers were the rarest colors and would command approximately a 50 to 75 percent premium. It was offered with either a plain or vent rib barrel. There were approximately 65,000 produced between 1954 and 1972.

Exc.	V.G.	Good	Fair	Poor
675	525	350	275	225

NOTE: Vent rib add 25 percent.

Twentyweight Double Auto

This version is similar in all respects to the Twelvette except that it is three-quarters of a pound lighter and was offered with a 26.5" barrel. It was manufactured between 1952 and 1971.

Exc.	V.G.	Good	Fair	Poor
750	575	375	300	250

NOTE: Vent rib add 25 percent.

2000 SERIES

B-2000

This is a gas-operated, semi-automatic shotgun chambered for 12 or 20 gauge and offered with a 26", 28", or 30", vent rib barrel with various chokes. The finish is blued with a checkered walnut stock. This shotgun was assembled in Portugal from parts that were manufactured by FN in Belgium. There were approximately 115,000 imported between 1974 and 1981.

500 SERIES

A-500G/A-500R

This is a self-adjusting, gas-operated, semi-automatic shotgun chambered for 12 gauge only. It is offered with 26", 28", or 30" barrels with a vent rib and screw-in Invector choke tubes. It has 3" chambers and can fire any load interchangeably. The finish is blued with a checkered walnut stock and recoil pad. It features light engraving. It was introduced in 1987. At this time (2008) the recoil version (A-500R) has a slightly better reputation for functioning than the gas-operated A-500G, but values are roughly similar.

NIB	Exc.	V.G.	Good	Fair	Poor
560	490	425	350	275	225

A-500G Sporting Clays

This gas-operated version is designed for sporting clays and features a choice of 28" or 30" vent rib barrel with semi-gloss finish with gold lettering “Sporting Clays.” Ventilated recoil pad standard. Weighs about 8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
520	425	350	300	200	150

A-500R Hunting Model

Similar in appearance to the A-500G with the exception that this model operates on a short recoil design. The buttstock features a full pistol grip. Available with 26", 28", or 30" vent rib barrels. Choke tubes standard. Weighs about 7 lbs. 13 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
475	385	300	250	200	150

A-500R Buck Special

Same as Hunting Model with the addition of adjustable rear sight and contoured front ramp sight with gold bead. Choke tubes standard, as is 24" barrel. Weighs 7 lbs. 11 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
500	425	350	300	225	150

SILVER SERIES

This value-priced series of gas-operated autoloaders was introduced in 2006. All models feature a semi-humpback design and aluminum alloy receiver. Weights vary from 7.25 to 7.5 lbs. depending on barrel length and stock material. Three choke tubes provided with all models.

Silver Hunter

This version features a satin finish walnut stock and forend. It is available with a 3" chamber in 26", 28" and 30" barrel lengths or with a 3.5" chamber in 26" or 28" barrel length. Add 15 percent for 3.5" chamber. A 20 gauge version with 26" or 28" barrel became available in 2008.

NIB	Exc.	V.G.	Good	Fair	Poor
825	—	—	—	—	—

Silver Stalker

NOTE: For Invector rifled choke tube model deduct $50.

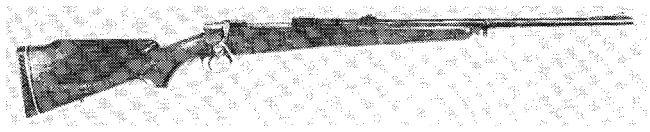
RIFLES

High-Power Bolt-Action Rifle

This was a high-grade, bolt-action sporting rifle manufactured by FN in Belgium (from 1959 to 1975) or Sako of Finland (from 1961 to 1975). It was built on either a Mauser or a Sako action and chambered for a number of popular calibers from the .222 Remington up to the .458 Winchester Magnum. There were three basic grades that differed in the amount of ornamentation and the quality of materials and workmanship utilized. Certain calibers are considered to be rare and will bring a premium from collectors of this firearm. We recommend securing a qualified appraisal on these rifles if a transaction is contemplated. We furnish general values only.

NOTE: From 1959 through 1966 FN Mauser actions with long extractors were featured. These Mauser actions will bring a premium depending on caliber. From 1967 on, FN Supreme actions with short extractors were used. *Only* .30-06 and .270 calibers continued with long extractor Mauser actions.

CAUTION: For buyer and seller alike some rare calibers may be worth as much as 100 percent or more over prices listed for rare calibers such as .284 Win., .257 Roberts, 300 H&H, and .308 Norma Magnum. The High-Power bolt-action rifles seemed to be particularly hard hit by salt wood. That is why short extractors rifles bring less than long extractor guns. No factory replacement stocks are known to still be available. Deduct 20-25 percent for short extractor rifles. Proceed with caution.



Safari Grade

Standard model, standard calibers.

Model BBR

This is a bolt-action sporting rifle chambered for various popular calibers. It has a 24" barrel with an adjustable trigger and fluted bolt. It features a detachable magazine under the floorplate and was furnished without sights. The finish is blued with a checkered, walnut, Monte Carlo stock. It was manufactured between 1978 and 1984 by Miroku.

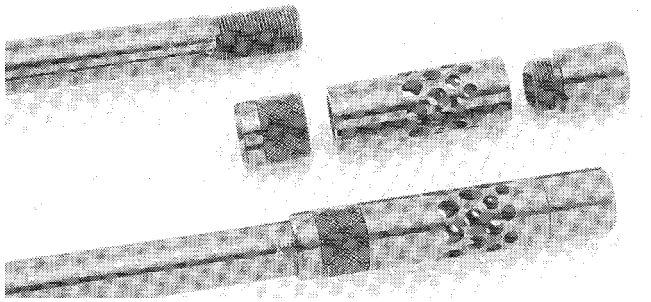
525	400	350	275	200

BOSS™ SYSTEM



Introduced by Browning in 1994 this new accuracy system allows the shooter to fine-tune his Browning rifle to the particular

load he is using. Consists of a tube on the end of the rifle muzzle that allows the shooter to select the best setting for the ammunition type. The system also reduces recoil. BOSS stands for Ballistic Optimizing Shooting System. This option will add approximately $80 to the value of the particular Browning rifle on which it is fitted.

X-BOLT SERIES

Introduced in 2008, the X-Bolt series of rifles features an adjustable three-position Feather Trigger system, a newly-designed bolt release, an improved scope mounting system, tang safety, and a generally slimmer, sleeker profile.

X-Bolt Composite Stalker

Features include steel receiver with matte blue finish, free-floating crowned barrel, matte black composite stock with palm swell, Inflex recoil pad. Various barrel lengths depending on chambering, which include both medium and long cartridges ranging from .243 Winchester to .338 Winchester Magnum. Introduced in 2008.

T-Bolt Model T-1

This is a unique, straight-pull, bolt-action sporting rifle chambered for .22 caliber cartridges. It has a 22" barrel with open sights and a 5-round magazine. The finish is blued with a plain walnut stock. It was manufactured between 1965 and 1974 by FN. Many T-Bolt rifles were affected by salt wood. Proceed with caution. Reintroduced 2006 with rotary magazine.

Model 52 Limited Edition

This model is based on the design of the original Winchester Model 52 .22 caliber bolt-action rifle. Fitted with a 24" barrel and walnut stock with oil finish. Metal pistol-grip cap and rosewood forend tip. Drilled and tapped for scope. Five-round detachable magazine. Blued finish. Weight is about 7 lbs. From 1991 to 1992 5,000 Model 52s were built.

NIB	Exc.	V.G.	Good	Fair	Poor
750	535	325	225	—	—

Trombone Model

This is a slide-action rifle chambered for the .22 LR cartridge. It has a 24" barrel with open sights and a takedown design. It has a tubular magazine and a hammerless action. There were approximately 150,000 manufactured by FN between 1922 and 1974. Approximately 3,200 were imported by Browning in the 1960s. They are marked with either the FN barrel address or the Browning Arms address. The Browning-marked guns are worth approximately 20 percent additional. The values given are for FN-marked guns.

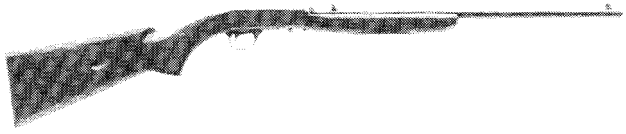
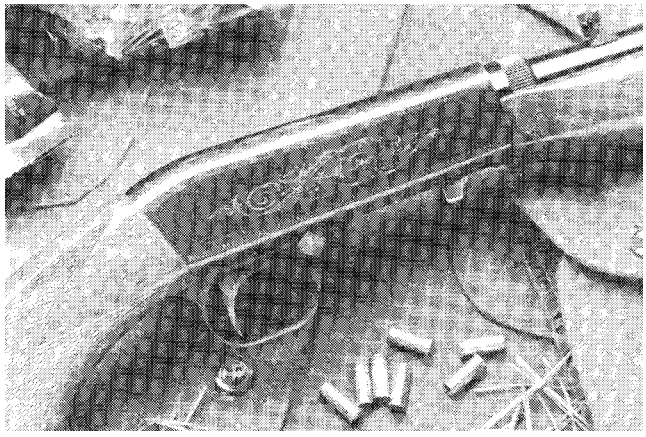
NOTE: Add 20 percent for models chambered for .22 Magnum.

.22 Caliber Semi-Auto

This is a blowback-operated, semi-automatic rifle chambered for the .22 Long Rifle or Short cartridge. It features a take-down barrel design with a 19.25" barrel and an 11-round, tubular magazine inside the buttstock. It is loaded through a hole in the middle of the buttstock. The finish is blued with a checkered walnut stock and beavertail forearm. This lightweight, compact firearm was manufactured by FN between 1956 and 1974 for U.S. marked guns. There are a number of versions that differ in the amount of ornamentation and the quality of materials and workmanship.

Grade I





NIB	Exc.	V.G.	Good	Fair	Poor

Patent 1900 High Power
This is a semi-automatic sporting rifle chambered for the .35 Remington cartridge. It is similar in configuration to the Remington Model 8 rifle. It has a 22" barrel with open sights and a 5-round, integral magazine. The finish is blued with a plain walnut stock. There were approximately 5,000 manufactured between 1910 and 1931. A deluxe model with a ribbed barrel and checkered walnut stock was also available and would be worth approximately 15 percent additional. Very rare in the USA.

Exc.	V.G.	Good	Fair	Poor
1100	900	600	475	300

BAR HIGH POWER RIFLE

This is a gas-operated, semi-automatic sporting rifle chambered for various popular calibers from the .243 up to the .338 Magnum cartridges. It was offered with either a 22" or 24" barrel with folding leaf sight until 1980. The finish is blued with a checkered walnut stock. The various grades offered differed in the amount of ornamentation and the quality of materials and workmanship utilized. Earlier models were manufactured in Belgium by FN; these guns would be worth approximately 15 percent additional over guns assembled in Portugal from parts manufactured by FN. The early .338 Magnum model is rarely encountered and would be worth approximately 25 percent additional. The Grade I values furnished are for Portuguese-assembled guns from 1977 until the introduction of the BAR Mark II in 1993. This model was introduced in 1967 and discontinued in 1977.

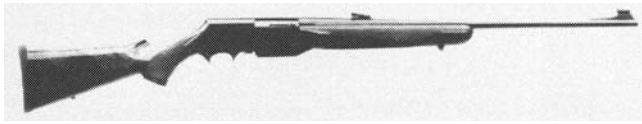
BAR Mark II Safari Rifle
This is an improved version of the BAR first introduced by Browning in 1967. Announced in 1993 this Mark II design uses a new gas system with a newly designed buffering system to improve reliability. This model also has a new bolt release lever, a new easily removable trigger assembly. Available with or without sights. Walnut stock with full pistol grip and recoil pad on magnum gun are standard. The receiver is blued with scroll engraving. Rifles with magnum calibers have a 24" barrel while standard calibers are fitted with a 22" barrel. Available in .243, .308, .270, .30-06, 7mm Rem. Mag., .300 Win. Mag., .338 Win. Mag. Standard calibers weigh about 7 lbs. 9 oz. and magnum calibers weigh about 8 lbs. 6 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
525	450	400	350	250	150

NOTE: Add 30 percent for .270 Wby. Mag., which was made for one year only.

BAR Mark II Lightweight
This version of the Mark II was introduced in 1997 and features a lightweight alloy receiver and shortened 20" barrel. It is offered in .30-06, .270 Win., .308 Win., and .243 Win. calibers. It is not offered with the BOSS system. Weight is approximately 7 lbs. 2 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
700	550	400	300	—	—

BAR Composite Stalker
Introduced in 2001 this model features a composite buttstock and forend with removable magazine. It is offered in short action (.243 and .308) with sights, and in standard action (.270 and .30-06) with no sights. In magnum calibers (7mm, .330 Win., and .338) it is offered with no sights and with the BOSS system as well.

NIB	Exc.	V.G.	Good	Fair	Poor
800	625	550	425	—	—

NOTE: For magnum calibers add $75, and for BOSS add $140.

BAR High Grade Models
These models will feature high grade walnut stock with highly polished blued barrel. Receivers will be grayed with game animals: mule deer and whitetail on the standard calibers (.270 and .30-06) and elk and moose on magnum calibers (7mm magnum and .300 Win. Mag).

BUCO

Germany

Buco Gas Pistol

This odd firearm looks more like a telescope than a pistol. It is chambered for a 10.55mm gas cartridge and is a single-shot. Overall it is approximately 5.5" long in its open or cocked position. The barrel is smooth bore and 3.75" in length. This pistol has no sights and no safety—one simply pulls the inner tube back much like extending a telescope, unscrews the end cap, inserts the round, and screws the cap back into place. When it is needed, a thumbnail is used to depress the sear and fire the pistol. They are marked on the end cap "Buco DRGM." No more information is available as to quantity or year of manufacture.

BURGESS GUN CO.

Buffalo, New York
Also SEE—Colt and Whitney

One of the most prolific 19th century designers was Andrew Burgess who established his own company in 1892. The Burgess Gun Company manufactured slide action shotguns and rifles operated by a unique pistol grip prior to their being purchased by the Winchester Repeating Arms Company in 1899. Arms based on Burgess' patents were manufactured by a variety of American gun makers. Serial numbers for all Burgess shotguns begin at 1000.

12 Gauge Slide Action Shotgun

A 12 gauge slide-action shotgun with a 28" or 30" barrel. Blued with a walnut stock. This model was available with 6 grades of engraving. The values listed are for the standard, plain model.

Burgess engraving grades (1-4)

BURNSIDE RIFLE CO.

Bristol Firearms Co.
Providence, Rhode Island

Bristol, Rhode Island

This is a historically desirable firearm for Civil War collectors as the designer, Ambrose E. Burnside, was to become a well-known Union general. The rifle, of which there were four distinct models, was used quite extensively in the Civil War.

This carbine was manufactured first by the Bristol Firearms Co., which made the entire production of the first model and also some of the second model. In 1862 the Burnside Firearms Co. was formed, and they produced the remainder of the second models and all of the third and fourth models. Production ceased entirely in 1865.

Burnside Carbine 1st Model

This model was produced by Bristol and was chambered for the .54 caliber. It is a breechloader that uses the percussion ignition system but features a cartridge of sorts made of copper, and a tape priming device that was located inside the frame. It has a 22" round barrel with no forend and a walnut stock with inspector's cartouche. The finish is blued and case-colored, and the frame is stamped "Burnside's /Patent/March 25th/1856." There were approximately 250 1st Models manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	15000	6000	1500

2nd Model

The 2nd Model features an improved breechblock opening mechanism located inside the trigger guard. The barrel is 21" long, and the other features are similar to the 1st Model. They are marked either "Bristol Firearm Co." or "Burnside Rifle Co./Providence-R.I." The barrel is marked "Cast Steel 1861," and some of the breechblock devices are marked "G.P. Foster Pat./April 10th 1860." There were approximately 1,500 2nd Models manufactured in 1861 and 1862.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	5500	2500	750

3rd Model

This model differs from the 2nd Model in that it has a forend with a barrel band and a slightly modified hammer. The markings are the same as the Burnside-manufactured 2nd Models. There were approximately 2,000 produced in 1862.

Exc.	V.G.	Good	Fair	Poor
—	—	3500	1250	500

4th Model

This model differs from the others in that it features a hinged breech that permits simpler loading of the odd-shaped Burnside percussion cartridge. The frame is marked "Burnside's Patent/Model of 1864." The other features are similar to the 3rd Model. There were approximately 50,000 manufactured between 1862 and 1865.

THE CABANAS P-21 PISTOL

BY DAN SHIDELER

The quirky Cananas P-21 Single-Shot BB/Blank Pistol.

I remember first reading about Cabanas guns in the pages of *Gun Digest*, probably 30 years ago. As you may recall, these wacky little oddballs fire .177" lead balls by means of a .22 Short blank cartridge.

At the risk of getting a big head, I suppose I am now the Cabanas King of Northern Indiana. Not only do I own three Cabanas rifles, but I have recently added a Cabanas Model P-21 pistol to my collection. Jealous? Of course you are.

For those who came in late, Cabanas blank guns, if you want to call them guns, were made by Industrias Cabanas, S.A., of Aguilas, Mexico, from around 1949 to around 1989. They weren't cartridge-firing guns, at least not in the strictest sense; they used .22 blank loads to shoot breech-loaded lead BBs or pellets (though the latter were not recommended by the manufacturer). The idea behind the Cabanas guns was to skirt Mexico's notoriously strict firearms ownership laws, which prohibited most conventional firearms, and give shooters a legal gun that actually went "bang."

According to the literal letter of the law, our friends at the BATFE consider the Cabanas guns to be firearms. So do the dealers from whom I've bought them. They have all insisted on transfer paperwork, and that's just jake with me. It does, however, lessen the chances of getting an affirmative response if you ask whether owning a Cabanas is really worth the trouble.

If you ever actually encounter a Cabanas gun, it'll probably be a rifle: a Pony, a Mini, or perhaps a Leyre or Lazer. These guns were all imported into the USA by the now-defunct Mandall's Shooting Supplies of Scottsdale, AZ, and all are single-shots. But if you encounter the Cabanas P-21 pistol, you've encountered an odd duck indeed.

The P-21 is a single-shot bolt-action "gun" with a 10" barrel. It looks like a ray gun of some sort and bears a faint general resemblance to late-run Remington XP-100 pistols. The finish on the barrel and receiver is a semi-gloss black enamel. Ditto for the stock. This finish, which appears to have been dipped, obscures the species and grain of whatever wood the stock is composed of. I suppose it's Mexican mystery wood or recycled pallet material or something.

The stock, however, isn't a total loss. It's actually rather comfortable. It has a palm swell, a groove for the trigger finger, and a thumbrest. This adds up a a rather long-barreled pistol that balances just ahead of the leading edge of the trigger guard. It's very steady and easy to hold on target.

And that's good, since the P-21 is intended as a target pistol. Its receiver is grooved for a scope mount and its front sight is hooded, both of which are features you might find desirable in a target pistol. The rear sight, though, is adjustable only for elevation. That's a pity, for my P-21 shoots consistently left of the point of aim. There's nothing I can do about it except apply some Kentucky windage and try to hold my mouth right when shooting.

The manual of arms for the P-21 pistol is pretty much the same as it is for the various Cabanas rifles: Pull back on the bolt lever. This simultaneously exposes the chamber and cams the manual safety upward into the "on" position. Point the pistol's muzzle downward. Insert a .177" lead ball into the chamber, making sure it falls through the chamber and seats against the leade. Insert a .22 Short blank into the chamber, pressing it as firmly as possible against the breech. Push the bolt handle home. Disengage the safety by flipping in downward. Squeeze the trigger and fire the ball. Pull back on the bolt to open the action. Pull back on the ribbed extractor collar surrounding the barrel to extract the fired case.

Reading back through the preceding paragraph, I realize that I've omitted an optional step that follows the squeezing of the trigger. That step is: Say "Oh, %?$#!" because you didn't hit what you were aiming at. Alas, the P-21 (mine, anyway) seeems to be only a little more accurate than my Cabanas rifles with Gamo .177" lead round balls, which is to say: not very. My first shot pierced the "P" in a Pepsi can at 25 feet. My second shot perforated its base. My third, fourth and fifth shots apparently flew into some sort of Einsteinian black hole or time warp or something because they disappeared without a trace. I guess the first rule when shooting the P-21 is "make your first shot count."

I gave the gun every chance I could with the .177" balls, and then I got naughty and did something the manufacturer says you should never, ever do: I loaded the pistol with a Beeman Crow Magnum skirted pellet. (If you shoot a skirted pellet in a Cabanas, there's some risk of its thin skirt detaching and lodging itself in the barrel. Not good.) Lo and behold, I actually got a 2.5" group at 25 feet! No keyholes, either -- just perfectly satisfying little .177" cookie-cutter holes in the aluminum. If I were to continue to shoot the skirted pellets, and I just might, I suppose the thing to do is to chase the bore with a cleaning rod after every shot. (Note: Never-ever-ever use steel BBs or anything other than lead in a Cabanas. If a steel BB lodges in the bore somehow on Shot #1, Shot #2 might have nasty consequences.)

The P-21's trigger is adjustable for both pull and length of travel. To adjust the trigger, should you really feel it necessary to do so, simply remove the single screw that holds the receiver assembly to the stock. Right there is the trigger adjustment piece, a ribbed cylindrical affair. Turning the cylinder clockwise decreases travel and increases pull; turning it counterclockwise does just the opposite.

As I've said, I got my best results shooting the P-21 with Beeman skirted pellets. Normal-length .22 blank loads (e.g., CCI) were too tight a fit in the chamber, however, so I used the miniature .22 "acorn" blanks available from Lion Country. These crimped little copper-colored imps are just about the cutest things I've ever seen. They give a most satisfying crack, not a pop. My post-mortems on various beverage cans indicate that they propel a pellet with some authority, certainly enough to make a chipmunk or starling regret doing whatever it was that made him a target.

One precautionary word on shooting all Cabanas guns, not just the P-21: several manufacturers still make .22 blank shells loaded with black powder. These work just fine in the Cabanas guns, provided they fit the chamber, but they do make necessary a rather messy cleanup procedure afterwards. A rifled bore caked with black powder residue and put in storage will soon become a smoothbore. Use smokeless blanks and save yourself some trouble.

So is there any practical application for the Cabanas P-21 pistol? Nope, none whatsoever. I assume that the P-21 was discontinued along with its rifle-size Cabanas brethren in 1989, and nobody seems to have given a damn. Frankly, there are scads of top-quality air pistols out there that will shoot rings around the P-21, and buying one of them doesn't involve federal transfer paperwork. (Not yet, anyway.)

All things said, the Cabanas P-21 pistol is just a footnote in the long history of firearms. An interesting footnote, perhaps, but a footnote all the same.

C

CABANAS, INDUSTRIAS S.A.

Aguilas, Mexico

This company manufactures a variety of bolt-action single-shot rifles that utilize .22 caliber blanks to propel a .177 caliber pellet. Scarce, but not especially valuable.

CENTURY GUN COMPANY/NEW CENTURY MANFACTURING

Evansville, Knightstown & Greenfield, Indiana

This revolver design was originally manufactured in 1972 by Russell Wilson, who sandcasted the bronze frame (cloned from the Colt SAA configuration) in Evansville, IN. Gene Phelps purchased the manufacturing rights for this gun and formed a partnership with Earl Keller to produce a redesigned frame, also using sandcast bronze.

The original Century revolver was made in Evansville, IN beginning in 1973 (1973 was the 100th anniversary of the .45-70 Govt. cartridge — hence the term Century) and production was halted in 1976 at ser. no. 524. In late 1976, Phelps and Keller (the two original partners on the venture) dissolved their partnership and each began manufacturing their own version of the .45-70 revolver. Gene Phelps completely redesigned the gun's interior and began manufacturing the Heritage I, with an investment-cast steel frame, and without the Century's novel cross-bolt safety. Keller's Century Manufacturing, Inc. continued to produce the original Century, with some design refinements, and in 1985 the company was purchased by Dr. Paul Majors, who died in Dec. of 2001.

The most recent Century revolver featured a manganese bronze frame and other components in addition to having a cross-bolt safety. They were produced in .45-70 and various other cals., in Greenfield, IN. Earl Keller died in 1986. The second series was made in Greenfield, IN with limited production resuming in 1986. Earlier handmade "Evansville" Model 100s (disc.) are currently selling for between $2,500-$3,500, depending on the region and condition. Post-Evansville guns retail from a high around $1700 (Excellent) to $9000 (Good) in .45-70; other chamberings such as .444 Marlin and .50-70 Government generally bring 10 percent to 20 percent more.

In Feb., 2002, Century Mfg. was purchased by Dave Lukens & Jeff Yelton and moved to Knightstown, IN. Dave and Jeff produced approximately 500 guns.

In June, 2004, Century Mfg. was purchased by Bill, Stephen, Robert, and Thomas Jordan and renamed the company to New Century Manufacturing, LLC. Production was expected to begin in late 2004.

(Courtesy New Century Manufacturing)

CENTURY INTERNATIONAL ARMS CO.

St. Albans, Vermont

Century International Arms is a leading importer of military firearms primarily of foreign manufacture. These low-cost firearms are excellent shooters and many have been restocked to make satisfactory hunting rifles. The listing offers a representative sample of imports from Century. The company is always providing new surplus firearms that may not appear in this edition.

Centurion Shotgun

This is a new over/under shotgun in 12, 20, and 28 gauge as well as .410 bore with 2-3/4" chambers. The walnut stock is checkered. The receiver is blue. Offered in 28" vent-rib barrels in full and modified chokes. Weight is about 7.35 lbs. for the 12 gauge and 5.3 lbs. for the .410 bore.

CHAPMAN C.

Location Unknown

Chapman Rifle

This rare Confederate weapon was patterned after the U.S. Model 1841. It is chambered for .58 caliber and utilizes the percussion ignition system. The round barrel is 33" long, with a full-length stock and two barrel bands. The mountings are brass, and the stock is walnut. "C.Chapman" was stamped on the lock. This weapon was manufactured somewhere in the Confederate States of America during the Civil War, but little else is known.

CHAPMAN CHARLES

Chattanooga, Tennessee

Chapman produced a limited number of percussion carbines and rifles during the Civil War. Carbines had an overall length of 39-1/2" and .54 caliber barrels 24" in length. Their furniture was of brass. Chapman rifles resembled the U.S. Model 1841 Rifle, but did not have patchboxes. Overall length 48-1/2", barrel length 33", caliber .58. Chapman rifles and carbines are marked "C. CHAPMAN" on the lockplates.

Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition.

Schofield Civilian Model

Fitted with 7" barrel and offered in .44 Russian & .44 Special, .44 WCF, .45 Schofield, .45 Long Colt.

NIB	Exc.	V.G.	Good	Fair	Poor
849	600	525	425	—	—

Schofield Military Model

Essentially the same as the Civilian Model except for its markings.

NIB	Exc.	V.G.	Good	Fair	Poor
849	600	525	425	—	—

Schofield Wells Fargo

Similar to the Military and Civilian Model but fitted with a 5" barrel. Calibers are the same.

NIB	Exc.	V.G.	Good	Fair	Poor
849	600	525	425	—	—

NOTE: For standard nickel finish add $100 and for custom nickel finish add $150.

Model 1872 Open Top

This revolver is offered in a number of different calibers and configurations. It is chambered for the .44 SP, .44 Colt, .44 Russian, .45 Schofield, .38 Colt, .38 Special. It can be fitted

with Army or Navy grips. Barrel lengths are 4.75", 5.5", or 7.5". Offered in regular blued finish, charcoal blue finish, or original finish.

NIB	Exc.	V.G.	Good	Fair	Poor
530	425	350	—	—	—

NOTE: Add $40 for charcoal finish and $50 for original finish. Add $25 for silver-plated back strap and trigger guard.

COLT SINGLE-ACTION ARMY CONFIGURATIONS

Cimarron Arms reproduction of the 1873 Colt Single-Action Army revolver comes in two basic configurations. First is the "Old Model" with the black powder frame screw-in cylinder pin retainer and circular bull's eye ejector head. Second is the "pre-war Model" style frame with spring loaded cross-pin cylinder retainer and half moon ejector head. Old Model revolvers are available in authentic old style charcoal blue finish at an extra charge. Unless otherwise stated all of these Colt reproductions are produced by Uberti of Italy. Plain walnut grips are standard unless noted.

General Custer 7th Cavalry Model

Has US military markings and is fitted with 7-1/2" barrel on an Old Model frame. Offered in .45 Long Colt only.

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	350	300	—	—

Rough Rider U.S. Artillery Model

This version of the Old Model is fitted with a 5-1/2" barrel and chambered for .45 Long Colt.

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	350	300	—	—

Frontier Six Shooter

This revolver is offered with a choice of 4-3/4", 5-1/2", or 7-1/2" barrel. It is chambered for .38 WCF, .357 Magnum, .44 WCF, .45 Long Colt, or .45 LC with extra .45 ACP cylinder.

NIB	Exc.	V.G.	Good	Fair	Poor
475	350	300	275	—	—

NOTE: For charcoal blue finish add $40 to NIB price. For extra .45 ACP cylinder add $30. For stainless steel add $50.

Sheriff's Model w/no ejector

Fitted with a 3" barrel and chambered in .44 WCF or .45 Long Colt. Built on an Old Model frame.

NIB	Exc.	V.G.	Good	Fair	Poor
469	350	300	275	—	—

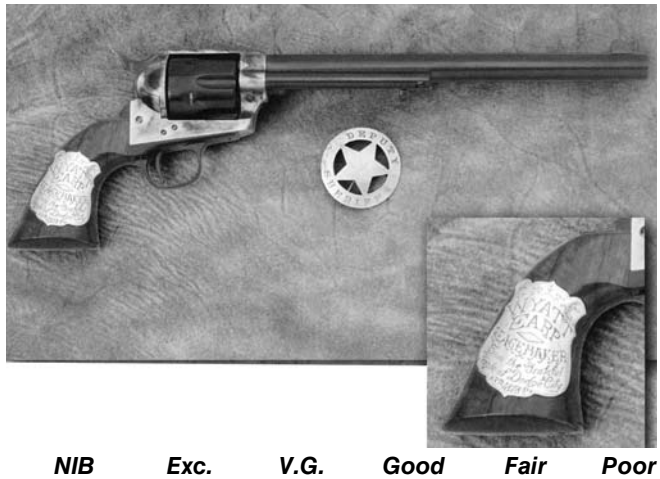
New Sheriff's Model w/ejector

This variation is fitted with a 3-1/2" barrel with ejector and is available in .357 Magnum, .44 WCF, .44 Special, and .45 Long Colt. For checkered walnut grips add $35.

NIB	Exc.	V.G.	Good	Fair	Poor
500	400	325	275	—	—

Wyatt Earp Buntline

This is a limited edition model fitted with a 10" barrel chambered for the .45 Long Colt cartridge. Model P frame. Silver shield inlaid in grip.



NIB	Exc.	V.G.	Good	Fair	Poor
760	600	500	425	—	—

New Thunderer

The frame is based on the Old Model fitted with a bird's-head grip with a choice of plain or checkered walnut grips. Originally

offered in 3-1/2" or 4-3/4" barrel lengths; in 1997 5-1/2" barrels were offered. Chambered for .357 Magnum, .44 WCF, .44 Special, or .45 Long Colt/.45 ACP. Add $35 for checkered grips.

NIB	Exc.	V.G.	Good	Fair	Poor
520	400	325	275	—	—

Thunderer Long Tom

Same as the New Thunderer except for a barrel length of 7.5".

CLAPP, HOFFMAN & CO. CLAPP, GATES & CO. RIFLES

Alamance, North Carolina

Overall length: Types I, II, & III 51-1/4" to 52", Type IV varies between 46-1/2" and 51"; barrel length: Types I, II, & III 35-1/4" to 36", Type IV varies between 31-1/4" and 35-7/8"; caliber: Types I, II, & III .50, Type IV .577; markings: none. Despite the absence of makers marks, the Clapp, Gates & Co. products are readily distinguished by their part-round, part-octagonal (octagonal section on Types I to III, about 4" long, 4-3/4" to 5-1/2" on Type IV rifles) barrels having only a slightly raised bolster projecting from the upper right quarter. This small bolster accommodates the boxlock that distinguished the first 100 rifles produced. This gave way to a standard percussion lock on subsequent production, which required that the hammer bend sharply to the left to strike the cone. Type I and Type II rifles were adapted to a "footprint" saber bayonet lug on the right side of the barrel; Types III and IV also had a saber bayonet lug on the right side of the barrel but of the standard pattern. Types III and IV are distinguished by their caliber, the former being .50, the latter .577. Prices reflect Type II through IV production; Type I (while extant) has never been offered for sale and would presumably bring a significantly higher premium.

COLT PATERSON MODELS

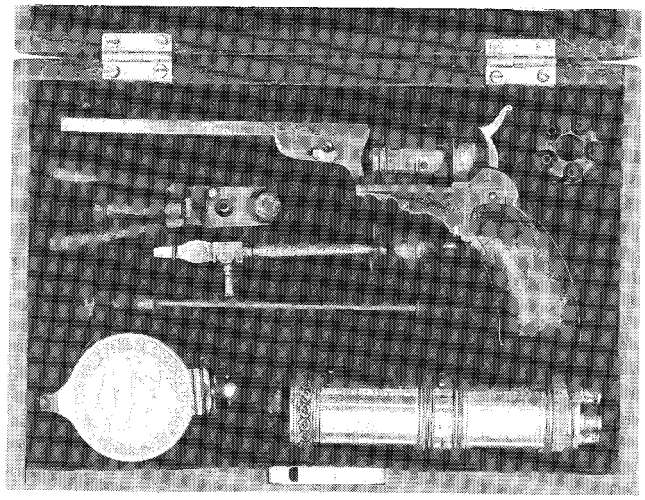
Pocket or Baby Paterson Model No. 1

The Paterson was the first production revolver manufactured by Colt. It was first made in 1837. The Model 1 or Pocket Model is the most diminutive of the Paterson line. The revolver is serial numbered in its own range, #1 through #500. The numbers are not visible without dismantling the revolver. The barrel lengths run from 1.75" to 4.75". The standard model has no attached loading lever. The chambering is .28 caliber percussion and it holds five shots. The finish is all blued, and the grips are varnished walnut. It has a roll-engraved cylinder scene, and the barrel is stamped "Patent Arms Mfg. Co. Paterson N.J. Colt's Pt." Cased examples in Very Good or better condition can bring upwards of $100,000.

Exc.	V.G.	Good	Fair	Poor
—	70000	30000	12500	—

Belt Model Paterson No. 2

The Belt Model Paterson is a larger revolver with a straight-grip and an octagonal barrel that is 2.5" to 5.5" in length. It is chambered for .31 caliber percussion and holds five shots. The finish is all blued, with varnished walnut grips and no attached loading lever. It has a roll-engraved cylinder scene, and the barrel is stamped "Patent Arms Mfg. Co. Paterson N.J. Colt's Pt." The serial number range is #1-#850 and is shared with the #3 Belt Model. It was made from 1837-1840. An excellent cased example was auctioned by Rock Island Auction in 2007 for $414,000.



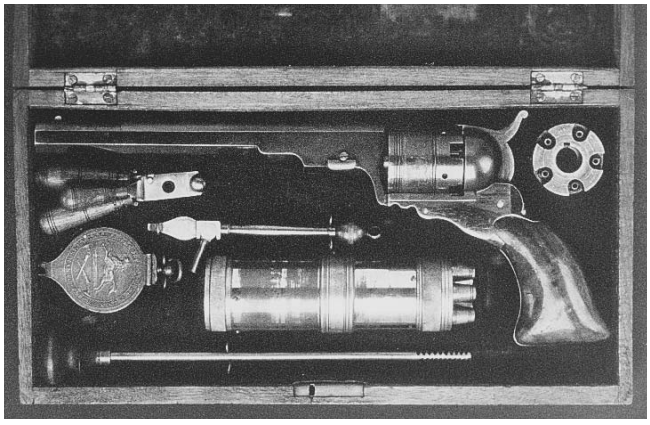
Courtesy Buffalo Bill Historical Center, Cody, Wyoming

Exc.	V.G.	Good	Fair	Poor
—	—	50000	20000	—

Belt Model Paterson No. 3

This revolver is quite similar to the Model #2 except that the grips are curved outward at the bottom to form a more handfill-

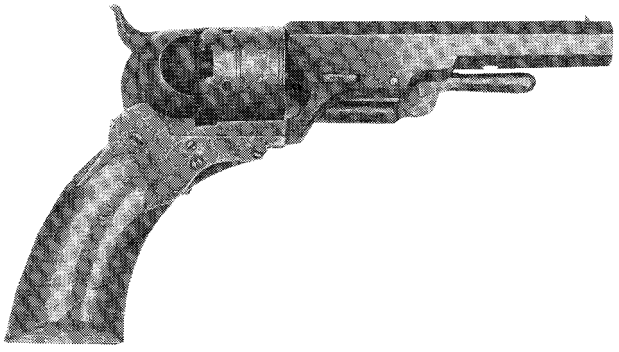
ing configuration. They are serial numbered in the same #1-#850 range. Some attached loading levers have been noted on this model, but they are extremely rare and would add approximately 35 percent to the value.



Exc.	V.G.	Good	Fair	Poor
—	—	75000	30000	—

Ehlers Model Pocket Paterson

John Ehlers was a major stockholder and treasurer of the Patent Arms Mfg. Co. when it went bankrupt. He seized the assets and inventory. These revolvers were Pocket Model Patersons that were not finished at the time. Ehlers had them finished and marketed them. They had an attached loading lever, and the abbreviation "Mfg Co." was deleted from the barrel stamping. There were 500 revolvers involved in the Ehlers variation totally, and they were produced from 1840-1843.



Exc.	V.G.	Good	Fair	Poor
—	—	50000	20000	—

Ehlers Belt Model Paterson

The same specifications apply to this larger revolver as they do to the Ehlers Pocket Model. It falls within the same 500 revolver involvement and is rare.

Exc.	V.G.	Good	Fair	Poor
—	—	50000	20000	—

Texas Paterson Model No. 5

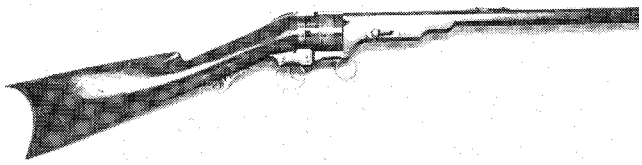
This is the largest and most sought after of the Paterson models. It is also known as the Holster Model. It has been verified as actually seeing use by both the military and civilians on the American frontier. It is chambered for .36 caliber percussion, holds five shots, and has an octagonal barrel that ranges from 4" to 12" in length. It has been observed with and without the attached loading lever, but those with it are rare. The finish is blued, with a case-colored hammer. The grips are varnished walnut. The cylinder is roll-engraved; and the barrel is stamped "Patent Arms Mfg. Co. Paterson, N.J. Colts Pt." Most Texas Patersons are well used and have a worn appearance. One in excellent or V.G. condition would be highly prized. A verified military model would be worth a great deal more than standard, so qualified appraisal would be essential. The serial number range is #1-#1000, and they were manufactured from 1838-1840. The attached loading lever brings approximately a 25 percent premium.

Exc.	V.G.	Good	Fair	Poor
—	—	125000	50000	—

COLT REVOLVING LONG GUNS 1837-1847

First Model Ring Lever Rifle

This was actually the first firearm manufactured by Colt; the first revolver appeared a short time later. There were 200 of the First Models made in 1837 and 1838. The octagonal barrel of the First Model is 32" long and browned, while the rest of the finish is blued. The stock is varnished walnut with a cheekpiece inlaid with Colt's trademark. The ring lever located in front of the frame is pulled to rotate the 8-shot cylinder and cock the hammer. The rifle is chambered for .34, .36, .38, .40, and .44 caliber percussion. The cylinder is roll-engraved, and the barrel is stamped "Colt's Patent/Patent Arms Mfg. Co., Paterson, N. Jersey." This model has a top strap over the cylinder. They were made both with and without an attached loading lever. The latter is worth approximately 10 percent more.

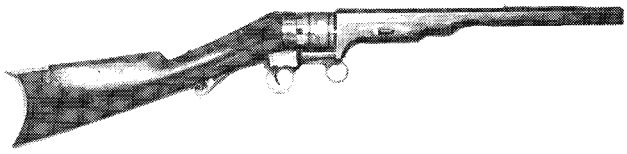


Courtesy Bonhams & Butterfields, San Francisco, California

Exc.	V.G.	Good	Fair	Poor
—	—	60000	20000	—

Second Model Ring Lever Rifle

This model is quite similar in appearance to the First Model. Its function is identical. The major difference is the absence of the top strap over the cylinder. It had no trademark stamped on the cheekpiece. The Second Model is offered with a 28" and a 32" octagonal barrel and is chambered for .44 caliber percussion, holding 8 shots. There were approximately 500 produced from 1838-1841. The presence of an attached cheekpiece would add approximately 10 percent to the value.

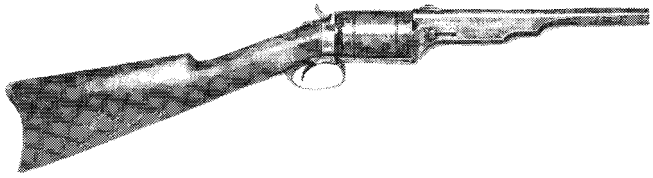


Courtesy Bonhams & Butterfields, San Francisco, California

Exc.	V.G.	Good	Fair	Poor
—	—	40000	12500	—

Model 1839 Shotgun

This model is quite similar in appearance to the 1839 Carbine. It is chambered for 16 gauge and holds six shots. It has a Damascus pattern barrel, and the most notable difference is a 3.5" (instead of a 2.5") long cylinder. There were only 225 of these made from 1839-1841. The markings are the same as on the Carbine.

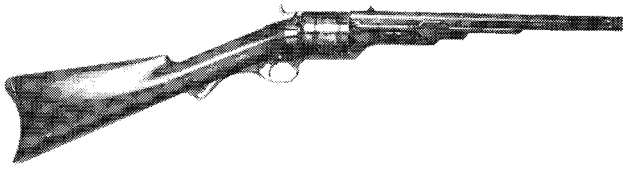


Courtesy Bonhams & Butterfields, San Francisco, California

Exc.	V.G.	Good	Fair	Poor
—	30000	25000	10000	—

Model 1839 Carbine

This model has no ring but features an exposed hammer for cocking and rotating the 6-shot cylinder. It is chambered for .525 smoothbore and comes standard with a 24" round barrel. Other barrel lengths have been noted. The finish is blued, with a browned barrel and a varnished walnut stock. The cylinder is roll-engraved, and the barrel is stamped "Patent Arms Mfg. Co. Paterson, N.J.-Colt's Pt." There were 950 manufactured from 1838-1841. Later variations of this model are found with the attached loading lever standard, and earlier models without one would bring approximately 25 percent additional. There were 360 purchased by the military and stamped "WAT" on the stock. These would be worth twice what a standard model would bring.



Courtesy Bonhams & Butterfields, San Francisco, California

Exc.	V.G.	Good	Fair	Poor
—	—	25000	9500	—

Model 1839/1850 Carbine

In 1848 Colt acquired a number of Model 1839 Carbines (approximately 40) from the state of Rhode Island. In an effort to make them marketable they were refinished and the majority fitted with plain cylinders (brightly polished) having integral ratchets around the arbor hole.

Barrel length 24"; caliber .525; barrel browned; cylinder polished; frame blued; furniture case hardened; walnut stock varnished.

Exc.	V.G.	Good	Fair	Poor
—	—	35000	12500	—

Model 1854 Russian Contract Musket

In 1854 Colt purchased a large number of U.S. Model 1822 flintlock muskets that the company altered to percussion cap ignition and rifled. The reworked muskets are dated 1854 on the barrel tang and at the rear of the lockplate. In most instances the original manufactory marks, such as Springfield or Harpers Ferry at the rear of the lockplate, have been removed, while the U.S. and eagle between the hammer and bolster remain. The percussion nipple bolster is marked COLT'S PATENT. Some examples have been noted with the date 1858.

Barrel length 42"; caliber .69; lock and furniture burnished bright; walnut stock oil finished.

Exc.	V.G.	Good	Fair	Poor
—	—	4000	1500	750

Breech-loading examples made in two styles are also known. Production of this variation is believed to have only taken place on an experimental basis.

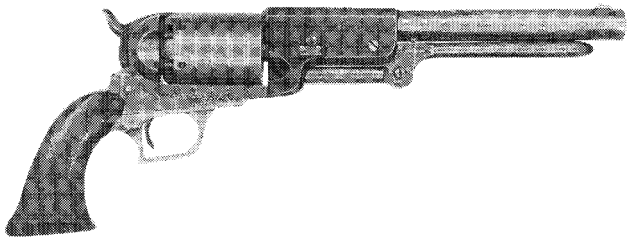
COLT WALKER-DRAGOON MODELS

Hartford, Connecticut

Walker Model Revolver

The Walker is a massive revolver. It weighs 4 lbs., 9 oz. and has a 9" part-round/part-octagonal barrel. The cylinder holds six shots and is chambered for .44 caliber percussion. There were 1,000 Walker Colts manufactured in 1847, and nearly all of them saw extremely hard use. Originally this model had a roll-engraved cylinder, military inspection marks, and barrel stamping that read "Address Saml. Colt-New York City." Practically all examples noted have had these markings worn or rusted beyond recognition. Because the Walker is perhaps the most desirable and sought-after Colt from a collector's standpoint and because of the extremely high value of a Walker in any condition, qualified appraisal is definitely recommended. These revolvers were serial numbered A, B, C, and D Company 1-220, and E Company 1-120. A Very Good example was auctioned by Rock Island Auctions in 2007 for $310,000.



Courtesy Buffalo Bill Historical Center, Cody, Wyoming

—	—	300000	150000	50000

Whitneyville Hartford Dragoon

This is a large, 6-shot, .44 caliber percussion revolver. It has a 7.5" part-round/part-octagonal barrel. The frame, hammer, and loading lever are case colored. The remainder is blued, with a brass trigger guard and varnished walnut grips. There were only 240 made in late 1847. The serial numbers run from 1100-1340. This model is often referred to as a Transitional Walker. Some of the parts used in its manufacture were left over from the Walker production run. This model has a roll-engraved cylinder scene, and the barrel is stamped "Address Saml. Colt New York-City." This is an extremely rare model.

Exc.	V.G.	Good	Fair	Poor
—	—	60000	35000	18500

Walker Replacement Dragoon

This extremely rare Colt (300 produced) is sometimes referred to as the "Fluck" in memory of the gentleman who first identified it as a distinct and separate model. They were produced by Colt as replacements to the military for Walkers that were no longer fit for service due to mechanical failures. They were large, 6-shot, .44 caliber percussion revolvers with 7.5" part-round/part-octagonal barrels. Serial numbers ran from 2216 to 2515. The frame, hammer, and loading lever are case-colored; the remainder, blued, The grips, which are longer than other Dragoons and similar to the Walkers, are of varnished walnut and bear the inspectors mark "WAT" inside an oval cartouche on one side and the letters "JH" on the other. The frame is stamped "Colt's/ Patent/U.S." The letter "P" appears on various parts of the gun.

Exc.	V.G.	Good	Fair	Poor
—	—	45000	25000	6000

First Model Dragoon

Another large, 6-shot, .44 caliber percussion revolver. It has a 7.5" part-round/part-octagonal barrel. The frame, hammer, and loading lever are case colored; the remainder, blued with a brass grip frame and square backed trigger guard. The trigger guard is silver-plated on the Civilian Model only. Another distinguishing feature on the First Model is the oval cylinder stop notches. The serial number range is 1341-8000. There were approximately 5,000 made. The cylinder is roll-engraved; and the barrel stampings read "Address Saml. Colt, New York City." "Colt's Patent" appears on the frame. On Military Models the letters "U.S." also appear on the frame.

Second Model Dragoon

Most of the improvements that distinguish this model from the First Model are internal and not readily apparent. The most obvious external change is the rectangular cylinder-stop notches. This model is serial numbered from 8000-10700, for a total production of approximately 2,700 revolvers manufactured in 1850 and 1851. There is a Civilian Model, a Military Model, and an extremely rare variation that was issued to the militias of New Hampshire and Massachusetts (marked "MS.").

REMINDER
Go to gun shows, not just to buy or sell, but to observe and learn.

Third Model Dragoon

This is the most common of all the large Colt percussion revolvers. Approximately 10,500 were manufactured from 1851 through 1861. It is quite similar in appearance to the Second Model, and the most obvious external difference is the round trigger guard. The Third Model Dragoon was the first Colt revolver available with a detachable shoulder stock. There are three basic types of stocks, and all are quite rare as only 1,250 were produced. There are two other major variations we will note—the "C.L." Dragoon, which was a militia-issued model and is rare, and the late-issue model with an 8" barrel. These are found over serial number 18000, and only 50 were produced.

Hartford English Dragoon

This is a variation of the Third Model Dragoon. The only notable differences are the British proofmarks and the distinct #1-#700 serial number range. Other than these two features, the description given for the Third Model would apply. These revolvers were manufactured in Hartford but were finished at Colt's London factory from 1853-1857. Some bear the hand-engraved barrel marking "Col. Colt London." Many of the English Dragoons were elaborately engraved, and individual appraisal would be a must. Two hundred revolvers came back to America in 1861 to be used in the Civil War.

—	—	25000	12000	3000

Model 1848 Baby Dragoon

This is a small, 5-shot, .31 caliber percussion revolver. It has an octagonal barrel in lengths of 3", 4", 5", and 6". Most were made without an attached loading lever, although some with loading levers have been noted. The frame, hammer, and loading lever (when present) are case colored; the barrel and cylinder, blued. The grip frame and trigger guard are silver-plated brass. There were approximately 15,500 manufactured between 1847 and 1850. The serial range is between 1-5500. The barrels are stamped "Address Saml. Colt/New York City." Some have been noted with the barrel address inside brackets. The frame is marked "Colt's/Patent." The first 10,000 revolvers have the Texas Ranger/Indian roll-engraved cylinder scene; the later guns the stagecoach holdup scene. This is a popular model, and many fakes have been noted.

Model 1849 Pocket Revolver

This is a small, either 5- or 6-shot, .31 caliber percussion revolver. It has an octagonal barrel 3", 4", 5", or 6" in length. Most had loading gates, but some did not. The frame, hammer, and loading lever are case colored; the cylinder and barrel are blued. The grip frame and round trigger guard are made of brass and are silver plated. There are both large and small trigger guard variations noted. This is the most plentiful of all the Colt percussion revolvers, with approximately 325,000 manufactured over a 23-year period, 1850-1873. There are over 200 variations of this model, and one should consult an expert for individual appraisals. There are many fine publications specializing in the field of Colt percussion revolvers that would be helpful in the identification of the variations. The values represented here are for the standard model.

—	—	1800	1200	300

London Model 1849 Pocket Revolver

Identical in configuration to the standard 1849 Pocket Revolver, the London-made models have a higher quality finish and their own serial number range, 1-11000. They were manufactured from 1853 through 1857. They feature a roll-engraved cylinder scene, and the barrels are stamped "Address Col. Colt/London." The first 265 revolvers, known as early models, have brass grip frames and small round trigger guards. They are quite rare and worth approximately 50 percent more than the standard model that has a steel grip frame and large oval trigger guard.

Exc.	V.G.	Good	Fair	Poor
—	—	1800	1200	300

Model 1851 Navy Revolver

This is undoubtedly the most popular revolver Colt produced in the medium size and power range. It is a 6-shot, .36-caliber percussion revolver with a 7.5" octagonal barrel. It has an attached loading lever. The basic model has a case colored frame hammer, and loading lever, with silver-plated brass grip frame and trigger guard. The grips are varnished walnut. Colt manufactured approximately 215,000 of these fine revolvers between 1850 and 1873. The basic Navy features a roll-engraved cylinder scene of a battle between the navies of Texas and Mexico. There are three distinct barrel stampings—serial number 1-74000, "Address Saml. Colt New York City"; serial number 74001-101000 "Address Saml. Colt. Hartford, Ct."; and serial number 101001-215000 "Address Saml. Colt New York U.S. America." The left side of the frame is stamped "Colt's/Patent" on all variations. This model is also available with a detached shoulder stock, and values for the stocks today are nearly as high as for the revolver itself. Careful appraisal should be secured before purchase. The number of variations within the 1851 Navy model designation makes it necessary to read specialized text available on the subject.

London Model 1851 Navy Revolver

These revolvers are physically similar to the U.S.-made model with the exception of the barrel address, which reads "Address Col. Colt. London." There are also British proofmarks stamped on the barrel and cylinder. There were 42,000 made between 1853 and 1857. They have their own serial number range, #1-#42,000. There are two major variations of the London Navy, and again a serious purchaser would be well advised to seek qualified appraisal as fakes have been noted.

1st Model

Serial #1-#2,000 with a small round brass trigger guard and grip frame. Squareback guard worth a 40 percent premium.

Exc.	V.G.	Good	Fair	Poor
—	—	4250	1750	700

2nd Model

Serial #2,001-#42,000, steel grip frame, and large round trigger guard.

COLT SIDE HAMMER MODELS

Model 1855 Side Hammer "Root" Pocket Revolver

The "Root," as it is popularly known, was the only solid-frame revolver Colt ever made. It has a spur trigger and walnut grips, and the hammer is mounted on the right side of the frame. The standard finish is a case colored frame, hammer, and loading lever, with the barrel and cylinder blued. It is chambered for both .28 caliber and .31 caliber percussion. Each caliber has its own serial number range—1-30000 for the .28 caliber and 1-14000 for the .31 caliber. The model consists of seven basic variations, and the serious student should avail himself of the fine publications dealing with this model in depth. Colt produced the Side Hammer Root from 1855-1870.

Models 1 and 1A Serial #1-384

3.5" octagonal barrel, .28 caliber, roll-engraved cylinder, Hartford barrel address without pointing hand.

COLT SIDE HAMMER LONG GUNS

Model 1855 Sporting Rifle, 1st Model

This is a 6-shot revolving rifle chambered for .36 caliber percussion. It comes with a 21", 24", 27", or 30" round barrel that is part octagonal where it joins the frame. The stock is walnut with either an oil or a varnish finish. The frame, hammer, and loading lever are case colored; the rest of the metal, blued. The hammer is on the right side of the frame. The 1st Model has no forend, and an oiling device is attached to the barrel underlug. The trigger guard has two spur-like projections in front and in back of the bow. The roll-engraved cylinder scene depicts a hunter shooting at five deer and is found only on this model. The standard stampings are " Colt's Pt./1856" and "Address S. Colt Hartford, Ct. U.S.A."

Early Model

Low serial numbers with a hand-engraved barrel marking "Address S. Colt Hartford, U.S.A."

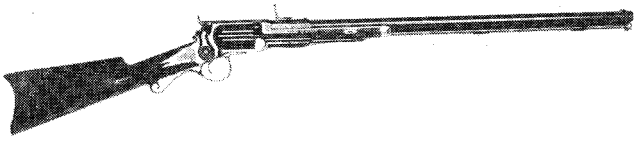
Model 1855 Half Stock Sporting Rifle

Although this rifle is quite similar in appearance and finish to the 1st Model, there are some notable differences. It features a walnut forend that protrudes halfway down the barrel. There are two types of trigger guards—a short projectionless one or a long model with a graceful scroll. There is a 6-shot model chambered for .36 or .44 caliber or a 5-shot model chambered for .56 caliber. The cylinder is fully fluted. The markings are "Colt's Pt/1856" and "Address Col. Colt/Hartford Ct. U.S.A." There were approximately 1,500 manufactured between 1857 and 1864.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	9500	3500	1000

Model 1855 Full Stock Military Rifle

This model holds 6 shots in its .44 caliber chambering and 5 shots when chambered for .56 caliber. It is another side hammer revolving rifle that resembles the Half Stock model. The barrels are round and part-octagonal where they join the frame. They come in lengths of 21", 24", 27", 31", and 37". The hammer and loading lever are case colored; the rest of the metal parts, blued. The walnut buttstock and full length forend are oil finished, and this model has sling swivels. The cylinder is fully fluted. Military models have provisions for affixing a bayonet and military-style sights and bear the "U.S." martial mark on examples that were actually issued to the military. The standard stampings found on this model are "Colt's Pt/1856" and "Address Col. Colt Hartford, Ct. U.S.A." There were an estimated 9,300 manufactured between 1856 and 1864.

Without Martial Markings

Exc.	V.G.	Good	Fair	Poor
—	—	8000	3500	1000

Model 1855 Full Stock Sporting Rifle

This model is similar in appearance to the Military model, with these notable exceptions. There is no provision for attaching a bayonet, there are no sling swivels, and it has sporting-style sights. The buttplate is crescent shaped. This model has been noted chambered for .56 caliber in a 5-shot version and chambered for .36, .40, .44, and .50 caliber in the 6-shot variation. They are quite scarce in .40 and .50 caliber and will bring a 10 percent premium. The standard markings are "Colt's Pt/1856" and "Address Col. Colt/Hartford Ct. U.S.A." Production on this model was quite limited (several hundred at most) between the years 1856 and 1864.

Exc.	V.G.	Good	Fair	Poor
—	—	10500	4000	1000

Model 1855 Revolving Carbine

This model is similar in appearance to the 1855 Military Rifle. The barrel lengths of 15", 18", and 21" plus the absence of a forend make the standard Carbine Model readily identifiable. The markings are the same. Approximately 4,400 were manufactured between 1856 and 1864.

Exc.	V.G.	Good	Fair	Poor
—	—	9500	4000	1000

Model 1855 Artillery Carbine

Identical to the standard carbine but chambered for .56 caliber only, it has a 24" barrel, full-length walnut forend, and a bayonet lug.

—	—	17000	5500	1500

Model 1855 British Carbine

This is a British-proofed version with barrel lengths of up to 30". It has a brass trigger guard and buttplate and is chambered for .56 caliber only. This variation is usually found in the 10000-12000 serial number range.

Exc.	V.G.	Good	Fair	Poor
—	—	9000	3750	1000

Model 1855 Revolving Shotgun

This model very much resembles the Half Stock Sporting Rifle but was made with a 27", 30", 33", and 36" smoothbore barrel. It has a 5-shot cylinder chambered for .60 or .75 caliber (20 or 10 gauge). This model has a case-colored hammer and loading lever; the rest of the metal is blued, with an occasional browned barrel noted. The buttstock and forend are of walnut,

either oil or varnish-finished. This model has no rear sight and a small trigger guard with the caliber stamped on it. Some have been noted with the large scroll trigger guard; these would add 10 percent to the value. The rarest shotgun variation would be a full stocked version in either gauge, and qualified appraisal would be highly recommended. This model is serial numbered in its own range, #1-#1100. They were manufactured from 1860-1863.

Model 1861 Single-Shot Rifled Musket

With the advent of the Civil War, the army of the Union seriously needed military arms. Colt was given a contract to supply 112,500 1861-pattern percussion single-shot muskets. Between 1861 and 1865, 75,000 were delivered. They have 40" rifled barrels chambered for .58 caliber. The musket is equipped with military sights, sling swivels, and a bayonet lug. The metal finish is bright steel, and the stock is oil-finished walnut. Military inspector's marks are found on all major parts. "VP" over an eagle is stamped on the breech along with a date. The Colt address and a date are stamped on the lockplate. A large number of these rifles were altered to the Snyder breech loading system for the Bey of Egypt.

COLT PERCUSSION REVOLVERS

Model 1860 Army Revolver

This model was the third most produced of the Colt percussion handguns. It was the primary revolver used by the Union Army during the Civil War. Colt delivered 127,156 of these revolvers to be used during those hostilities. This is a 6-shot .44 caliber percussion revolver. It has either a 7.5" or 8" round barrel with an attached loading lever. The frame, hammer, and loading lever are case colored; the barrel and cylinder are blued. The trigger guard and front strap are brass, and the backstrap is blued steel. The grips are one-piece walnut. The early models have the barrels stamped "Address Saml. Colt Hartford Ct." Later models are stamped "Address Col. Saml. Colt New-York U.S. America." "Colt's/Patent" is stamped on the left side of the frame; ".44 Cal.," on the trigger guard. The cylinder is roll engraved with the naval battle scene. There were a total of 200,500 1860 Army Revolvers manufactured between 1860 and 1873.

Model 1861 Navy Revolver

This model is a 6-shot, 7.5" round-barreled, .36 caliber percussion revolver. The frame, hammer, and attached loading lever are case colored. The barrel and cylinder are blued. The grip frame and trigger guard are silver-plated brass. The grips are of one-piece walnut. The cylinder has the roll-engraved naval battle scene, and the barrel stamping is "Address Col. Saml. Colt New-York U.S. America." The frame is stamped "Colts/Patent" with "36 Cal." on the trigger guard. There are not many variations within the 1861 Navy model designation, as less than 39,000 were made between 1861 and 1873.

Model 1862 Pocket Navy Revolver

This is a smaller, 5-shot, .36 caliber percussion revolver that resembles the configuration of the 1851 Navy. It has a 4.5", 5.5", or 6.5" octagonal barrel with an attached loading lever. The frame, hammer, and loading lever are case colored; the barrel and cylinder, blued. The grip frame and trigger guard are silver-plated brass; and the one-piece grips, of varnished walnut. The stagecoach holdup scene is roll-engraved on the cylinder. The frame is stamped "Colt's/Patent"; and the barrel, "Address Col. Saml. Colt New-York U.S. America." There were approximately 19,000 manufactured between 1861 and 1873. They are serial numbered in the same range as the Model 1862 Police. Because a great many were used for metallic cartridge conversions, they are quite scarce today.

The London Address Model with blued steel grip frame would be worth more than the standard model.

Standard Production Model

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1200	500

NOTE: Longer barrels will bring a premium over the 4.5" length.

Model 1862 Police Revolver

This is a slim, attractively designed revolver that some consider to be the most aesthetically pleasing of all the Colt percussion designs. It has a 5-shot, half-fluted cylinder chambered for .36 caliber. It is offered with a 3.5", 4.5", 5.5", or 6.5" round barrel. The frame, hammer, and loading lever are case colored; the barrel and cylinder, blued. The grip frame is silver-plated brass; and the one-piece grips, varnished walnut. The barrel is stamped "Address Col. Saml Colt New-York U.S. America"; the frame has "Colt's/Patent" on the left side. One of the cylinder flutes is marked "Pat Sept. 10th 1850." There were approximately 28,000 of these manufactured between 1861 and 1873. Many were converted to metallic cartridge use, so they are quite scarce on today's market.

The London Address Model would be worth approximately twice the value of the standard model.

NOTE: Longer barrels will bring a premium over the 3.5" or 4.5" length.

COLT METALLIC CARTRIDGE CONVERSIONS

Thuer Conversion Revolver

Although quite simplistic and not commercially successful, the Thuer Conversion was the first attempt by Colt to convert the percussion revolvers to the new metallic cartridge system. This conversion was designed around the tapered Thuer cartridge and consists of a ring that replaced the back part of the cylinder, which had been milled off. This ring is stamped "Pat. Sep. / 15. 1868." The ejection position is marked with the letter "E." These conversions have rebounding firing pins and are milled to allow loading from the front of the revolver. This conversion was undertaken on the six different models listed; and all other specifications, finishes, markings, etc., not directly affected by the conversion would be the same as previously described. From a collectible and investment standpoint, the Thuer Conversion is very desirable. Competent appraisal should be secured if acquisition is contemplated.

Richards Conversion, 1860 Army Revolver

This was Colt's second attempt at metallic cartridge conversion, and it met with quite a bit more success than the first. The Richards Conversion was designed for the .44 Colt cartridge and has a 6-shot cylinder and an integral ejector rod to replace the loading lever that had been removed. The other specifications pertaining to the 1860 Army Revolver remain as previously described if they are not directly altered by the conversion. The Richards Conversion adds a breechplate with a firing pin and its own rear sight. There were approximately 9,000 of these Conversions manufactured between 1873 and 1878.

NOTE: Blued models will bring higher prices than nickel models in the same condition.

Richards-Mason Conversion, 1860 Army Revolver

This conversion is different from the Richards Conversion in a number of readily apparent aspects. The barrel was manufactured with a small lug much different in appearance than seen on the standard 1860 Army. The breechplate does not have its own rear sight, and there is a milled area to allow the hammer to contact the base of the cartridge. These Conversions were also chambered for the .44 Colt cartridge, and the cylinder holds 6 shots. There is an integral ejector rod in place of the loading lever. The barrels on some are stamped either "Address Col. Saml. Colt New-York U.S. America" or "Colt's Pt. F.A. Mfg. Co. Hartford, Ct." The patent dates 1871 and 1872 are stamped on the left side of the frame. The finish of these revolvers, as well as the grips, were for the most part the same as on the unconverted Armies; but for the first time, nickel-plated guns are found. There were approximately 2,100 of these Conversions produced in 1877 and 1878.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	6000	2500	800

NOTE: Blued models will bring higher prices than nickel models in the same condition.

Richards-Mason Conversions 1851 Navy Revolver

These revolvers were converted in the same way as the 1860 Army previously described, the major difference being the caliber .38, either rimfire or centerfire. Finishes are mostly the same as on unconverted revolvers, but nickel-plated guns are not rare.

Model 1862 Police and Pocket Navy Conversions

The conversion of these two revolver models is the most difficult to catalogue of all the Colt variations. There were approximately 24,000 of these produced between 1873 and 1880. There are five basic variations with a number of sub-variations. The confusion is usually caused by the different ways in which these were marked. Depending upon what parts were utilized, caliber markings could be particularly confusing. One must also consider the fact that many of these conversion revolvers found their way into secondary markets, such as Mexico and Central and South America, where they were either destroyed or received sufficient abuse to obliterate most identifying markings. The five basic variations are all chambered for either the .38 rimfire or the .38 centerfire cartridge. All held 5 shots, and most were found with the round roll-engraved stagecoach holdup scene. The half-fluted cylinder from the 1862 Police is quite rare on the conversion revolver and not found at all on some of the variations. The finishes on these guns were pretty much the same as they were before conversion, but it is not unusual to find nickel-plated specimens. Blued models will bring a premium over nickel in the same condition. The basic variations are listed.

Model 1871-1872 Open Top Revolver

This model was the first revolver Colt manufactured especially for a metallic cartridge. It was not a conversion. The frame, 7.5" or 8" round barrel, and the 6-shot cylinder were produced for the .44 rimfire metallic cartridge. The grip frame and some internal parts were taken from the 1860 Army and the 1851 Navy. Although this model was not commercially successful and was not accepted by the U.S. Ordnance Department, it did pave the way for the Single-Action Army that came out shortly thereafter and was an immediate success. This model is all blued, with a case colored hammer. There are some with silver-plated brass grip frames, but most are blued steel. The one-piece grips are of varnished walnut. The cylinder is roll-engraved with the naval battle scene. The barrel is stamped "Address Col. Saml. Colt New-York U.S. America." The later production revolvers are barrel stamped "Colt's Pt. F.A. Mfg. Co. Hartford, Ct. U.S.A." The first 1,000 revolvers were

stamped "Colt's/Patent." After that, 1871 and 1872 patent dates appeared on the frame. There were 7,000 of these revolvers manufactured in 1872 and 1873.

COLT DERRINGERS AND POCKET REVOLVERS

NOTE: A surprising number of Colt pistols are still found in their original boxes, even older models. This can add 100 percent to the value of the pistol.

First Model Derringer

This is a small all-metal single-shot. It is chambered for the .41 rimfire cartridge. The 2.5" barrel pivots to the left and downward for loading. This model is engraved with a scroll pattern and has been noted blued, silver, or nickel-plated. The barrel is stamped "Colt's Pt. F.A. Mfg. Co./Hartford Ct. U.S.A/ No.1." ".41 Cal." is stamped on the frame under the release catch. There were approximately 6,500 of this model manufactured from 1870-1890. It was the first single-shot pistol Colt produced.

Second Model Derringer

Although this model has the same odd shape as the First Model, it is readily identifiable by the checkered varnished walnut grips and the "No 2" on the barrel after the address. It is also .41 rimfire and has a 2.5" barrel that pivots in the same manner as the First Model. There were approximately 9,000 of these manufactured between 1870 and 1890.

—	—	2000	900	400

Third Model Derringer

This model was designed by Alexander Thuer who was also responsible for Colt's first metallic cartridge conversion. It is often referred to as the "Thuer Model" for this reason. It is also chambered for the .41 rimfire cartridge and has a 2.5" barrel that pivots to the right (but not down) for loading. The Third Model has a more balanced appearance than its predecessors, and its commercial success (45,000 produced between 1875 and 1910) reflects this. The barrel on this model is stamped "Colt" in small block letters on the first 2,000 guns. The remainder of the production features the "COLT" in large italicized print. The ".41 Cal." is stamped on the left side of the frame. This model will be found with the barrel blued or plated in either silver or nickel and the bronze frame plated. The grips are varnished walnut.

First Variation, Early Production

This has a raised area on the underside of the frame through which the barrel screw passes, and the spur is not angled. Small block "Colt" lettering on barrel.

NOTE: Blued models will bring a premium over nickel in the same condition.

House Model Revolver

There are two basic versions of this model. They are both chambered for the .41 rimfire cartridge. The 4-shot version is known as the "Cloverleaf" due to the shape of the cylinder when viewed from the front. Approximately 7,500 of the nearly 10,000 House revolvers were of this 4-shot configuration. They are offered with a 1.5" or 3" barrel. The 1.5" length is quite rare, and some octagonal barrels in this length have been noted. The 5-shot round-cylinder version accounts for the rest of the production. It is found with serial numbers over 6100 and is offered with a 2-7/8" length barrel only. This model is stamped on the top strap "Pat. Sept. 19, 1871." This model has brass frames that were sometimes nickel-plated. The barrels are found either blued or plated. The grips are varnished walnut or rosewood. There were slightly fewer than 10,000 of both variations manufactured from 1871-1876.

Open Top Pocket Revolver

This is a .22-caliber rimfire, 7-shot revolver that was offered with either a 2-3/8" or a 2-7/8" barrel. The model was a commercial success, with over 114,000 manufactured between 1871 and 1877. There would undoubtedly have been a great deal more sold had not the cheap copies begun to flood the market at that time, forcing Colt to drop this model from the line. This revolver has a silver or nickel-plated brass frame and a nickel-plated or blued barrel and cylinder. The grips are varnished walnut. The cylinder bolt slots are found toward the front on this model. "Colt's Pt. F.A. Mfg. Co./Hartford, Ct. U.S.A." is stamped on the barrel and ".22 Cal." on the left side of the frame.

NOTE: Blued models will bring a premium over nickel in the same condition.

New Line Revolver .22

This was the smallest framed version of the five distinct New Line Revolvers. It has a 7-shot cylinder and a 2.25" octagonal barrel. The frame is nickel-plated, and the balance of the revolver is either nickel-plated or blued. The grips are of rosewood. There were approximately 55,000 of these made from 1873-1877. Colt also stopped production of the New Lines rather than try to compete with the "Suicide Specials." "Colt New .22" is found on the barrel; and ".22 Cal.," on the frame. The barrel is also stamped "Colt's Pt. F.A. Mfg.Co./Hartford, Ct. U.S.A."

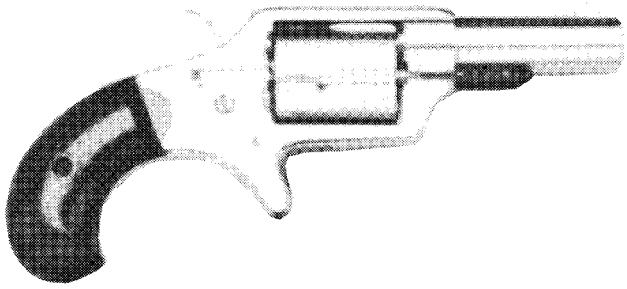
—	—	500	250	125

NOTE: Blued models will bring higher prices than nickel models in the same condition.

New Line Revolver .30

This is a larger version of the .22 New Line. The basic difference is the size, caliber, caliber markings, and the offering of a blued version with case colored frame. There were approximately 11,000 manufactured from 1874-1876.



Courtesy Wallis & Wallis, Lewes, Sussex, England

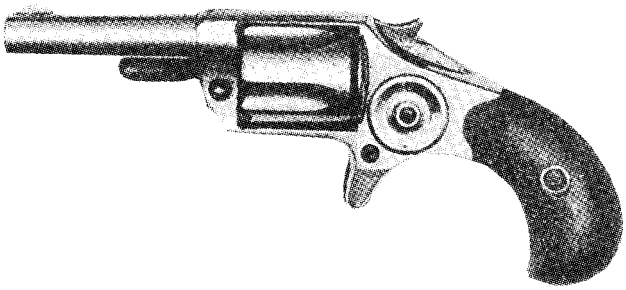
—	—	750	300	150

NOTE: Prices above are for nickel finish. Blued models will bring a premium of 100 percent.

New Line Revolver .32

This is the same basic revolver as the .30 caliber except that it is chambered for the .32-caliber rimfire and .32-caliber centerfire and is so marked. There were 22,000 of this model manufactured from 1873-1884. This model was offered with the rare 4" barrel, and this variation would be worth nearly twice the value of a standard model.



Courtesy Bonhams & Butterfields, San Francisco, California

—	1200	800	300	150

NOTE: Prices above are for nickel finish. Blued models will bring a premium of 100 percent.

New Line Revolver .38

There were approximately 5,500 of this model manufactured between 1874 and 1880. It is chambered for either the .38 rimfire or .38 centerfire caliber and is so marked. This model in a 4" barrel would also bring twice the value.

Courtesy Rock Island Auction Company

—	—	800	400	200

NOTE: Blued models will bring a premium over nickel in the same condition.

New Line Revolver .41

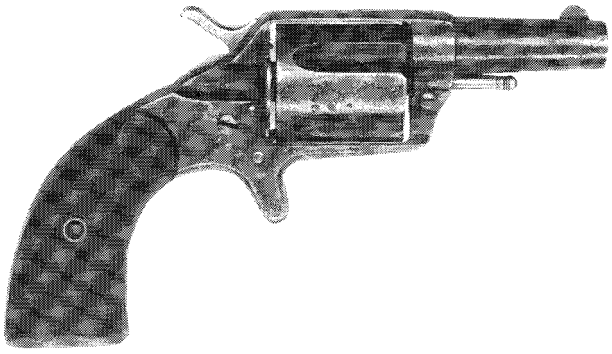
This is the "Big Colt," as it was sometimes known in advertising of its era. It is chambered for the .41 rimfire and the .41 centerfire and is so marked. The large caliber of this variation makes this the most desirable of the New Lines to collectors. There were approximately 7,000 of this model manufactured from 1874-1879. A 4"-barreled version would again be worth a 100 percent premium.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1000	550	300

NOTE: Prices above are for nickel finish. Blued models will bring a premium of 100 percent.

New House Model Revolver

This revolver is similar to the other New Lines except that it features a square-butt instead of the bird's-head configuration, a 2.25" round barrel without ejector rod, and a thin loading gate. It is chambered for the .32 (rare), .38, and the .41 centerfire cartridges. The finish was either full nickel-plated or blued, with a case colored frame. The grips are walnut, rosewood or (for the first time on a Colt revolver) checkered hard rubber, with an oval around the word "Colt." The barrel address is the same as on the other New Lines. The frame is marked "New House," with the caliber. There were approximately 4,000 manufactured between 1880-1886. .32 caliber model would bring a 10 percent premium.



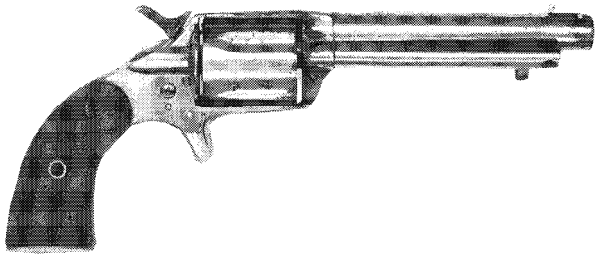
Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1000	450	250

NOTE: Prices above are for nickel finish. Blued models will bring a premium of 100 percent.

New Police Revolver

This was the final revolver in the New Line series. It is chambered for .32, .38, and .41 centerfire caliber. The .32 and .41 are quite rare. It is offered in barrel lengths of 2.25", 4.5", 5.5", and 6.5". An ejector rod is found on all but the 2.5" barrel. The finish is either nickel or blued and case colored. The grips are hard rubber with a scene of a policeman arresting a criminal embossed on them; thusly the model became known to collectors as the "Cop and Thug" model. The barrel stamping is as the other New Lines, and the frame is stamped "New Police .38." There were approximately 4,000 of these manufactured between 1882-1886.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Long Barrel Model with Ejector

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1400	700

NOTE: The .32 and .41 caliber versions of this model will bring a 40-50 percent premium. Blued models and models with 5.5" or 6.5" barrels will bring a premium. Short barrel model will bring about 50 percent of the listed prices.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

COLT'S SINGLE-ACTION ARMY REVOLVER

The Colt Single-Action Army, or Peacemaker as it is sometimes referred to, is one of the most widely collected and recognized firearms in the world. With few interruptions or changes in design, it has been manufactured from 1873 until the present. It is still available on a limited production basis from the Colt Custom Shop. The variations in this model are myriad. It has been produced in 30 different calibers and barrel lengths from 2.5" to 16", with 4.75", 5.5", and 7.5" standard. The standard finish is blued, with a case colored frame. Many are nickel-plated. Examples have been found silver- and gold-plated, with combinations thereof. The finest engravers in the world have used the SAA as a canvas to display their artistry. The standard grips from 1873-1883 were walnut, either oil-stained or varnished. From 1883 to approximately 1897, the standard grips were hard rubber with eagle and shield. After this date, at serial number 165000, the hard rubber grips featured the Rampant Colt. Many special-order grips were available, notably pearl and ivory, which were often checkered or carved in ornate fashion. The variables involved in establishing values on this model are extreme. Added to this, one must also consider historical significance, since the SAA played a big part in the formative years of the American West. Fortunately for those among us interested in the SAA, there are a number of fine publications available dealing exclusively with this model. It is my strongest recommendation that they be acquired and studied thoroughly to prevent extremely expensive mistakes. The Colt factory records are nearly complete for this model, and research should be done before acquisition of rare or valuable specimens.

For our purposes we will break down the Single-Action Army production as follows:

Antique or Black Powder, **1873-1898, serial number 1-175000**

The cylinder axis pin is retained by a screw in the front of the frame.

Pre-war, **1899-1940, serial number 175001-357859**

The cylinder axis pin is retained by a spring-loaded button through the side of the frame. This method is utilized on the following models, as well.

Post-war 2nd Generation, **1956-1978, serial number 0001SA-99999SA**

3rd Generation, **1978-Present, serial #SA1001.** A breakdown of production by caliber will follow the chapter. It is important to note that the rarer calibers and the larger calibers bring higher values in this variation.

NOTE: As a rule of thumb nickel guns will bring a *deduction* of 20-30 percent. For revolvers with 4.75" barrels add 10-15 percent. For checkered grips add 20 percent.

COLT *ANTIQUE* SINGLE-ACTION ARMY REVOLVER

1st Year Production "Pinched Frame" 1873 Only

It is necessary to categorize this variation on its own. This is one of the rarest and most interesting of all the SAAs—not to mention that it is the first. On this model the top strap is pinched or constricted approximately one-half inch up from the hammer to form the rear sight. The highest surviving serial number having this feature is #156, the lowest #1. From these numbers, it is safe to assume that the first run of SAAs were all pinched-frame models; but there is no way to tell how many there were, since Colt did not serial number the frames in the order that they were manufactured. An educated guess would be that there were between 50 and 150 pinched frame guns in all and that they were all made before mid-July 1873. The reason for the change came about on the recommendation of Capt. J.R. Edie, a government inspector who thought that the full fluted top strap would be a big improvement in the sighting capabilities of the weapon. The barrel length of the first model is 7.5"; the standard caliber, .45 Colt; and the proper grips were of walnut. The front sight blade is German silver. Needless to say, this model will rarely be encountered; and if it is, it should never be purchased without competent appraisal.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	60000	45000	30000	10000

Early Military Model 1873-1877

The serial number range on this first run of military contract revolvers extends to #24000. The barrel address is in the early script style with the # symbol preceding and following. The frame bears the martial marking "US," and the walnut grips have the inspector's cartouche stamped on them. The front sight is steel as on all military models; the barrel length, 7.5". The caliber is .45 Colt, and the ejector rod head is the bull's-eye or donut style with a hole in the center of it. The finish features the military polish and case colored frame, with the remainder blued. Authenticate any potential purchase; many spurious examples have been noted.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
35000	25000	12000	8000	5000

NOTE: Certain 3-digit and 4-digit serial numbers will command a substantial premium. Seek an expert appraisal prior to sale.

Early Civilian Model 1873-1877

This model is identical to the Early Military Model but has no military acceptance markings or cartouches. Some could have the German silver front sight blade. The early bull's-eye ejector rod head is used on this model. The Civilian Model has a higher degree of polish than is found on the military models, and the finish on these early models could be plated or blued with a case colored frame. This model also has a script barrel address. The grips are standard one-piece walnut. Ivory-grip models are worth a premium.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
30000	24000	12000	9000	6000

NOTE: Certain 3-digit and 4-digit serial numbers will command a substantial premium. Seek an expert appraisal prior to sale.

.44 Rimfire Model 1875-1880

This model was made to fire the .44 Henry Rimfire cartridge. It was to be used as a compatible companion sidearm to the Henry and Winchester 1866 rifles that were used extensively during this era. However, this was not the case; and the .44 Rimfire was doomed to economic failure as soon as it appeared on the market. By that time, it had already been established that large-caliber centerfire cartridges were a good deal more efficient than their rimfire counterparts. The large-caliber rimfires were deemed obsolete before this Colt ever hit the market. The result of this was that Colt's sales representatives sold most of the production to obscure banana republics in South and Central America, where this model received much abuse. Most had the original 7.5" barrels cut down; and nearly all were denied even the most basic maintenance, making the survival rate of this model quite low. All this adds to its desirability as a collector's item and makes the risk of acquiring a fake that much greater. This model is unique in that it was the only SAA variation to have its own serial number range, starting with #1 and continuing to #1892, the latest known surviving specimen. The block style barrel markings were introduced during this production run. At least 90 of these revolvers were converted by the factory to .22 rimfire, and one was shipped chambered for .32 rimfire.

40000	33000	17000	7500	4000

VALUE TRACKER: FIRST GENERATION COLT SINGLE ACTION ARMY REVOLVERS

Probably the most eagerly-sought and most immediately recognizable revolver in the world, the First Generation (1873-1941) Colt Single-Action Army is a consistently powerful performer in the auction arena. The following examples show the broad range of values that these revolvers command. Note how even minor aftermarket alterations can sometimes, but not always, affect the value of these legendary revolvers. Also, note the importance of condition and the effect it has on realized prices.

RIA	9/16-18/06	**3508**	Colt SAA Frontier Six Shooter #157532 (1894), .44-40, 4.75" bbl w/blade front sight and notch rear sight, rubber Colt grips w/checkering worn smooth, matching numbers, traverse cylinder latch, "very good," metal cleaned to satin gray steel, some pitting, action very good.	**$2,250-$3,500**	**$2,875**

Late Military Model 1878-1891

The later Military Models are serial numbered to approximately #136000. They bear the block-style barrel address without the # prefix and suffix. The frames are marked "US," and the grips have the inspector's cartouche. The finish is the military-style polish, case colored frame; and the remainder, blued. Grips are oil-stained walnut. On the military marked Colts, it is imperative that potential purchases be authenticated as many fakes have been noted.

Exc.	V.G.	Good	Fair	Poor
60000	35000	14000	10000	6000

NOTE: Revolvers produced from 1878 to 1885 will command a premium. Seek an expert appraisal prior to sale.

Artillery Model 1895-1903

A number of "US" marked SAAs were returned either to the Colt factory or to the Springfield Armory, where they were altered and refinished. These revolvers have 5.5" barrels and any combination of mixed serial numbers. They were remarked by the inspectors of the era and have a case colored frame and a blued cylinder and barrel. Some have been noted all blued within this variation. This model, as with the other military marked Colts, should definitely be authenticated before purchase. Some of these revolvers fall outside the 1898 antique cutoff date that has been established by the government and, in our experience, are not quite as desirable to investors. They are generally worth approximately 20 percent less.

Exc.	V.G.	Good	Fair	Poor
18000	12500	8000	4000	3000

London Model

These SAAs were manufactured to be sold through Colt's London Agency. The barrel is stamped "Colt's Pt. F.A. Mfg. Co. Hartford, Ct. U.S.A. Depot 14 Pall Mall London." This model is available in various barrel lengths. They are generally chambered for .45 Colt, .450 Boxer, .450 Eley, .455 Eley, and rarely .476 Eley, the largest of the SAA chamberings. A good many of these London Models were cased and embellished, and they should be individually appraised. This model should be authenticated as many spurious examples have been noted.

Exc.	V.G.	Good	Fair	Poor
22000	15000	10000	4500	2000

Frontier Six-Shooter 1878-1882

Several thousand SAAs were made with the legend "Colt's Frontier Six Shooter" acid-etched into the left side of the barrel instead of being stamped. This etching is not deep, and today collectors will become ecstatic if they discover a specimen with mere vestiges of the etched panel remaining. These acid-etched SAAs are serial numbered #45000-#65000. They have various barrel lengths and finishes, but all are chambered for the .44-40 caliber.

40000	20000	14000	7000	5000

Sheriff's or Storekeeper's Model 1882-1898

This model was manufactured with a short barrel (2.5"-4.75"). Most have 4" barrels. It features no ejector rod or housing, and the frame is made without the hole in the right forward section to accommodate the ejector assembly. The Sheriff's or Storekeeper's Model is numbered above serial #73000. It was manufactured with various finishes and chambered for numerous calibers. This model continued after 1898 into the smokeless or modern era. Examples manufactured in the pre-war years are worth approximately 20 percent less. Although faking this model is quite difficult, it has been successfully attempted.

35000	22000	14000	9000	5000

Flattop Target Model 1888-1896

This model is highly regarded and sought after by collectors. It is not only rare (only 925 manufactured) but is an extremely attractive and well-finished variation. It is chambered for 22 different calibers from .22 rimfire to .476 Eley. The .22 rimfire, .38 Colt, .41, and .45 Colt are the most predominant chamberings. The 7.5" barrel length is the most commonly encountered.

The serial number range is between #127000-#162000. Some have been noted in higher ranges. The finish is all blued, with a case colored hammer. The checkered grips are either hard rubber or walnut. The most readily identifying feature of the flattop is the lack of a groove in the top strap and the sight blade dovetailed into the flattop. The front sight has a removable blade insert. The values given are for a standard production model chambered for the calibers previously mentioned as being the most common. It is important to have other calibers individually appraised as variance in values can be quite extreme.

Exc.	V.G.	Good	Fair	Poor
35000	25000	15000	8000	4000

NOTE: Nickel models will command a premium.

Bisley Model 1894-1915

This model was named for the target range in Great Britain, where their National Target Matches were held since the nineteenth century. The model was designed as a target revolver with an odd humped-back grip that was supposed to better fill the hand while target shooting. It is also easily identified by the wide low profile hammer spur, wide trigger, and the name "Bisley" stamped on the barrel. The Bisley production fell within the serial number range #165000-#331916. There were 44,350 made.

It was offered in 16 different chamberings from .32 Colt to .455 Eley. The most common calibers were .32-20, .38-40, .41, .44-40, and .45 Colt. The barrel lengths are 4.75", 5.5", and 7.5". The frame and hammer are case-colored; the remainder, blued. Smokeless powder models produced after 1899 utilized the push-button cylinder pin retainer. The grips are checkered hard rubber. This model was actually designed with English sales in mind; and though it did sell well over there, American sales accounted for most of the Bisley production. The values we provide here cover the standard calibers and barrel lengths. Rare calibers and/or other notable variations can bring greatly fluctuating values.

9000	6500	4500	2500	1200

Bisley Model Flattop Target 1894-1913

This model is quite similar to the Standard Bisley Model, with the flattop frame and dovetailed rear sight feature. It also has the removable front sight insert. It has an all-blued finish with case-colored hammer only and is available with a 7.5" barrel. Smokeless powder models produced after 1899 utilized the push-button cylinder pin retainer. The calibers are the same as the standard Bisley. Colt manufactured 976 of these revolvers. The advice regarding appraisal would also apply.

25000	16000	9500	3500	1800

NOTE: Nickel models will command a premium.

Standard Civilian Production Models 1876-1898

This final designated category for the black powder or antique SAAs includes all the revolvers not previously categorized. They have barrel lengths from 4.75", 5.5", and 7.5" and are chambered for any one of 30 different calibers. The finishes could be blued, blued and case colored, or plated in nickel, silver, gold, or combinations thereof. Grips could be walnut, hard rubber, ivory, pearl, stag, or bone. The possibilities are endless. The values given here are for the basic model, and we again strongly advise securing qualified appraisal when not completely sure of any model variation.

NOTE: For Standard Civilian Production Models with screw-in frame, serial number to 163,000 add a 25-100 percent premium depending on year built. Seek an expert appraisal prior to sale.

The above chart covers the production by caliber of the Single-Action Army Revolvers manufactured between 1873 and 1940. These are the antique and the pre-war firearms. This chart readily informs us as to which are the rare calibers.

weapon made prior to this date is considered an antique and, as such, not subject to the restraints placed on collectors and dealers by the Gun Control Act of 1968. This is important because firearms falling into this category will usually bring higher values due to the demand by pure investors who do not relish paperwork on collectible investments. There will be those who disagree with me on this line of reasoning, but my experience tells me that it is correct.

COLT PRE-WAR SINGLE-ACTION ARMY REVOLVER 1899-1940

NOTE: A surprising number of Colt pistols are still found in their original boxes, even older models. This can add 100 percent to the value of the pistol.

Standard Production Pre-war Models

The 1899 cutoff has been thoroughly discussed, but it is interesting to note that the actual beginning production date for smokeless models was 1900. The pre-war Colts are, all in all, quite similar to the antiques—the finishes, barrel lengths, grips, etc. Calibers are also similar, with the exception of the obsolete ones being dropped and new discoveries added. The most apparent physical difference between the smokeless powder and black powder models is the previously discussed method of retaining the cylinder axis pin. The pre-war Colts utilized the spring-loaded button through the side of the frame. The black powder models utilized a screw in the front of the frame. The values we furnish for this model designation are for these standard models only. The serial number range on the pre-war SAAs is 175001-357859. Note that any variation can have marked effects on value fluctuations, and qualified appraisal should be secured. Note: Scarce chamberings command 30 percent to 100 percent premium.

10000	7000	3500	2500	1500

Long Fluted Cylinder Model 1913-1915

Strange as it may seem, the Colt Company has an apparent credo they followed to never throw anything away. That credo was never more evident than with this model. These Long Flute Cylinders were actually left over from the model 1878 Double-Action Army Revolvers. Someone in the hierarchy at Colt had an inspiration that drove the gunsmiths on the payroll slightly mad: to make these cylinders fit the SAA frames. There were 1,478 of these Long Flutes manufactured. They are chambered for the .45 Colt, .38-40, .32-20, .41 Colt, and the .44 Smith & Wesson Special. They were offered in the three standard barrel lengths and were especially well-polished, having what has been described as Colt's "Fire Blue" on the barrel and cylinder. The frame and hammer are case colored. They are fitted with checkered hard rubber grips and are particularly fine examples of Colt's craft. Rare.

COLT POST-WAR SINGLE-ACTION ARMY REVOLVER (AKA SECOND GENERATION)

NOTE: A surprising number of Colt pistols are still found in their original boxes, even older models. This can add 100 percent to the value of the pistol.

Standard Post-war Model 1956-1975

In 1956 the shooting and gun-collecting fraternity succeeded in convincing Colt that there was a market for a re-introduced SAA. The revolver was brought back in the same external configuration. The only changes were internal. The basic specifications as to barrel length and finish availability were the same. The calibers available were .38 Special, .357 Magnum, .44 Special, and .45 Colt. The serial number range of the re-introduced 2nd Generation, as it is sometimes known, Colt is #000ISA-73000SA. Values for the standard post-war Colts are established by four basic factors: caliber (popularity and scarcity), barrel length, finish, and condition. Shorter barrel lengths are generally more desirable than the 7.5". The .38 Special is the rarest caliber, but the .45 Colt and .44 Special are more sought after than the .357 Magnum. Special feature revolvers, such as the 350 factory-engraved guns produced during this period, must be individually appraised. The ivory situation in the world today has become quite a factor, as ivory grips are found on many SAAs. We will attempt to take these factors into consideration and evaluate this variation as accurately and clearly as possible. Remember as always, when in doubt secure a qualified appraisal.

NOTE: 4.75" barrel add 25 percent. 5.5" barrel add 15 percent. Nickel finish add 20 percent. Ivory grips add $250.

Sheriff's Model 1960-1975

Between 1960 and 1975, there were approximately 500 Sheriff's Models manufactured. The first of these were marketed by Centennial Arms. They have 3" barrels and no ejector rod assemblies. The frames were made without the hole for the ejector rod to pass through. They were blued, with case colored frames; 25 revolvers were nickel-plated and would bring a sizable premium if authenticated. The barrels are marked "Colt Sheriff's Model." The serial number has an "SM" suffix. They are chambered for the .45 Colt cartridge.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
3000	2200	1800	1200	850	600

NOTE: Nickel finish add 20 percent.

Buntline Special 1957-1975

The "Buntline Special" was named after a dime novelist named Ned Buntline, who supposedly gave this special long barrel revolver to Wyatt Earp. The story is suspected to be purely legend as no Colt records exist to lend it credence. Be that as it may, the Colt factory decided to take advantage of the market and produced the 12" barreled SAA from 1957-1974. There were approximately 3,900 manufactured. They are chambered for the .45 Colt cartridge and are offered in the blued and case colored finish. Only 65 Buntlines are nickel-plated, making this an extremely rare variation that definitely should be authenticated before purchase. Walnut grips are the most commonly noted, but they are also offered with the checkered hard rubber grips. The barrels are marked on the left side "Colt Buntline Special .45."

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
2000	1650	1250	850	600	500

NOTE: Nickel finish add 60 percent.

New Frontier 1961-1975

The New Frontier is readily identified by its flattop frame and adjustable sight. It also has a high front sight. Colt manufactured approximately 4,200 of them. They are chambered for the .357 Magnum, .45 Colt, .44 Special (255 produced), and

rarely (only 49 produced) in .38 Special. A few were chambered for the .44-40 cartridge. The 7.5" barrel length is by far the most common, but the 4.75" and 5.5" barrels are also offered. The standard finish is case colored and blued. Nickel-plating and full blue are offered but are rarely encountered. Standard grips are walnut. The barrel is stamped on the left side "Colt New Frontier S.A.A." The serial has the "NF" suffix.

NIB	Exc.	V.G.	Good	Fair	Poor

New Frontier Buntline Special 1962-1967

This model is rare, as Colt only manufactured 70 during this five-year period. They are similar to the standard Buntline, with a 12" barrel. They are chambered for .45 Colt only.

NIB	Exc.	V.G.	Good	Fair	Poor
4000	3000	2000	1500	1000	700

COLT THIRD GENERATION SINGLE-ACTION ARMY 1976-1981

In 1976 Colt made some internal changes in the SAA. The external configuration was not altered. The serial number range began in 1976 with #80000SA, and in 1978 #99999SA was reached. At this time the suffix became a prefix, and the new serial range began with #SA01001. This model's value is determined in much the same manner as was described in the section on the 2nd Generation SAAs. Caliber, barrel length, finish, and condition are once again the four main determining factors. The prevalence of special-order guns was greater during this period, and many more factory-engraved SAAs were produced. Colt's Custom Shop was quite active during this period. We feel that it is not advisable to undertake evaluation of specially embellished guns and strongly advise that competent appraisal be secured on any firearms that deviate from the standard. There are, quite frankly, too many fraudulent Colt SAAs out there; and the financial risks are great.

Sheriff's Model 3rd Generation

This model is similar to the 2nd Generation Sheriff's Model. The serial number and the fact that this model is also chambered for the .44-40 are the only external differences. Colt offered this model with interchangeable cylinders—.45 Colt/.45 ACP or .44-40/.44 Special—available in 3" barrel, blued and case colored finish standard.

NIB	Exc.	V.G.	Good	Fair	Poor
1050	875	750	600	450	400

NOTE: Interchangeable cylinders add 30 percent. Nickel finish add 10 percent. Ivory grips add $250.

Buntline Special 3rd Generation

This is the same basic configuration as the 2nd Generation with the 12" barrel. Standard finish blued and case-colored, it is chambered for .45 Colt and has checkered hard rubber grips.

NIB	Exc.	V.G.	Good	Fair	Poor
1050	875	750	600	450	400

NOTE: Nickel finish add 20 percent.

New Frontier 3rd Generation

This model is similar in appearance to the 2nd Generation guns. The 3rd Generation New Frontiers have five-digit serial numbers; the 2nd Generation guns, four-digit numbers. That and the calibers offered are basically the only differences. The 3rd Generations are chambered for the .44 Special and .45 Colt and are rarely found in .44-40. Barrel lengths are 7.5" standard, with the 4.75" and 5.5" rarely encountered.

NIB	Exc.	V.G.	Good	Fair	Poor
950	725	650	550	500	400

NOTE: .44-40 add 20 percent. 4.75" barrel add 35 percent. 5.5" barrel add 25 percent.

COLT RECENT PRODUCTION SINGLE-ACTION ARMY 1982-PRESENT

NOTE: A surprising number of Colt pistols are still found in their original boxes, even older models. This can add 100 percent to the value of the pistol.

Standard Single-Action Army

The SAA, it is sad to note, has all but faded from the firearms picture. They are currently available as a special-order custom shop proposition. The cost is great; and the availability, low. The heyday of one of the most venerable firearms of them all is pretty much at an end. The SAAs have been available in .357 Magnum, .38-40, .44-40, .44 Special, and .45 Colt. Barrels were available in 3" through 10" lengths. The finishes are nickel-plated and blued, with case-colored frames. A number of optional finishes are available on request. Grips are available on a custom order basis. This model is available on special-order only.

NOTE: As of 2000 the Custom Shop is offering this revolver in the configurations listed:

P1840—Blued .45 Colt with 4.75" barrel.
P1841—Nickel .45 Colt with 4.75" barrel.
P1850—Blued .45 Colt with 5.5" barrel.
P1856—Nickel .45 Colt with 5.5" barrel.
P1940—Blued .44-40 with 4.75" barrel.
P1941—Nickel .44-40 with 4.75" barrel.
P1950—Blued .44-40 with 5.5" barrel.
P1956—Nickel .44-40 with 5.5" barrel.
P1640—Blued .357 Magnum with 4.75" barrel.
P1650—Blued .357 Magnum with 5.5" barrel.

Optional Features:

Nickel finish add $125. Royal blue finish add $200. Mirror brite finish add $225. Gold plate add $365. Silver plate add $365. Class A engraving add $875. Class B engraving add $1,200. Class C engraving add $1,500. Class D engraving add $1,750. Buntline engraving add 15 percent.

COLT SCOUT MODEL

NOTE: A surprising number of Colt pistols are still found in their original boxes, even older models. This can add 100 percent to the value of the pistol. My thankks to Bruce Buckner for his suggestions for and corrections to this section.

Anyone wishing to procure a factory letter authenticating a Single-Action Army should do so by writing to: COLT HISTORIAN, P.O. BOX 1868, HARTFORD, CT 06101. There is a charge of $50 per serial number for this service. If Colt cannot provide the desired information, $10 will be refunded. Enclose the Colt model name, serial number, and your name and address, along with the check.

Frontier Scout 1957-1971

This is a scaled-down version of the SAA that is chambered for the .22 LR with an interchangeable .22 Magnum cylinder. It is offered with a 4.75", or a 9.5" barrel. The frame is alloy. First year production frame were duotone with frame left in the white and the balance of the revolver blued. All blue models and wood grips became available in 1958. In 1961 the duotone model was dropped from production. All the Q series guns were offered in duotone finish; F series guns were made in duotone and full blue. A .22 Magnum model was first offered in 1959. In 1964 dual cylinders were introduced. These revolvers have "Q" or "F" serial number suffixes. In 1960 the "K" series Scout was introduced and featured a heavier frame, nickel plating, and wood grips. The majority of commemorative revolvers are of this type. This series was discontinued in 1970. Prices are about 15 percent higher than for the "Q" and "F" series guns.

NIB	Exc.	V.G.	Good	Fair	Poor
450	325	200	175	125	90

NOTE: 9.5" Buntline add 50 percent. Extra cylinder add 10 percent.

Peacemaker & New Frontier .22

This model is similar to the Frontier Scout, with a steel case-colored or blued frame. Fitted with old style black plastic eagle grips.Peacemaker 22 and New Frontier 22 revolvers were initially offered with 4.75, 6 and 7.5 inch barrels (Buntline). After about one year of production the 4.75 inch barrel was discontinued and a 4.4 inch barrel was offered in each model. It also has an interchangeable .22 Magnum cylinder.

The Peacemaker 22 was only available with a steel receiver with a color-casehardened finish. The grip frames were alloy. The same is true of the New Frontier 22 revolvers except that (as noted in the book), the New Frontier 22 GS series was available with color-casehardened or blue receivers. Both Peacemaker 22 and New Frontier 22 revolvers were available in the single caliber (.22 LR only) and dual caliber (.22 LR and .22 Magnum) models. The factory had separate model numbers for these variations. Also, the factory offered "P" series or "'62" model Frontier Scouts and Buntline Scouts. This was a significant model variation.

Most of these revolvers had a "G" suffix although some built in 1974 had a "L" suffix. In 1982 through 1986 a New Frontier model with cross-bolt safety was offered. This model is often referred to as the "GS" series. This revolver was offered with adjustable sights only. No Peacemakers were offered in this series.

COLT'S FRONTIER SCOUT .22 CALIBER REVOLVER

BY BRUCE A. BUCKNER, JR.

Interest in the "Old West" and single action revolvers was intense in the 1950's. Western movies were very popular before World War II and afterward. The expansion of television into millions of homes brought even more interest. TV shows like *Paladin, Maverick, Cheyenne, Bounty Hunter, The Lone Ranger, The Cisco Kid*, and probably the greatest of them all (certainly the longest running) *Gunsmoke* fanned the interest in single actions. Stars like John Wayne, Tex Ritter, William Boyd, Steve McQueen, James Garner, Roy Rogers and Gene Autry were the idols of youngsters of that era. Kids dressed up in "cowboy duds" and played "cowboys and Indians" with cap guns that resembled single actions. Fast draw competitions became popular.

Colt's Manufacturing Co. had ceased full production of the Single Action Army (SAA) revolver shortly before World War II, but small numbers of revolvers were still being assembled until about 1953. In that year, Mr. William R. Wilson met with the management at Colt and was assured that the SAA was gone forever. Mr. Wilson then started The Great Western Arms Company, which produced the Great Western Frontier single action revolver in several variations. The GW Frontier was very much a copy of the Colt SAA except for the firing pin arrangement. The Frontier was chambered for several cartridges, the .22 Long Rifle (LR) being the most popular. Major General Julian Hatcher of the staff of *The American Rifleman* magazine examined the GW Frontier revolver and found it to be of good quality (September, 1954). Unfortunately for Mr. Wilson's company, in 1955 Colt reintroduced the Single Action Army and, at about the same time, Sturm, Ruger & Co. brought out the Blackhawk single action revolver. Production of Great Western revolvers faltered and eventually ceased production around 1961 after about 23,000 revolvers had been produced.

The Great Western .22 LR revolver was relatively expensive at a list price of $97.50 (though it was heavily discounted in later years) and relatively hefty at about 44 ounces. At the time there was a lot of interest in revolvers chambered for the .22 LR. Reloading by most shooting enthusiasts was really in its infancy, and if a fellow wanted to shoot a lot and couldn't afford center fire ammo, the .22 LR was the obvious choice. Soon after the introduction of the GW Frontier, Sturm, Ruger & Co. introduced the Single Six, a single action revolver chambered for the .22 LR. It was reviewed by General Hatcher in *The American Rifleman* in the March 1954 issue and was found to be a well made gun and accurate with a retail price of $57.50 and a weight of about 36 ounces.

In the midst of all this, Colt reintroduced the Single Action Army revolver in 1955. It was a very popular revolver, but even then, the price was high. *The American Rifleman* for December 1955 carried an advertisement for the Colt SAA in .38 Special or .45 Colt for $125.00. Colt decided that they needed a .22 caliber single action revolver to capitalize on the interest in .22s and to compete with Ruger in the rimfire arena. Thus, the Colt Frontier Scout was born in 1957. The Frontier Scout was a little smaller than a SAA and weighed about 24 ounces. And its price was within the reach of most sportsmen, at $49.50 retail.

As a teenager in the 1950's with a father who was a dedicated upland game hunter, I was exposed to guns and shooting at an early age. Dad's interest pretty much stuck to shotguns and hunting, but I became interested in everything that shot. My first purchase was a Winchester 69A .22 rifle and that was followed shortly by a Browning take-down rifle in .22 Short. About that time I went off to serve my country in uniform for a few years. While I was stationed in California, I bought my very first Colt. It was a Frontier Scout, a K model with nickel finish and wood stocks. (By the way, did you know that even in 1963 California had a five-day waiting period for purchasing a handgun? I found it hard to believe but it was true. I had to wait five days before picking up my new purchase.) I shot that little revolver quite a lot but eventually it got traded off for something I thought I needed more. Since then, however, I have gathered many more Frontier Scouts and learned much about them. I would like to share some of my experience with you:

Q Series

The Frontier Scout revolver was introduced in 1957. This was the Q series, also known as the "Duo-Tone" model. These were characterized by the "in-the-white" aluminum alloy receiver and by serial numbers that began with the letter "Q". The cylinders and barrels were made of steel and blued. The grip frame was also aluminum but finished dark to match the barrel and cylinder. The Q serial numbered revolvers were made for about four years and were offered only in .22 Long Rifle and with 4-3/4-inch barrels. Grips were usually black plastic but a small number of revolvers were fitted with plain walnut stocks with no medallions.

These Q-Series revolvers were shipped from the factory in cardboard boxes, which were similar to boxes used for other Colt firearms during the same time. During the 1950s and 1960s this was a two-piece box with a top covered in a wood grain paper with the Colt logo in gold. The inside of the box was lined with green paper (later black) and had Colt logos in gold. (Later boxes with black paper did not have the logo on the inside bottom). An instruction sheet or booklet and warranty card was always included with the revolver. Other paper items were sometimes included such as NRA membership application cards and gun care flyers. Usually a barrel cleaning brush also accompanied the revolver. The gun was wrapped in heavy brown, rust preventive paper.

F Series

The F series Frontier Scout followed the Q revolvers and for a time was produced concurrently with them. Early F series guns had the same "in-the-white" receivers as the Q revolvers but were later offered in all blue finish. (Duo-Tone revolver production ceased in 1961 with about 40,000 having been made.) Barrel lengths were 4-3/4 inches and 9-1/2 inches (the Buntline Scout). Chamberings were .22 Long Rifle and .22 Winchester Magnum Rimfire and as combinations with cylinders in both calibers. The combination revolvers (introduced in the middle 1960's) were known as "dual cylinder" guns and were marked "22 CAL" on the barrel. The receivers and grips frames continued to be made of aluminum alloy. The grips, boxes and papers usually were the same as the Q series guns. However, F series Frontier Scouts with dual cylinders were usually shipped in a different box, which was tan in color and had a cut out in the bottom of the box for the revolver and the extra cylinder. Conversely, dual cylinder Buntlines were shipped in extra long boxes with wood-grain paper coverings like the single caliber Scouts. F series revolvers were sold from 1958 until 1971 with about 246,000 produced.

K Series

The K series Frontier Scouts were introduced in 1960 and offered in a bright nickel finish with a heavier receiver and grip frame than the Q or F series. Receivers and grip frames were made of Zamak alloy. Barrel lengths and chamberings were similar to the F revolvers. All K series revolvers were fitted with plain walnut grips and most were shipped from the factory in wood presentation cases lined with red fabric. The cases were marked on the outside with an impressed Colt logo in the center of the lid and were "French-fitted". This consisted of gluing a cardboard cutout of the revolver in the bottom of the case and covering it with red cloth. Usually the cloth in the inside lid was red satin with the Colt logo in gold and red velvet was used for the bottom where the gun rested. Beginning with the K series revolvers, Colt began shipping pairs of guns with consecutive serial numbers in addition to single revolvers. Pairs were two Frontier Scouts, one Frontier Scout and one Buntline Scout or two Buntline Scouts. Calibers were mixed as well; some pairs were both .22 LR, some were both 22 Magnum and some were one gun of each caliber. In most cases, special wood presentation boxes for two revolvers were used. In ten years of production about 44,000 revolvers were produced in the K serial number series.

P Series

The P series or "Frontier Scout '62" revolvers (introduced in 1962) featured a new "Midnight Blue" finish and the heavier Zamak alloy receiver and grip frame of the K series. The new finish on the grip frame and receiver was apparently a painted or dipped coating that was glossy black. Unfortunately, this finish was highly variable with regards to durability. Many revolvers have survived with mint finish but others, even some unfired specimens, have suffered significant damage from minor handling. Barrel lengths and chamberings were similar to the F and K series revolvers. Guns were fitted with synthetic grips called "Stag-Lite" which looked much like real stag horn material with silver colored Colt medallions. The early grips had a nickel-plated screw and escutcheon (size was similar to the center fire Single Action Army grip parts), and the later ones used a smaller blued screw and escutcheon similar to the other Frontier Scouts.

There were many variations in the boxes for the P series revolvers. The earliest P revolvers were shipped in a red, white and black "picture" box which had six round pictures of cowboys, Indian fighters, gunslingers and others on the lid with a revolver shaped cutout in the box bottom. The later guns were generally shipped in tan cardboard boxes with revolver shaped cutouts in the box bottom and some of these had additional cutouts for the extra magnum cylinder. However, some P series Frontier Scouts and most P Buntlines were shipped in regular wood grain boxes like other Colts and some were shipped in wood cases. Like the K series guns, many consecutive serial numbered sets were produced and these were usually shipped in the wood cases. One very interesting consecutive set was called the "Matched Pair" and consisted of two .22 LR Frontier Scouts in a special box. This set is quite rare today. The P series revolvers were produced from 1962 until 1971 with a total of about 68,000 guns.

G (L) Series

The G series revolvers were called the Peacemaker 22 and New Frontier 22 and were introduced in 1970. These guns were a major change in Colt's .22 single action revolver line. They more resembled the full size Single Action Army revolvers because the receivers were made of steel and were handsomely finished in a nice case hardened coloring. (Grip frames continued to be made of aluminum alloy.) The Peacemaker 22 had fixed sights like the previous Frontier Scouts, but the New Frontier 22 used a ramped front sight and the adjustable Accro rear sight that was used on many other Colt handguns at the time. All revolvers were marked ". 22" on the barrels but were shipped either with the .22 LR cylinder alone or as combinations with .22 LR and 22 Magnum cylinders. (No .22 Magnum-only G series revolvers were produced.) Barrel lengths were 4-3/4 inches (or 4.4 inches) or six inches. Tthe Buntline had a 7-1/2-inch barrel. The 4-3/4-inch barreled revolvers were only made for about the first year or so of production. Then the barrels were shortened to 4.4 inches.

A lot of confusion exists around the short barrel length, primarily because Colt continued for many years to mark the boxes with "4 ¾ inch" even though the actual length was 4.4 inches. The Peacemaker 22 with the true 4-3/4-inch barrel has become quite a collector's item because of the popularity of this revolver model and its rather limited production. A new shipping box was used for the G series guns. At first this was a yellow box with white bottom, which had a nicely descriptive label on one end. Then in about 1973 or 1974 these guns began to be shipped in Styrofoam boxes with the wood grain outer paper shell. These were similar to the boxes used for all other Colts at the time. The L series (Peacemaker 22 and New Frontier 22) were a sort of subset of the G revolvers. They were identical in every respect to the G revolvers, except that the serial numbers began with a capital "L". L series revolvers were only produced in 1974. It is generally thought that all L revolvers were shipped as dual cylinder guns. All barrel lengths were produced in the L series except (maybe) the 7-1/2- inch New Frontier Buntline 22. Total production of G and L series revolvers was about 190,000 and lasted from 1970 until 1977.

GS Series

Production of the Peacemaker 22 ceased in 1977 or 1978. Production of the New Frontier 22 ceased as well but was started up again in 1982 with the GS series. These were the same as the earlier G series New Frontiers with the addition of a cross-bolt safety which, when activated, would prevent the hammer contacting the firing pin. The GS revolvers were only produced in .22 LR. Barrel lengths were 4.4 inches, six inches and 7-1/2 inches. Initially, all production was the same blue and color case hardened finish as the earlier G series. However, in the last year of production the finish was changed to "Full Blue." In the Full Blue finish, the receiver and grip frame were not highly polished like the barrel and cylinder but finished in a dull dark blue or black. One further (and scarce) variation of the GS Full Blue guns had a matt finished barrel. The only examples I have seen of this variation had 7-1/2 inch barrels. Interestingly, the 1982 factory price list had an entry for the New Frontier 22 with a Coltguard finish. However, only a few prototype revolvers with this finish are known, and it is likely that these were never actually produced for commercial sale.

The Colt Frontier Scout and related models offers a fertile field for the gun collector. Since they were made for a relatively limited time, it is possible for the searcher to find representative specimens of most variations. On the other hand, there are enough unusual types to keep the collector's interest up and the prices are much more moderate than those of the larger Single Action Army revolvers. My personal favorites are the consecutive serial numbered sets in the wood presentation cases. They are among the handsomest and scarcest of the Frontier Scouts.

Note: The preceding remarks are dedicated to the memory of Don Wilkerson, whose book *The Colt Frontier Scout, Peacemaker and New Frontier 22 Caliber Revolvers* (Walsworth Publishing Co., 1993) is widely regarded as the foremost reference work on this subject; and to Kathleen Hoyt and Beverly Haynes, whose work at the Colt Historical Department is so necessary to collectors of Colt's firearms. I would also like to thank well-known firearms collector Robert Deubell for the information he provided on Great Western revolvers.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Scout Model SAA 1962-1971

This is basically a scaled-down version of the SAA chambered for the .22 LR cartridge. This model is offered with a 4.75", 6", or 7" barrel. The earlier production has case-colored frames with the remainder blued; later production is all blued. Grips are checkered hard rubber. This model was discontinued in 1986.

COLT ANTIQUE LONG ARMS

Berdan Single-Shot Rifle

This is a scarce rifle on today's market. There were approximately 30,200 manufactured, but nearly 30,000 of them were sent to Russia. This rifle was produced from 1866-1870. It is a trapdoor-type action chambered for .42 centerfire. The standard model has a 32.5" barrel; the carbine, 18.25". The finish is blued, with a walnut stock. This rifle was designed and the patent held by Hiram Berdan, Commander of the Civil War "Sharpshooters" Regiment. This was actually Colt's first cartridge arm. The 30,000 rifles and 25 half-stocked carbines that were sent to Russia were in Russian Cyrillic letters. The few examples made for American sales have Colt's name and Hartford address on the barrel.

Colt-Franklin Military Rifle

This is a rifle that was not a successful venture for Colt. The patents were held by William B. Franklin, a vice-president of the company. This was a bolt-action rifle with a primitive, gravity-fed box magazine. It is chambered for the .45-70 government cartridge, has a 32.5" barrel, and is blued, with a walnut stock. The rifle has the Colt Hartford barrel address and is stamped with an eagle's head and U.S. inspectors marks. There were only 50 of these rifles produced, and it is believed that they were prototypes intended for government sales. This was not to be, and production ceased after approximately 50 were manufactured in 1887 and 1888.

Colt-Burgess Lever-Action Rifle

This represented Colt's only attempt to compete with Winchester for the lever-action rifle market. It is said that when Winchester started to produce revolving handguns for prospective marketing, Colt dropped the Burgess from its line. This rifle is chambered for .44-40. It has a 25.5" barrel and a 15-shot tubular magazine. The Carbine version has a 20.5" barrel and 12-shot magazine. The finish is blued, with a case-colored hammer and lever. The stock is walnut with an oil finish. The Colt Hartford address is on the barrel, and "Burgess Patents" is stamped on the bottom of the lever. There were 3,775 rifles manufactured—1,219 with round barrels and 2,556 with octagonal barrels. There were also 2,593 Carbines. The Burgess was produced from 1883-1885.

Lightning Slide-Action, Medium-Frame

This was the first slide-action rifle Colt produced. It is chambered for .32-20, .38-40, and .44-40 and was intended to be a companion piece to the SAAs in the same calibers. The rifle has a 26" barrel with 15-shot tube magazine; the carbine, a 20" barrel with 12-shot magazine. The finish is blued, with case-colored hammer; the walnut stock is oil-finished; and the forend, usually checkered. The Colt name and Hartford address are stamped on the barrel along with the patent dates. There were approximately 89,777 manufactured between 1884 and 1902.

Lightning Slide-Action Small-Frame

This is a well-made rifle and the first of its type that Colt manufactured. It is chambered for the .22 Short and Long. The standard barrel length is 24"; the finish, blued with a case-colored hammer. The stock is walnut; some were checkered; some, not. The barrel is stamped with the Colt name and Hartford address and the patent dates. There were 89,912 manufactured between 1887 and 1904.

Lightning Slide-Action, Large-Frame (Express)

This rifle is similar in appearance to the medium-frame Lightning, though larger in size. It is chambered in larger rifle calibers of the era, from .38-56 up to .50-95 Express. The larger calibers are more desirable from a collector's standpoint. The rifle has a 28" barrel; the carbine, a 22" barrel. The finish is blued, with a case-colored hammer. The stock is oiled walnut; the forend, checkered. The Colt name and Hartford address are stamped on the barrel along with the patent dates. This rifle is quite large and has come to be known as the "Express model." Colt manufactured 6,496 between 1887 and 1894.

Model 1878 Double-Barrel Shotgun

This model is chambered in 10 or 12 gauge and has 28", 30", or 32" barrels. It is a sidelock double-trigger hammer gun with case-colored locks and breech. The barrels are browned Damacus-patterned. The checkered walnut stock is varnished or oil-finished. The Colt's Hartford address is stamped on the barrel rib; and Colt's name, on the lock. This has been regarded as one of the finest shotguns made in America, although Colt had difficulty competing with the less expensive European imports of the day. They ceased production after only 22,690 were manufactured between 1878 and 1889.

Exc.	V.G.	Good	Fair	Poor
—	1500	900	500	300

NOTE: Fully engraved model add 300 percent.

Model 1883 Double-Barrel Shotgun

This model is a hammerless boxlock, chambered for 10 or 12 gauge. The barrels are 28", 30", or 32"; and it features double triggers. The frame and furniture are case-colored; the barrels, browned with Damascus pattern. The checkered walnut stock is varnished or oil-finished. Colt's Hartford address is stamped on the barrel rib. "Colt" is stamped on each side of the frame. Again, as in the Model 1878, this is rated as one of the finest of all American-made shotguns. There were many special orders, and they require individual appraisal. Colt manufactured 7,366 of these guns between 1883 and 1895.

NOTE: Fully engraved model add 300 percent.

Double-Barrel Rifle

This is one of the rarest of all Colt firearms and is a prize for the Colt collector. There were only 35 of these guns manufactured. They were said to be the special interest of Caldwell Hart Colt, Samuel Colt's son, who was an avid arms collector. It is said that most of the 35 guns produced wound up in his collection or those of his friends. This gun is chambered for .45-70 or one of the larger variations thereof. It is an exposed hammer sidelock with double triggers. The locks, breech, and furniture are case-colored; the barrels, browned or blued. The barrels are 28" in length, and the checkered stock was oil-finished or varnished walnut. The barrel rib is stamped with the Colt name and Hartford address. The locks are also stamped "Colt." One must exercise extreme caution in dealing with this model as there have been model 1878 Shotguns converted into double rifles. Colt manufactured the 35 guns over the period 1879-1885.

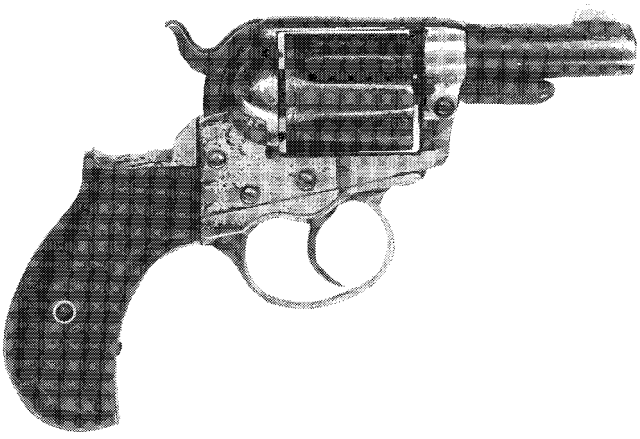
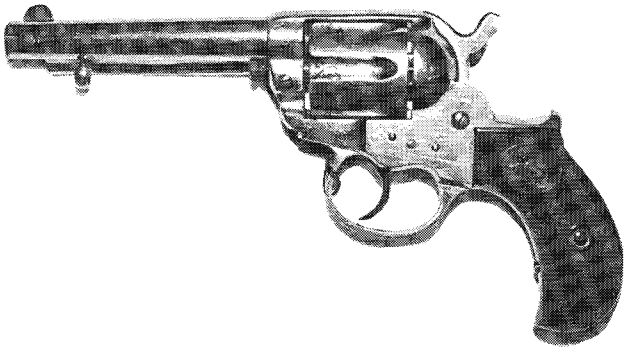
COLT DOUBLE-ACTION REVOLVERS

Model 1877 "Lightning" and "Thunderer"

The Model 1877 was Colt's first attempt at manufacturing a double-action revolver. It shows a striking resemblance to the Single-Action Army. Sales on this model were brisk, with over 166,000 produced between 1877 and 1909. Chambered for two different cartridges, the .38 Colt, known as the "Lightning," and .41 Colt, as the "Thunderer." The standard finishes are blued, with case-colored frame and nickel plate. The bird's-

head grips are of checkered rosewood on the early guns and hard rubber on the majority of the production run. The barrel lengths most often encountered are 2.5" and 3.5" without an ejector rod, and 4.5" and 6" with the rod. Other barrel lengths from 1.5" through 10" were offered. The Model 1877 holds 6 shots in either caliber. There were quite a few different variations found within this model designation. Values furnished are for the standard variations. Antiques made before 1898 would be more desirable from an investment standpoint. Note that these revolvers have a reputation as "watchmaker's nightmares" and non-functioning examples command substantially reduced prices.





Without Ejector, 2.5" and 3.5" Barrel

Exc.	V.G.	Good	Fair	Poor
3000	2000	800	500	350

With Ejector, 4.5" and 6" Barrel

Exc.	V.G.	Good	Fair	Poor
3000	1800	800	750	450

NOTE: Premium for blued guns add 25 percent. Premium for shorter than 2-1/2" add 50 percent. .41 Caliber "Thunderer" add 10 percent. Over 6" barrel add 50 percent. London barrel address add 20 percent. .32 caliber add 50 percent. Rosewood grips add 10 percent.

Model 1878 "Frontier"

This model is a large and somewhat ungainly looking revolver. It has a solid frame with a removable trigger guard. The cylinder does not swing out, and there is a thin loading gate. It has bird's-head grips made of checkered hard rubber; walnut would be found on the early models. The finish is either blued and case-colored or nickel-plated. The Model 1878 holds 6 shots, and the standard barrel lengths are 4.75", 5.5", and 7.5" with an ejector assembly and 3", 3.5", and 4" without. The standard chamberings for the Model 1878 are .32-20, .38-40, .41 Colt, .44-40, and .45 Colt. This model was fairly well received because it is chambered for the large calibers that were popular in that era. Colt manufactured 51,210 between 1878 and 1905. Antique models made before 1898 would be more desirable from an investment standpoint.

Model 1902 (Philippine or Alaskan Model)

This is a U.S. Ordnance contract Model 1878. It has a 6" barrel and is chambered for .45 Colt. The finish is blued, and there is a lanyard swivel on the butt. This model bears the U.S. inspector's marks. It is sometimes referred to as the Philippine or the Alaskan model. The trigger guard is quite a bit larger than standard.

Model 1889 Navy—Civilian Model

The 1889 Navy is an important model from a historical standpoint as it was the first double-action revolver Colt manufactured with a swing-out cylinder. They produced 31,000 of them between 1889 and 1894. The Model 1889 is chambered for the .38 Colt and the .41 Colt cartridges. The cylinder holds 6 shots. It is offered with a 3", 4.5", or 6" barrel; and the finish was either blued or nickel-plated. The grips are checkered hard rubber with the "Rampant Colt" in an oval molded into them. The patent dates 1884 and 1888 appear in the barrel marking, and the serial numbers are stamped on the butt.

Exc.	V.G.	Good	Fair	Poor
3000	1500	1000	600	300

NOTE: Add premium for blued models. For 3" barrel add 20 percent.

REMINDER

The prices listed in this book are given to assist the shooter and collector in pursuing their hobby with a better understanding of what is going on in the marketplace.

Model 1889 U.S. Navy—Martial Model

This variation has a 6" barrel, is chambered for .38 Colt, and is offered in blued finish only. "U.S.N." is stamped on the butt. Most of the Navy models were altered at the Colt factory to add the Model 1895 improvements. An original unaltered specimen would be worth as much as 50 percent premium over the altered values listed.

9000	5000	2500	1000	500

Model 1892 "New Army and Navy"—Civilian Model

This model is similar in appearance to the 1889 Navy. The main differences are improvements to the lockwork function. It has double bolt stop notches, a double cylinder locking bolt, and shorter flutes on the cylinder. The .38 Smith & Wesson and the .32-20 were added to the .38 Colt and .41 Colt chamberings. The checkered hard rubber grips are standard, with plain walnut grips found on some contract series guns. Barrel lengths and finishes are the same as described for the Model 1889. The patent dates 1895 and 1901 appear stamped on later models. Colt manufactured 291,000 of these revolvers between 1892 and 1907. Antiques before 1898 are more desirable from an investment standpoint.

Model 1905 Marine Corps

This model is a variation of the New Army and Navy Model. It was derived from the late production with its own serial range #10001-10926. With only 926 produced between 1905 and 1909, it is quite rare on today's market and is eagerly sought after by Colt Double-Action collectors. This model is chambered for the .38 Colt and the .38 Smith & Wesson Special cartridges. It holds 6 shots, has a 6" barrel, and is offered in a blued finish only. The grips are checkered walnut and are quite different than those found on previous models. "U.S.M.C." is stamped on the butt; patent dates of 1884, 1888, and 1895 are stamped on the barrel. One hundred twenty-five of these revolvers were earmarked for civilian sales and do not have the Marine Corps markings; these will generally be found in better condition. Values are similar.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

New Service Model

This model was in continual production from 1898 through 1944. It is chambered for 11 different calibers: .38 Special, .357 Magnum, .38-40, .44 Russian, .44 Special, .44-40, .45 ACP, .45 Colt, .450 Eley, .455 Eley, and .476 Eley. It is offered in barrel lengths from 2" to 7.5", either blued or nickel-plated. Checkered hard rubber grips were standard until 1928, and then checkered walnut grips were used with an inletted Colt medallion. This was the largest swing-out cylinder double-action revolver that Colt ever produced, and approximately 356,000 were manufactured over the 46 years they were made. There are many different variations of this revolver, and one should consult a book dealing strictly with Colt for a thorough breakdown and description.

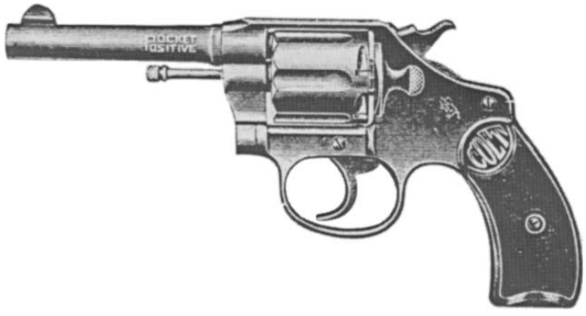
New Pocket Model
This was the first swing-out cylinder, double-action pocket revolver made by Colt. It is chambered for .32 Colt and .32 Smith & Wesson. It holds 6 shots and is offered with barrel lengths of 2.5", 3.5", 5", and 6". The finish is blued or nickel-plated, and the grips are checkered hard rubber with the oval Colt molded into them. "Colt's New Pocket" is stamped on the frame. 1884 and 1888 patent dates are stamped on the barrel of later-production guns. There were approximately 30,000 of these manufactured between 1893 and 1905. Antiques made before 1898 are more desirable.

Exc.	V.G.	Good	Fair	Poor
600	450	300	250	150

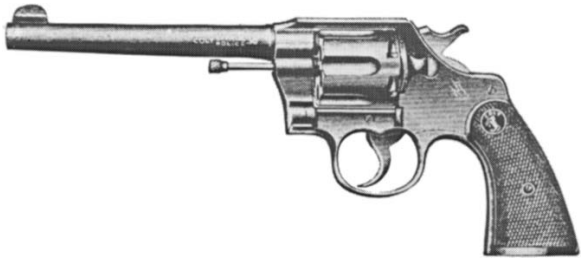
NOTE: Early production without patent dates add 25 percent. 5" barrel add 10 percent.

Pocket Positive
Externally this is the same revolver as the New Pocket, but it has the positive lock feature. It was manufactured between 1905 and 1940.



Exc.	V.G.	Good	Fair	Poor
600	375	275	225	125

Army Special Model
This is a heavier-framed improved version of the New Army and Navy revolver. It is chambered for the .32-20, .38 Colt, .38 Smith & Wesson, and .41 Colt. It is offered with a 4", 4.5", 5", and 6" barrel. The finish is blued or nickel-plated, and the grips are checkered hard rubber. The serial number range is #291000-#540000, and they were manufactured between 1908-1927.



Exc.	V.G.	Good	Fair	Poor

New Police Model
This model appears similar to the New Pocket Model. The frame is stamped "New Police." It is chambered for the .32 Colt, .32 Colt New Police, and .32 Smith & Wesson cartridges. The barrel lengths are 2.5", 4", and 6". The finishes are blued or nickel-plated. Colt manufactured 49,500 of this model from 1896-1907. The New York City Police Department purchased 4,500 of these revolvers, and the backstraps are so marked. There was also a target model of this revolver, which features a 6" barrel with a flattop frame and target sights, of which 5,000 were produced.

Exc.	V.G.	Good	Fair	Poor
500	350	225	150	100

NOTE: New York Police marked add 10 percent. Target model add 20 percent.

Police Positive
This is externally the same as the New Police with the addition of the positive lock feature and two new chamberings—the .38 New Police and the .38 Smith & Wesson. They were manufactured from 1905-1947.

Exc.	V.G.	Good	Fair	Poor
450	300	250	200	150

Police Positive Target
This is basically the same as the New Police Target with the positive lock feature. It is chambered in .22 LR, the .22 WRF, as well as the other cartridges offered in the earlier model.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

NOTE: A .22 caliber Police Positive chambered for the .22 Short and Long cartridge may be seen with British proofs. Several such revolvers were sold to London Armory in this configuration during the late 1920s. A NIB example recently sold for $1,200.

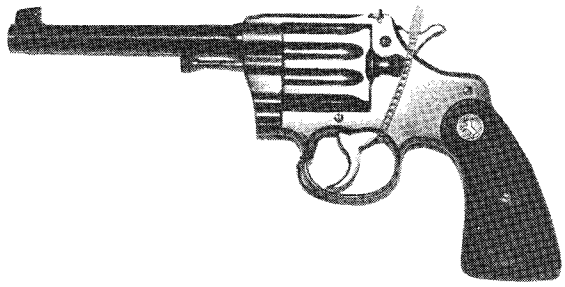
700	550	300	250	150

Camp Perry Single-Shot

This model was created by modifying an Officer's Model frame to accept a special flat single-shot "cylinder." This flat chamber pivots to the left side and downward for loading. The pistol is chambered for .22 LR and is offered with an 8" (early production) or 10" (late production) barrel. The finish is blued, with checkered walnut grips. The name "Camp Perry Model" is stamped on the left side of the chamber; the caliber is on the barrel. Colt named this model after the site of the U.S. Target Competition held annually at Camp Perry, Ohio. They manufactured 2,525 of these between 1920 and 1941.



Exc.	V.G.	Good	Fair	Poor
2500	1750	950	600	400

NOTE: Add 100 percent premium for 10" barrel. Add 50 percent premium for original box.

Officer's Model Match

Introduced in 1953 this model is similar to the Officer's Model Target and chambered for either the .22 caliber cartridge or the .38 Special with 6" barrel. The revolver is fitted with a heavy tapered barrel and wide hammer spur with adjustable rear sight and ramp front sight. It was sold with checkered walnut target grips. Blued finish is standard. Discontinued in 1970. The standard of long action could be fired both double- or single-action. The .22 caliber version prices are listed. Officer's Model Match in .38 caliber will bring approximately 20 percent less.

5000	3000	2000	1000	500

Agent L.W. 2nd Issue

This is a streamlined version with the shrouded ejector rod. In the last four years of its production, it was matte finished. Colt manufactured this model between 1973 and 1986.

Exc.	V.G.	Good	Fair	Poor
375	275	225	175	150

Aircrewman Special

This model was especially fabricated for the Air Force to be carried by their pilots for protection. It is extremely lightweight at 11 oz. The frame and the cylinder are made of aluminum alloy. It has a 2" barrel and is chambered for the .38 Special. The finish was blued, with checkered walnut grips. There were approximately 1,200 manufactured in 1951, and they are marked "U.S." or "A.F."

Exc.	V.G.	Good	Fair	Poor
4500	2500	1500	800	250

Courier

This is another version of the Cobra. It features a shorter grip frame and a 3" barrel. This model is chambered for .32 and .22 rimfire. There were approximately 3,000 manufactured in 1955 and 1956.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	600	500	350	150

NOTE: .22 Rimfire add 20 percent.

Trooper

This model was designed specifically by Colt to fill the need for a large, heavy-duty, powerful revolver that was accurate. The Trooper filled that need. It was offered with a 4" or 6" barrel and blued or nickel finishes with checkered walnut grips. The Trooper is chambered for the .38 Special/.357 Magnum, and there is a .22 rimfire version for the target shooters. This model was manufactured between 1953 and 1969. Add 10 percent for .357.

Exc.	V.G.	Good	Fair	Poor
500	325	250	150	100

Colt .357 Magnum

This is a deluxe version of the Trooper. It is offered with a special target wide hammer and large target-type grips. The sights are the same as Accro target model. It features a 4" or 6" barrel and a blued finish and was manufactured between 1953 and 1961. There were fewer than 15,000 produced.

Exc.	V.G.	Good	Fair	Poor
650	475	300	200	150

Diamondback

This model is a medium-frame, duty-type weapon suitable for target work. It has the short frame of the Detective Special with the ventilated rib 2.5", 4", or 6" barrel. It is chambered for .38 Special and .22 rimfire for the target shooters. The finish is blued or nickel-plated, with checkered walnut grips. The Diamondback features adjustable target sights, wide target hammer, and a steel frame. It was manufactured between 1966 and 1986.

850	625	375	300	250	150

NOTE: For .22 caliber 2.5" barrel add 30 percent. If finish is nickel add 60 percent.

Viper

This is an alloy-framed revolver chambered for the .38 Special. It has a 4" barrel and was manufactured between 1977 and 1984. The Viper is essentially a lightweight version of the Police Positive.

NIB	Exc.	V.G.	Good	Fair	Poor
550	425	325	200	125	100

Python

The Python is the Cadillac of the Colt double-action line. It has been manufactured since 1955 and is still the flagship of the Colt line. It is chambered for the .357 Magnum cartridge, holds 6 shots, and has been offered in barrel lengths of 2.5", 3", 4", 6", and 8". This revolver is offered finished in high polished Colt Royal Blue, nickel-plate, matte-finish stainless steel, or what is known as "The Ultimate"—a high polished stainless steel. The 3" barrel, as well as the nickel plating, has been discontinued. The grips are checkered walnut. It is possible that the nickel-plated specimens may bring a 10 percent premium. In my experience this is not always the case as many potential purchasers have a definite preference for the blued finish. Reintroduced into the Colt product line in 2001 as the Python Elite. Early (pre-1966) models command 10 percent to 25 percent premium in Exc. or better condition. Discontinued 2005.

Anaconda

This double-action .44 Magnum revolver was introduced in 1990. It is offered with 4", 6", or 8" barrel lengths. The 4" model weighs 47 oz., the 6" model weighs 63 oz., and the 8" model weighs 59 oz. The Anaconda holds 6 rounds and is available with a matte stainless steel finish. For 1993 a new chambering in .45 Colt was offered for the Anaconda. This model was offered with a 6" or 8" barrel in a matte stainless steel finish revolver chambered for the .44 Remington Magnum cartridge. It is currently offered with a 6" or 8" barrel and adjustable red-insert front and white-outline rear sights. It is constructed of matte-finished stainless steel and has black neoprene finger-groove grips with gold Colt medallions. In 1996 the Realtree model was offered with 8" barrel. Chambered for the .44 Magnum cartridge. Furnished with either adjustable rear sight and ramp front sights or special scope mount. No longer in production. Reintroduced in 2001 In .44 Magnum with 4", 6", or 8" barrel. Once again, discontinued.

NOTE: In 1998 the Anaconda was drilled and tapped for scope mounts and buyers had the option of barrel porting.

COLT SEMI-AUTOMATIC PISTOLS

The Colt Firearms Co. was the first of the American gun manufacturers to take the advent of the semi-automatic pistol seriously. This pistol design was becoming popular among European gun makers in the late 1880s and early 1900s. In the United States, however, the revolver was firmly ensconced as the accepted design. Colt realized that if the semi-auto could be made to function reliably, it would soon catch on. The powers that be at Colt were able to negotiate with some of the noted inventors of the day, including Browning, and to secure or lease the rights to manufacture their designs. Colt also encouraged the creativity of their employees with bonuses and incentives and, through this innovative thinking, soon became the leader in semi-auto pistol sales—a position that they have never really relinquished to any other American gun maker. The Colt semi-automatic pistols represent an interesting field for the collector of Colt handguns. There were many variations with high enough production to make it worthwhile to seek them out. There are a number of fine books on the Colt semi-automatics, and anyone wishing to do so will be able to learn a great deal about them. Collector interest is high in this field, and values are definitely on the rise.

Model 1900

This was the first of the Colt automatic pistols. It was actually a developmental model with only 3,500 being produced. The Model 1900 was not really a successful design. It was quite clumsy and out of balance in the hand; however it was reliable in function during Army trials. This model is chambered for the .38 Rimless smokeless cartridge. It has a detachable magazine that holds seven cartridges. The barrel is 6" in length. The finish is blued, with a case-colored hammer and safety/sight combination. The grips are either plain walnut, checkered walnut, or hard rubber. This pistol is a Browning design, and the left side of the slide is stamped "Browning's Patent" with the 1897 patent date. Colt sold 200 pistols to the Navy and 200 to the Army for field trials and evaluation. The remaining 3,300 were sold on the civilian market. This model was manufactured from 1900-1903.

NOTE: Many of the original 1900 pistols had the original sight/safety converted to Model 1902 configuration. These are worth about 50 percent less than unconverted pistols.

Model 1902 Sporting Pistol

This model is chambered for the .38 Rimless smokeless cartridge. It has a 7-round detachable magazine and a 6" barrel and is blued, with checkered hard rubber grips featuring the "Rampant Colt" molded into them. The most notable features of the 1902 Sporting Model are the rounded butt, rounded hammer spur, dovetailed rear sight, and the 1897-1902 patent dates. Colt manufactured approximately 7,500 of these pistols between 1903 and 1908.

Model 1903 Pocket Pistol

This was the first automatic pocket pistol Colt produced. It is essentially identical to the 1902 Sporting Model with a shorter slide. The barrel length is 4.5", and it is chambered for the .38 Rimless smokeless cartridge. It is blued, with a case-colored hammer, with checkered hard rubber grips that have the "Rampant Colt" molded into them. The detachable magazine holds 7 rounds. There were approximately 26,000 manufactured between 1903 and 1929.

Model 1903 Hammerless, .32 Pocket Pistol

Model 1903 Hammerless with 4" barrel

Courtesy Richard M. Kumor, Sr.

This was the second pocket automatic Colt manufactured. It was another of John Browning's designs, and it developed into one of Colt's most successful pistols. This pistol is chambered for the .32 ACP cartridge. Initially the barrel length was 4"; this was shortened to 3.75". The detachable magazine holds 8 rounds. The standard finish is blue, with quite a few nickel plated. The early model grips are checkered hard rubber with the "Rampant Colt" molded into them. Many of the nickel plated pistols had pearl grips. In 1924 the grips were changed to checkered walnut with the Colt medallions. The name of this model can be misleading as it is not a true hammerless but a concealed hammer design. It features a slide stop and a grip safety. Colt manufactured 572,215 civilian versions of this pistol and approximately 200,000 more for military contracts. This model was manufactured between 1903 and 1945.

Model 1908 Hammerless .25 Pocket Pistol

This was the smallest automatic Colt made. It is chambered for the .25 ACP cartridge, has a 2" barrel, and is 4.5" long overall. It weighs a mere 13 oz. This is a true pocket pistol. The detachable magazine holds 6 shots. This model was offered in blue or nickel-plate, with grips of checkered hard rubber and checkered walnut on later versions. This model has a grip safety, slide lock, and a magazine disconnector safety. This was another Browning design, and Fabrique Nationale manufactured this pistol in Belgium before Colt picked up the rights to make it in the U.S. This was a commercial success by Colt's standards, with approximately 409,000 manufactured between 1908 and 1941.

REMINDER

An "N/A" or "—" instead of a price indicates that there is no known price available for that gun in that condition, or the sales for that particular model are so few that a reliable price cannot be given.

Model 1905 .45 Automatic Pistol

The Spanish American War and the experiences with the Moros in the Philippine campaign taught a lesson about stopping power or the lack of it. The United States Army was convinced that they needed a more powerful handgun cartridge. This led Colt to the development of a .45 caliber cartridge suitable for the semi-automatic pistol. The Model 1905 and the .45 Rimless round were the result. In actuality, this cartridge was not nearly powerful enough to satisfy the need, but it led to the development of the .45 ACP. Colt believed that this pistol/cartridge combination would be a success and was geared up for mass production. The Army actually bought only 200 of them, and the total production was approximately 6,300 from 1905 to 1911. The pistol has a 5" barrel and detachable 7-shot magazine and is blued, with a case-colored hammer. The grips are checkered walnut. The hammer was rounded on the first 3,600 pistols and was changed to a spur hammer on the later models. The right side of the slide is stamped "Automatic Colt / Calibre 45 Rimless Smokeless." This model was not a commercial success for Colt—possibly because it has no safety whatsoever except for the floating inertia firing pin. The 200 military models have grip safeties only. A small number (believed to be less than 500) of these pistols were grooved to accept a shoulder stock. The stocks were made of leather and steel and made to double as a holster. These pistols have been classified "Curios and Relics" under the provisions of the Gun Control Act of 1968.

NOTE: Three-digit serial number add 20 percent. Two-digit serial number add 40 percent. For finish 99-100 percent add 30-50 percent.

Standard Colt "1911 Commercial Model" with Un-numbered Slide

Above about serial # C4500 with un-numbered slide to about serial #C127300. No fire blue. Polished finished but not mirror finish. Loop magazine until about C90000. A number of variations exist within this wide serial range such as slide nomenclature and position of the "Rampant Colt," but none currently receives any particular premium.

Exc.	V.G.	Good	Fair	Poor
3500	2100	1500	900	700

NOTE: Finish 99-100 percent add 20-50 percent.

Standard Colt "1911 Commercial Government Model" with Numbered Slide

Colt started to number the slide with the receiver's serial number at about serial #C127300. This practice continued for commercial production through WWII, and all 1911 commercial pistols after about serial C127300 to about serial C136000 (when 1911A1 production had taken over). The first numberd slide pistols (in the C127xxx range) had the slide numbered on the bottom of the slide rail. This only lasted a short time and the numbering was moved to behind the firing pin stop plate by serial C128000. Subtract 20 percent for a mismatched slide number. The changes between the 1911 Commercial Government Model and the 1911A1 Commercial Government were phased in during this period.

NOTE: Finish 99-100 percent add 20-50 percent.

FOREIGN CONTRACTS

Colt "1911 Commercial Government Model" Argentine Contracts

Multiple contracts were awarded by Argentina between 1914 and 1948 to supply .45 caliber pistols to their armed forces, police, and government agencies. these contracts totaled 21,616 pistols of which 2,151 were the 1911 model. Pistols differ from the Standard Government Model in that they are usually marked with an Argentine crest as well as the normal Colt commercial markings including the C prefix serial number. Colt also supplied Argentina the 1911A1 model "MODELO 1927" that had its own serial number range of #1 to #10000 with no C prefix. Most of these pistols are well used, reblued, had mixed parts, and have import markings. Prices listed are for completely original pistols. Reblue=Fair/Poor.

An example of one style of Argentine crest Courtesy Karl Karash

Colt "1911 Commercial Government Model" Canadian Contract

This group of 5099 pistols serial numbered between about C3077 and C13500 were purchased by the Canadian Government in 1914. Most observed pistols appear to be unmarked and can be identified only by a Colt factory letter. Others have been observed with the Canadian Broad Arrow property mark as well as unit markings. Often these unit markings are applied in a very rudimentary manner that detracts considerably from the appearance. (Any applied markings done crudely, deduct 10-50 percent.) Due to the nature of these markings, a Colt factory letter is probably a requirement to authenticate these pistols. Refinish=Fair/Poor.

NOTE: Finish. 99-100 percent add 20-50 percent.

Colt "1911 Commercial Government Model" British Contract

This series is chambered for the British .455 cartridge and is so marked on the right side of the slide. The British "Broad Arrow" proofmark will often be found. These pistols were made in 1915-1919 and follow the same numeric serial number sequence as the normal Government models, except that the "C" prefix was replaced with a "W." They are commercial series pistols. The magazine well of these .455 pistols is slightly larger than a standard Cal. .45 Auto pistol and will accept a Cal.45 magazine, but a standard Cal. 45 will not accept a Cal. .455 magazine. All pistols in the W19001 to W19200 range as well as some in the W29000 range are believed to be JJ marked above the left trigger guard bow. Add 25 percent for JJ marked. Some pistols in the C101000 to about C109000 range have RAF marks as well as a welded ring in the lanyard loop. Most RAF pistols have been refinished and many have been converted to .45 cal. by changing the barrels. Refinish=Fair/Poor.

MODEL 1911 AUTOMATIC PISTOL, MILITARY SERIES

NOTE: For a complete listing of Colt 1911 military pistols with photos, technical data, and prices see the *Standard Catalog of Military Firearms.*

COLT 1911A1 COMMERCIAL GOVERNMENT MODEL

The commercial "Government Models" made by Colt between the wars may be the best pistols that Colt ever produced. The civilian configurations of the 1911 and 1911A1 were known as "Government Models." They were identical to the military models, with the exception of the fit, finish, and markings. However, commercial production of the 1911A1 pistols was stopped when WWII started. Therefore, production changes of the 1911A1 pistols were not carried over to the contemporary commercial pistols because there was no contemporary commercial production. The "C" serial number prefix designated the commercial series until 1950, when it was changed to a "C" suffix. The "Government Model" pistols were polished and blued until about serial number C230,000, when the top, bottom, and rear were matte finished. The words "Government Model" as well as the usual "Verified Proof" mark were stamped on all but about the first 500 pistols when post-war production commenced at C220,000. Some of these first 500 also lacked the verified proof mark. These first post-war pistols used some leftover military parts such as triggers and stocks. Pre-war pistols all had checkered walnut grips. Post-war pistols generally had plastic grips until the "midrange" serial when the wood grips returned. There were a number of different commercial models manufactured. They are individually listed.

PRE-WWII COLT "1911A1 COMMERCIAL GOVERNMENT MODEL"

Manufactured by Colt from 1925-1942 from about serial number C136000 to about serial number C215000. Only a few pistols from serial #C202000 to C215000 were shipped domestically, as most were shipped to Brazil or renumbered into military models. *See Model 1911A1 commercial to military conversions.*

Standard Colt "1911A1 Commercial Government Model" Domestic Sales

These pistols have numbered slides, no foreign markings, no Swartz safeties and no additions whatsoever.

NOTE: Finish 99-100 percent add 30-60 percent.

Standard Colt "1911A1 Commercial Government Model" Export Sales

Usually with foreign crest or foreign inscription of a county such as Argentina or Brazil. This pistol has a numbered slide. Some variations with the foreign markings are more rare than the standard domestic pistols and have a developed local followings who have raised their prices considerably. The Argentine pistols do not have the collector interest that the others or the "Standard" domestic pistols have. Four factors have reduced collector interest in the Argentine Colt pistols compared to the rest:

1. Most of the Argentine-marked pistols have been recently imported and have the legally required important markings.
2. Many of the Argentine-marked pistols have been advertised and sold in the wholesale trade publications at utility prices.
3. Most of the recent import pistols from Argentina have been refinished or are in "well used" condition.
4. Most of the recent import pistols from Argentina have had some parts changed or swapped with other pistols and are not in original condition.

The few Argentine pistols that remain in original and excellent or better condition usually sell for less than their "plain Jane" counterparts, and they sell for much less than the rarer Brazilian and Mexican pistols.

Colt National Match Caliber .45, Pre-WWII, .45 (without Swartz safeties)

The National Match Commercial pistol was introduced by Colt at the 1930 National Matches at Camp Perry. Production began in 1932. The right side of the slide was marked "NATIONAL MATCH" and the mainspring housing had no lanyard loop. The National Match modifications to the standard pistol, as described in Colt literature included: "A tighter barrel, better sights, and a hand polished action." The "tighter barrel" probably amounted to a tighter fit between the barrel bushing and barrel. The hand polishing of the action probably produced a greatly improved trigger pull, but overall, the barrel slide lockup was probably only superficially improved. Colt also advertised a "Selected Match Grade" barrel. Colt advertising indicated that scores using the National Match pistols improved greatly and they probably did to a degree, but most of the improvement was probably due to the improved (wider) sights and improved trigger pull. The very first pistols had fixed sights, but by about SN C177,000 the "Stevens Adjustable Rear Target Sight" was available. Both fixed and adjustable sights were available thereafter throughout production. The total number of National Match pistols with each type of sight is not known, but one author (Kevin Williams, *Collecting Colt's National Match Pistols*) estimates that the percentage of adjustable sight equipped National Match pistols may have been only 20 percent. Note that the Colt National Match pistol is not referred to here as a "1911A1" because this pistol lacks the military lanyard loop that is present in all Standard Government Models. This is simply a matter of personal preference. Also note that "Colt National Match" Pre-war pistols are also "Government models" as the receiver was marked as such throughout production.

Swartz Safeties, Pre-WWII, Firing Pin and Hammer/Sear

The "Swartz Safeties" are a pair of devices that Colt installed in 1911A1 Commercial Government Models" and 1911A1 Commercial National Match pistols in the late 1930s and early 1940s. The first device, a firing pin block that was actuated by the grip safety, prevented the firing pin from moving forward unless the grip safety was squeezed. The second Swartz safety device, the Hammer/Sear safety prevented a possible unsafe half cock position. The Swartz firing pin block safety can be observed by pulling the slide back all the way and looking at the top of the frame. A Swartz-safety-equipped 1911A1 pistol will have a second pin protruding up, next to the conventional disconnector pin. This second pin pushes a spring loaded piston in the rear part of the slide that is visible when the slide is pulled back and the slide is viewed from underneath. This piston, in turn, blocks the firing pin when relaxed. A second Swartz safety (the Swartz Sear Safety), is usually built into pistols equipped with the Swartz firing pin block safety. The sear safety can sometimes be detected by the drag marks of the notched sear on the round portion of the hammer that the sear rides on. Pulling the hammer all the way back will expose these drag marks if they are visible. Presence of the drag marks, however, does not ensure that the Swartz-modified sear safety parts are all present. Disassembly may be required to verify the correct parts are all present. The Swartz Safeties are referred to in Colt Factory letters as the "NSD" (New Safety Device).

(From SN C162,000 to C215,000 about 3,000 total National Match pistols were made with and without Swartz safeties.) The number of National Match pistols having the Swartz safeties is unknown. However only a few pistols below serial C190000 had the safeties installed and of the pistols made after C190000, most were Standard Models shipped to Brazil and Argentina. The Brazilian pistols were without the safeties or the cutouts. The Argentine pistols were shipped in two batches of 250 pistols each. Both of these Argentine batches appear to have had the safeties installed as a number of them have recently been imported into the U.S.A. Probably much less than half of the total Colt made National Match pistols had the Swartz safeties. The total number of pistols (both Standard Government Model and National Match) shipped with Swartz safeties is probably much less than 3,000. And probably much less than half of the total Colt made National Match pistols had the Swartz safeties. Swartz safeties were also installed in late Super .38 and Super Match .38 pistols.

The Swartz pin is the smaller of the two pins, as seen from the top of the ejection port. The Swartz piston is located to the side of the disconnector notch in the slide. Courtesy Karl Karash

Standard 1911A1 Pre-WWII, "GOVERNMENT MODEL" Export Sales

With "Swartz Safeties" and usually a foreign crest or foreign inscription mainly from Argentina. The vast majority of Swartz equipped foreign contract pistols were shipped to Argentina, but Argentine pistols do not have the collector interest that the others or the plain domestic pistols have. Four factors reduce collector interest in the Colt made Argentine pistols compared to the rest:

1. Most of the Argentine-marked pistols have been recently imported and have the legally required Import Markings.
2. Many of the Argentine-marked pistols have been advertised and sold in the wholesale trade publications at utility prices.
3. Most of the recent import Argentine pistols have been refinished or are in "well used" condition.
4. Most of the recent import pistols from Argentina have had some parts changed or swapped with other pistols and are not in original condition.

The few of these Argentine Swartz equipped pistols that remain in original and excellent or better condition usually sell for less than their "plain Jane" domestic counterparts, and they sell for much less than the much rarer Brazilian and Mexican pistols. Perhaps these depressed prices represent a bargin for collectors with an eye to the future when the supply of these extremely rare pistols dries up. 100 percent reblue = Fair/Poor.

Exc.	V.G.	Good	Fair	Poor

NOTE: Finish 99-100 percent add 20-30 percent.

Argentine Contract Pistols "Modelo Argentino 1927, Calibre .45"

These pistols were delivered to Argentina in 1927. The right side of the slide is marked with the two-line inscription "Ejercito Argentino Colt Cal .45 Mod. 1927." There is also the Argentine National Seal and the "Rampant Colt." SN 1-10,000. Verified proof, Assembler's mark, and Final inspectors mark under left stock by upper bushing. None had Swartz Safeties. Most of these pistols were reblued. Reblued = Fair/Poor.

Exc.	V.G.	Good	Fair	Poor
1400	1050	850	600	400

NOTE: The abundance of these and other refinished Argentine pistols has depressed the prices of all original finish Argentine pistols. Finish 99-100 percent add 20-50 percent.

"Military to Commercial Conversions"

Some 1911 Military pistols that were brought home by GIs were subsequently returned to the Colt factory by their owners, for repair or refinishing. If the repair included a new barrel, the pistol would have been proof fired and a normal Verified proof mark affixed to the trigger guard bow in the normal commercial practice. If the pistol was refinished between about 1920 and 1942, the slide would probably be numbered to the frame again in the normal commercial practice. These pistols are really remanufactured Colt pistols of limited production and should be valued at least that of a contemporary 1911A1 commercial pistol. Only pistols marked with identifiable Colt markings should be included in this category. Very seldom seen.

"C" prefix until 1950, when it was changed to a suffix

Exc.	V.G.	Good	Fair	Poor
1900	1300	975	550	425

NOTE: Finish 99-100 percent add 30 percent.

Reworks of Colt 1911 and 1911A1 Commercial "GOVERNMENT MODEL" Pistols

Since Colt rework records are lost, reworked and refinished pistols without identifiable Colt applied markings are probably not verifiable as Colt reworks, and should be considered refinished pistols of unknown pedigree. The standard rule of thumb is that the value of a reworked/refinished pistol is equivalent to a similar original pistol in "Poor" condition. Many beginning collectors start by buying a pistol with either no original finish or it has been refinished. The first thing they ask is where can I get it refinished, and second is how much will it cost? A quality restoration will often cost $1,000, and that added to an initial cost of $600 will produce a pistol that might sell for $1,000 to $1,200. The lesson is that the cost to rework and refinish will seldom be recovered when the pistol is sold. Since these pistols are not original pistols, their prices are much closer to a utility shooter and depend a lot on the overall appearance of the pistol. A professionally restored example might sell for as high as $1,100 but a poorly refinished example would probably rank with the import-marked refinished pistols ($300).

POST WWII COMMERCIAL PRODUCED, DOMESTIC SALES, 1946-1969

Super .38 1929 Model, Pre-WWII

This pistol is identical in outward physical configuration to the .45 ACP Colt Commercial. It is chambered for the .38 Super cartridge and has a magazine that holds 9 rounds. The right side of the slide is marked "Colt Super .38 Automatic" in two lines, followed by the "Rampant Colt." The last few thousand pre-war Super .38 pistols made had the Swartz Safety parts installed, but some pistols were assembled post-war with leftover parts. These post-war-assembled pistols did not have the Swartz safeties installed but most (possibly all) had the cutouts. In 1945, 400 pistols were purchased by the U.S. Government. These 400 pistols bear the G.H.D. acceptance mark as well as the Ordnance crossed cannons. (G.H.D. and Ordnance marked add 30-50 percent. A factory letter is probably necessary here.) Some collectors feel that post-war assembly and post-war chemical tank blueing adds a premium, others feel that it requires a deduction. Post-war assembly may add 15 percent or it may deduct 15 percent.)

A Colt Super Match .38 pistol sold at auction for $12,650. This is a rare pre-war/post-war variation. Shipped in 1946. Condition is 99 percent.
Amoskeag Auction Company, April 2005

ACE and SERVICE MODEL ACE

Ace Model .22 Pistol

Starting on June 21, 1913, the U.S. Military along with "Springfield Armory" and "Colt Patented Firearms Manufacturing Co." attempted to develop a .22 cal rimfire pistol that could be used for training purposes. By 1927, the military became convinced that a pistol identical to the standard "Service Pistol" but in .22 cal rimfire was impractical and dropped the idea. In 1930 Colt purchased advertising that, in effect, requested the shooting public to let the company know if they would be interested in a .22 rimfire pistol built similar to the Government Model. The response must have been positive because in 1931 the Colt Ace appeared on the market. The Ace uses the same frame as the Government Model with a highly modified slide and a heavy barrel. It is chambered for .22 LR cartridge only. The size is the same as the larger-caliber version, and the weight is 36 oz. The operation is straight blowback. The Ace has a 10-round detachable magazine and features the "Improved Ace Adjustable Target Sight." The markings on the left side of the slide are the same as on the Government Model; the right side reads "Colt Ace 22 Long Rifle." At first the Army purchased a few pistols (totaling 206) through 1936. The Army concluded that the function of the Ace was less than perfect, as they concluded the .22 rimfire lacked the power to consistently and reliably operate the slide. Approximately 11,000 Ace pistols were manufactured, and in 1941 they were discontinued. Many owners today find that although the ACE is somewhat selective to ammunition, with full power loads, it is a highly reliable pistol when properly cleaned and maintained.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
2500	1750	1100	1000	900

NOTE: Finish 99-100 percent add 33 percent.

Pre-1945 Service Model Ace .22 R. F. Pistol

In 1937 Colt introduced this improved version of the Ace Pistol. It utilizes a floating chamber invented by David "Carbine" Williams, the firearm's designer who invented the "Short Stroke Gas Piston" that is the basis of the MI carbine while serving time on a Southern chain gang. Colt's advertised that this pistol with its floating chamber would give the Service Model Ace the reliability and "feel" of a .45 Auto. Today, owners of the Service Model ACE pistols find that they require regular maintenance and cleaning in order to keep the close-fitting floating chamber from binding. Furthermore, fouling appears to be much worse with some brands and types of ammunition. Most owners feel that although the perceived recoil of the Service Model ACE is noticeably greater than that of the ACE, it falls far short of a .45 Auto's recoil. The serial number is prefixed by the letters "SM." The external configuration is the same as the Ace, and the slide is marked "Colt Service Model Ace .22 Long Rifle." Most were sold to the Army and some on a commercial basis. There were a total of 13,803 manufactured before production ceased in 1945.

Blued pistols (before about SN SM 3840)

NOTE: Finish 99-100 percent add 20-30 percent.

Conversion Units .22-.45, .45-.22

In 1938 Colt released a .22-caliber conversion unit. With this kit, one who already owned a Government Model could simply switch the top half and fire inexpensive .22 rimfire ammunition. The unit consists of a slide marked "Service Model Ace," barrel with floating chamber, ejector, slide lock, bushing, recoil spring, 10-shot magazine, and box. The Conversion Units feature the Stevens adjustable rear sight. Later that same year, a kit to convert the Service Model Ace to .45 ACP was offered. In 1942 production of these units ceased. The .22 kit was reintroduced in 1947; the .45 kit was not brought back. (Finish 99-100 percent add 20-30 percent.) Subtract 20 percent if box is missing. Be alert, as sometimes a conversion unit is found on a Service Model ACE receiver and a Service model Ace upper is sold as a "Conversion Unit." Conversion Units are ALWAYS marked "Conversion Unit." Service Model ACE" pistols lack the "Conversion Unit" marking.

Pre-war and Post-war "U" numbered Service Model Ace Conversion Unit, .22-.45 (to convert .45 cal. to .22 cal.)

The pre-war conversion units were serial numbered U1-U2000.

MILITARY NATIONAL MATCH .45 PISTOLS

Rebuilt from service pistols at Springfield Armory between 1955 and about 1967 and at Rock Island in 1968. These pistols were built and rebuilt each year with a portion being sold to competitors by the NRA. Each year improvements were added to the rebuild program. Four articles in the "National Rifleman" document these pistols well: August 1959, April 1963, June 1966, and July 1966. Many parts for these pistols have been available and many "Look Alike" pistols have been built by basement armorers. Pistols generally came with a numbered box and shipping papers. Prices listed are for pistols with numbered box or papers. Less box and papers deduct 30 percent. When well-worn, these pistols will offer little over a standard pistol. Early pistols are much less commonly seen, but seem to be less sought after since they look largely like normal issue pistols.

COLT LICENSED AND UNLICENSED FOREIGN-MADE 1911A1 AND VARIATIONS

Argentine D.G.F.M.

Direccion General de Fabricaciones Militares made at the F.M.A.P. (Fabrica Militar de Arms Portatiles [Military Factory of Small Arms]). Licensed copies SN 24,000 to 112,494. Parts are generally interchangeable with Colt-made 1911A1 type pistols. Most pistols were marked "D.G.F.M. - (F.M.A.P.)." Late pistols were marked FM within a cartouche on the right side of the slide. These pistols are found both with and without import markings, often in excellent condition, currently more often in refinished condition, and with a seemingly endless variety of slide markings. None of these variations have yet achieved any particular collector status or distinction, unless new in box. A new in the box DGFM recently sold at auction for $1,200. In fact many of these fine pistols have and continue to be used as the platforms for the highly customized competition and target pistols that are currently popular. Refinished=Fair/Poor.

NOTE: Finish 99-100 percent-NIB add 10-30 percent)

Argentine-Made Ballester Molina

Un-licensed, Argentine redesigned versions. (Parts are NOT interchangeable with Colt except for the barrel and magazine.) These pistols are found both with and without import markings. Pistols without import markings usually have a B prefix number stamped on the left rear part of the mainspring housing and are often in excellent to new original condition. The vast majority of currently available pistols are found in excellent but refinished condition. Only the pistols with no import markings that are in excellent-to-new original condition have achieved any particular collector status. Most of these pistols that are being sold today are being carried and shot rather than being collected. Refinished = Fair/Poor.

Brazilian Models 1911A1

Made by "Fabrica de Itajuba" in Itajuba, Brazil, and the Imbel Model 973, made by "Industriade Material Belico do Brazil" in Sao Paulo, Brazil. The Itajuba is a true copy of the Colt 1911A1, and the Imbel is also believed to be a true copy. However, an Imbel has yet to be examined by the author. Too rarely seen in the U.S.A. to establish a meaningful price.

MODEL 1911A1 AUTOMATIC PISTOL MILITARY MODEL

NOTE: For Colt military Model 1911A1 pistols see a complete listing with photos, prices, technical data, and history in the *Standard Catalog of Military Firearms, 2nd Edition.*

COLT MODEL 1911A1 SEMI-AUTOMATIC PISTOL

The Model 1911A1 was manufactured by Colt until 1971 when the Series 70 Government Model superceded it. The modifications in the new model were a slightly heavier slide and a slotted collet barrel bushing. In 1983 Colt introduced the Series 80 models which had an additional passive firing pin safety lock. The half-cock notch was also redesigned. At the beginning of 1992 another change was made to the Model 1911A1 model in the form of an enhanced pistol. Included were the Government models, the Commander, the Officer's model, the Gold Cup, and the Combat Elite. These modifications are the result of Colt's desire to meet the shooters demand for a more "customized" pistol. Colt chose some of the most popular modifications to perform on their new enhanced models. They include beavertail safety grip, a slotted Commander-style hammer, a relief cut under the trigger guard, a beveled magazine well, a slightly longer trigger, a flat top rib, and angled slide serrations. The Model 1911A1 may be the most modified handgun in the world.

MKIV Series 70 Government Model

This model is essentially a newer version of the 1911A1. It has the prefix "70G" from 1970-1976, "G70" from 1976-1980, and "70B" from 1980-1983, when production ceased. This model is offered in blue or nickel plate and has checkered walnut grips with the Colt medallion. It is chambered for .45 ACP, .38 Super, 9mm, and 9mm Steyr (foreign export only).

MKIV Series 70 Gold Cup National Match

This is the newer version of the 1957 National Match. It features a slightly heavier slide and Colt Elliason sights. The chambering is .45 ACP only. The Accurizer barrel and bushing was introduced on this model. It was manufactured from 1970-1983.

COLT ENHANCED GOVERNMENT MODELS

In 1992 Colt introduced a new set of features for its Model 1911A1 series pistols. These new features include: a flattop slide, angled rear slide serrations, scalloped ejection port, combat style hammer, beavertail grip safety, relief cut-under trigger guard, and long trigger. The models that are affected by this new upgrade are the: Delta Elite, Combat Elite, Government Model, Combat Commander, Lightweight Commander, Officer's ACP, Officer's ACP Lightweight.

Commander

This is a shortened version of the Government model. It has a 4.25" barrel, a lightweight alloy frame, and a rounded spur hammer. The total weight of the Commander is 27.5 oz. The serial number has the suffix "LW." The Commander is chambered for the .45 ACP, 9mm, and .38 Super. The latter two

have been discontinued. Some were chambered for 7.65 Parabellum for export only. The Commander was introduced in 1949. No longer in production.

NIB	Exc.	V.G.	Good	Fair	Poor
700	550	450	350	300	200

Combat Commander

The Combat Commander was produced in response to complaints from some quarters about the excessive recoil and rapid wear of the alloy-framed Commander. This model is simply a Commander with a steel frame. The Combat Commander weighs 32 oz. and is offered in blue or satin nickel with walnut grips. No longer in production.

NIB	Exc.	V.G.	Good	Fair	Poor
700	550	475	375	300	200

MK IV Series 80 Government Model

This model was introduced in 1983. It is, for all purposes, the same externally as the Series 70. The basic difference is the addition of the new firing pin safety on this model. No longer in production.

NOTE: In 1997 Colt offered this model with fixed white dot sights.

REMINDER
In most cases, condition determines price.

Colt 1991A1

Introduced in 1992 this Colt Government Model is designed to resemble the original GI service issue Government Model. Offered in .45 ACP, a 5" barrel, 7-round magazine, black composition grips, and a special parkerized finish. In 1996 this model was also chambered for the 9x23 cartridge. No longer in production.

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	350	300	150	125

NOTE: This pistol was offered in stainless steel in 1996. Add $50 to the above prices.

M1991A1 Commander

Chambered for the .45 ACP this model has all of the same features as the standard M1991A1 with a slightly shorter 4.25" barrel. Reintroduced in 2004.

NIB	Exc.	V.G.	Good	Fair	Poor
700	550	400	300	225	125

NOTE: In 1997 Colt offered this model in stainless steel with fixed white dot sights. Add $100 to NIB price.

M1991A1 Compact

Chambered for the .45 ACP this model has a 3.25" barrel. It is 1.5" shorter than the standard M1991A1 model and .375" shorter in height. Its magazine holds 6 rounds. No longer in production.

REMINDER

Perhaps the best advice is for the collector to take his time. Do not be in a hurry, and do not allow yourself to be rushed into making a decision. Learn as much as possible about the firearm you are interested in collecting or shooting. Try to keep current with pricing.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

COLT .22 RIMFIRE SEMI-AUTOMATIC PISTOLS

For the Colt Ace see the Model 1911 section.

COLT WOODSMAN

Text and photos by Bob Rayburn

The original Colt .22 Target Model was designed by John Moses Browning and improved by engineers at Colt Firearms prior to the start of production in 1915, and major design updates were made in 1947 and again in 1955. Those three designs constitute what collectors call the three series of Woodsman pistols. First Series refers to all those built on the frame used prior to and during World War II. Second Series includes all versions built on the second frame design from 1947 until 1955, and Third Series means the third frame design as used from 1955 to the end of production in 1977.

Each series had a Target Model, a Sport Model, and a Match Target Model. All models are very similar: the Sport Model, for example, is merely the Target Model with a short barrel, and in some cases different sights or grips. The Match Target is nearly the same as the Sport or Target Model, but with a heavier, slab-sided barrel, a squared-off frame at the front of the receiver to mate with the heavy barrel, and improved sights. In the post-war years only there were also three very similar economy models: First the Challenger, then the Huntsman, and finally the Targetsman. The actions of the economy models are identical to the higher-end models of the same period internally; they lack only some of the refinements.

These guns were not assembled in strict numerical sequence. Furthermore, even when changes were made, old parts were used up at the same time new parts were being introduced. As a result, there is no hard and fast serial number dividing line for any particular feature, and serial number overlaps of several thousand are common.

All models of the Woodsman line, in all three series, are discussed here, but there are numerous variations in details that are primarily of interest to specialized collectors. For more details see Bob Rayburn's ***Colt Woodsman Pocket Guide***, a 96-page pocket-sized guide to the Colt Woodsman line, available for $10 (including shipping) from:

Bob Rayburn
PO Box 97104
Lakewood, WA 98497

Or online at http://www.colt22.com or http://www.coltwoodsman.com

Values listed here are for the pistol only, without extras, for guns in the middle of each condition range. These are guidelines to the prevailing retail values for the collector or shooter who is buying it as the end user, ***not*** what one might expect to receive from a gun dealer who is buying it to resell. Furthermore, within the Excellent and Very Good condition categories, there is a considerable spread in value, especially for the older and more collectible versions. Excellent, for example, means 98 percent ***or more*** original blue, but a very nice pre-Woodsman with 100 percent of the original blue would likely be worth twice as much to a serious collector as one with only 98 percent. At the other end of the condition scale, in the Fair and Poor categories, the individual values of component parts become significant, and effectively set a floor value. A poor condition, rusty, pitted pre-Woodsman or First Series Match Target would still have good value if it included the original magazine and grips in nice condition, for example. In addition, there are sometimes rare variations within the broad categories that can significantly enhance the value. Include the original crisp condition box, instructions, and tools, and the value goes up more, especially for high condition early guns. On the other hand, rust, pitting (even very minor), rebluing, or other non-factory modifications will significantly reduce the values from those listed in the Very Good category or better.

FIRST SERIES

In 1915 the intended market was the target shooter, and there was only one model: the Colt .22 LR Automatic Target Pistol. That model, however, proved to be very popular not only with target shooters, but also with hunters, trappers, campers, and other outdoorsmen. Management at Colt noticed this, of course, and decided to give the pistol a new name that more

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

closely reflected its widespread use. THE WOODSMAN was the name chosen, and that roll mark was added to the side of the receiver in 1927, at approximately serial number 54000.

To further satisfy the broader market, Colt introduced the Sport Model in 1933, and the Match Target Model in 1938. The compact and beautifully balanced Sport Model was a near perfect "kit gun" for the outdoorsman, and the Match Target was designed for the special needs of the serious target shooters.

Approximately 54,000 pre-Woodsmans (all with 6-5/8 inch barrels) and a combined total of approximately 110,000 Woodsman marked Sport and Target Models were produced in the first series. The Sport Model and Target Model were serial numbered together after the Sport Model was added to the line in 1933, so it is not possible to easily determine how many of each were manufactured. It is safe to say that the Target Model far outnumbered the Sport Model.

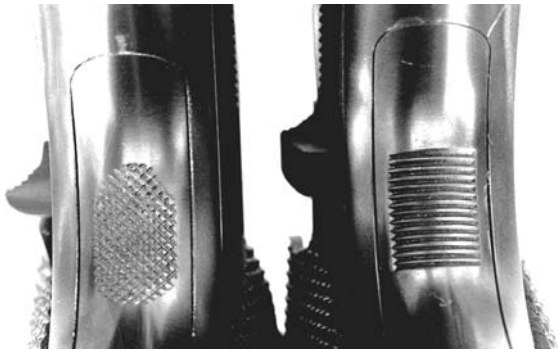
During the war years of 1942-45 the Match Target was the only Woodsman model built, and virtually the entire production was for the US military.

Pre-Woodsman

This model was made from 1915-1927. It has a 10-round magazine capacity, blue finish, checkered walnut grips, and 6-5/8" barrel. It was designed for .22 LR standard velocity ammunition. The rear sight is adjustable for windage, the front sight for elevation. Up until approximately serial number 31000 the barrel was a very thin, so-called "pencil barrel." The barrel weight and diameter were increased slightly in 1922 to what collectors now call the "medium weight barrel." There were also numerous small changes in the grips, magazines, and markings over the years. Approximately 54,000 were made in all variations.

An early pre-Woodsman

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1400	900	400	250	200



A checkered pattern in an oval on the mainspring housing (left) indicates a pre-Woodsman or First Series Woodsman Target model that was designed for standard velocity .22 Long Rifle ammunition only. A series of horizontal parallel lines in a rectangular pattern (right) indicates one that was designed for high-velocity .22 Long Rifle ammunition. All guns in the series made after 1932 were designed for high-velocity ammunition, and that includes ***all*** *Sport, Match Target, Challenger, Huntsman, and Targetsman models. The post-WWII guns have no pattern on the mainspring housing but they were all made for high-velocity ammunition.*

The three barrel profiles used with the Colt pre-Woodsman and First Series Target Model: from left to right, in order used, the pencil barrel, medium weight barrel, and straight taper barrel.

Woodsman Target

Initially this was exactly the same as the late pre-Woodsman, with the exception of THE WOODSMAN marking on the side of the receiver. Later there were small changes in the sights, trigger, and markings. In 1934 the barrel profile was again modified to a larger diameter, heavier barrel. This third and final pre-WWII barrel profile lacked the fillet, or step-down, as was present on the earlier pencil barrel and medium barrel, and is therefore commonly called the "straight taper" barrel.

A significant modification occurred in 1932 when a new heat-treated mainspring housing and stiffer recoil spring were phased in to allow the use of the increasingly popular *high velocity .22* LR ammunition. While this change has been widely reported to have taken place at serial number 83790, it was actually phased in over a period of time and a range of serial numbers, spanning at least 81000-86000, within which range both standard and high speed versions can be found. Fortunately Colt changed the marking on the back of the mainspring housing (see photo) to allow visual differentiation. Colt also sold a conversion kit to modify the older guns for use with high velocity ammunition. The kit consisted of a new style mainspring housing, a stiffer recoil spring, and a coil type magazine spring for use in the very early guns that had a Z type magazine spring.

1100	750	400	250	200

Woodsman Sport

With the Woodsman proving to be increasingly popular with outdoorsmen of all types, Colt decided to market a Woodsman better suited for a "take along" gun for hiking, camping, etc. This was accomplished in 1933 by merely shortening the barrel from 6-5/8 inches to 4-1/2 inches, and announcing the new Sport Model. Other than barrel length, the only difference between the Target Model and the Sport Model was an adjustable front sight on the Target Model and a fixed front sight on the Sport Model. Later a front sight adjustable for elevation would be an available option for the Sport Model. Colt called this arrangement "Target Sights," and indeed it was the same front sight used on the Target Model. A First Series Sport Model with an adjustable front sight will command a premium of approximately 25 percent over the values listed.

First Series Sport Model

Exc.	V.G.	Good	Fair	Poor
1400	1000	500	250	200

Woodsman Match Target

Colt introduced the Match Target Woodsman in 1938, with its own serial number series beginning at MT1, and continuing until 1944 with serial number MT16611. The new features included larger grips, a heavier barrel (6-5/8"), and a rear sight fully adjustable for both windage and elevation. To signify its intended market a Bullseye Target pattern was placed on the side of the barrel. That led to its nickname of "Bullseye Match Target." The elongated, one-piece wraparound walnut grips also picked up a nickname, due to their unusual shape. Unfortunately, the so-called "Elephant Ear" grips are somewhat fragile and are often broken. In addition, many of the serious target shooters of the day replaced them with custom grips with thumb rest and palm swell, and the original grips were set aside and eventually lost or discarded. For those reasons the original grips are often missing, and that severely affects the value. Values listed assume original one-piece walnut wraparound Elephant Ear grips with no cracks, repairs, or modifications, and a correct Match Target marked magazine. The values listed for Fair and Poor condition are primarily salvage value, and reflect the high value of original "Elephant Ear" grips and Match Target marked magazines for spare parts. Approximately 11,000 were produced for the civilian market from 1938-1942.

First Series Match Target

Exc.	V.G.	Good	Fair	Poor
3000	1600	750	650	550

Military Woodsman Match Target

After the United States entered World War II at the end of 1941, civilian production at Colt was stopped and the total effort was devoted to the U.S. military. Slightly more than 4000 First Series Match Target Woodsmans were delivered on U.S. Government contract from 1942-1944. Most of them, but not all, had serial numbers above MT12000. With possible rare exceptions they all had U.S. Property or U.S. military markings, standard blue finish, 6-5/8" barrel, and extended length plastic stocks. The plastic stocks are sometimes erroneously called elephant ear stocks. The military plastic stocks are still relatively easy to find and inexpensive and, since they will fit any First Series Colt Woodsman, they are often used as replacement grips on non-military guns. Since the military guns had plastic grips, rather than the costly and desirable "Elephant Ear" grips, the salvage value in the Fair and Poor condition range is less than that for the civilian model.

SECOND SERIES

After World War II Colt entered a lengthy period of clearing up government contracts and retooling for the civilian market. The Woodsman line was extensively revised and modernized. The second series guns began appearing near the end of 1947, although no appreciable numbers were shipped until 1948. The Second Series Woodsman had essentially the same action and many of the same internals as the first series guns, but were larger and heavier, with a longer grip frame. New features included a magazine safety, automatic slide stop when the magazine was emptied, fully adjustable rear sight, heavier barrels, and a 6-inch barrel length on the Target and Match Target Models, rather than 6-5/8 inches, as on the first series. Other new features included a push button magazine release just aft of the trigger guard, like that on the large frame Government

(Above left) The Second Series Woodsman came with two grip adapters, to provide for different sized hands.

(Above, bottom right) This shows the screw for mounting the grip adapter, and below that the concealed lanyard ring.

(Above, top right) In 1953 the Woodsman rear sight was changed from the Coltmaster (bottom) to the Accro (top).

Model semi-automatics, a lanyard ring concealed in the butt, and a provision for attaching a plastic grip adapter to the backstrap, thereby accommodating different sized hands. Elevation adjustment was incorporated into the rear sight of all Woodsman models, and the adjustable front sight was replaced with a fixed blade. Serial numbers were restarted at 1-S, and are intermixed for all three models. Approximately 146,000 of the three models were produced.

In 1950 Colt added the Challenger to the line of second series pistols, the first of the economy models. Internally the Challenger is nearly identical to the Woodsman pistols of the same era, but externally it lacks most of the refinements introduced with the Second Series Woodsman. It has no magazine safety, automatic slide stop, adjustable sights, push button magazine release, lanyard ring, or grip adapters. It was available with either a 6-inch or 4-1/2 inch barrel, and had its own serial number series beginning with 1-C. Approximately 77,000 were produced.

THIRD SERIES

In 1955 Colt again redesigned the Woodsman line. The most obvious change was in the location of the magazine release, which was again placed at the heel of the butt, just as on the first series guns. Other changes were made over time in the markings, grips, sights, and trigger. The Sport, Target, and Match Target models continued. The Challenger was replaced by the very similar Huntsman, with either a 4-1/2 inch or 6 inch barrel. In 1959 the Targetsman was added to the line. The Targetsman differs from the Huntsman only in having an adjustable rear sight and a thumbrest on the left grip panel, and was available with a 6-inch barrel only. All Third Series models had black plastic grips until 1960, and checkered walnut grips thereafter. The Huntsman has no thumbrest on the grips. All other Third Series models have a thumbrest on the left grip panel.

It is difficult to impossible to determine how many of each model were produced in the third series, due to a very complex serial numbering scheme. Approximately 1000 Third Series Sport, Target, and Match Target Models were numbered at the end of the second series serial number range, from 146138-S to 147138-S. Numbers were then restarted at 160001-S, so there are no post-WWII Woodsmans with numbers in the 148xxx-S to 159xxx-S range. The Challenger serial numbers, meantime, had reached approximately 77143-C prior to the Challenger being replaced by the Huntsman (note the C suffix, for Challenger). The Huntsman initially continued in the Challenger serial number series, although numbers skipped forward to 90000-C before restarting. The Targetsman, when added to the line early in 1959, joined the Huntsman in using the -C suffix serial numbers, which were by then up to 129300-C. Then in 1969, when Woodsman serial numbers had reached 241811-S and the -C numbers had reached 194040-C, Colt decided to integrate the serial numbers for all versions of the Woodsman, Huntsman, and Targetsman and restart numbering again. This time they started with 001001S. That worked fine until numbers reached 099999S, and rolled over to 100000S. Numbers used in 1951-52 were then being inadvertently duplicated, with one small exception: the earlier guns had a -S suffix while the later ones had only an S (no hyphen before the S). Apparently that was not enough of a distinction to satisfy federal regulations, so when Colt discovered the error after approximately 1,330 had already been numbered, the existing "double headers" were hand stamped with an S prefix, in addition to the S suffix, in order to salvage them. Serial numbers were then restarted yet again, this time at 300000S, and continued to 317736S, when production ended.

Colt Junior Pocket Model

This diminutive unit is only 4.5" long overall and weighs 12 oz. Colt did not manufacture this pistol, but rather had it made for them by Astra in Spain. The pistol was introduced in 1958 chambered for .25 ACP. One year later a .22 Short version appeared. Both had external hammers and detachable 6-round magazines. The passage of the 1968 Gun Control Act made import of a weapon of this size illegal, so Colt discontinued its relationship with Astra. The pistol was re-introduced in 1970 as an American-made product and was produced for two more years. Production ceased in 1972. Astra also made this pistol and called it the Cub.

Colt "57" Bolt-Action Rifle

This rifle was manufactured for Colt by the Jefferson Mfg. Co of New Haven, Connecticut. It utilizes a Fabrique Nationale Mauser action and has a checkered American walnut stock with a Monte Carlo comb. The rifle is offered with adjustable sights. It is chambered for .243 or .30-06. There is also a deluxe version that features higher-grade wood. There were approximately 5,000 manufactured in 1957.

Exc.	V.G.	Good	Fair	Poor

Coltsman Pump Shotgun

This model was manufactured by Jefferson Arms, utilizing an aluminum alloy frame made by Franchi. It is chambered for 12, 16, and 20 gauge and has a 26" or 28" plain barrel. There were approximately 2,000 manufactured between 1961 and 1965.

Exc.	V.G.	Good	Fair	Poor
350	300	275	200	150

Semi-Auto Shotgun

This shotgun was manufactured for Colt by the firm of Luigi Franchi in Italy. It features an aluminum alloy receiver and is chambered for 12 or 20 gauge. The barrel length is 26", 28", 30", or 32"—either vent-rib or plain. A deluxe version, "The Custom Auto," features a fancy walnut stock and a hand engraved receiver. There were approximately 5,300 manufactured between 1962 and 1966.

Exc.	V.G.	Good	Fair	Poor
375	325	300	225	175

NOTE: Custom Auto add 25 percent.

Double-Barrel Shotgun

During 1961 and 1962, Colt had approximately 50 side-by-side shotguns made for them by a French gun manufacturer. They have the Colt name on the breech area of the barrels and are in the 467000-469000 serial range. There is little information available on this gun, and Colt never went past the test-market stage.

600	475	—	—	—	—

Colt Sauer Bolt-Action Rifle

This is a high quality and unique rifle manufactured for Colt by the firm of J.P. Sauer & Son of Germany. The rifle features a non-rotating bolt that makes the Colt Sauer action smoother functioning than most. It has a 24" barrel, skipline-checkered walnut stock with rosewood forend tip, pistol grip cap, and recoil pad. There are five basic configurations: the Standard Action, chambered for .25-06, .270 Winchester, and .30-06; the Short Action, chambered for .22-250, .243 Winchester, and .308 Winchester; the Magnum Action, chambered for .7mm Remington Magnum, .300 Winchester Magnum, and .300 Weatherby Magnum; also the "Grand Alaskan" and the "Grand African," heavier versions chambered for .375 Holland & Holland Magnum and .458 Winchester Magnum, respectively. These rifles were all discontinued by Colt in 1985.

Colt Sauer Short Action

Exc.	V.G.	Good	Fair	Poor
1995	1850	1500	800	500

NOTE: Standard Action add $50. Magnum Action add 20 percent. "Grand Alaskan" add 50 percent. "Grand African" add 75 percent.

Colt Sauer Drilling

This is a rather unique firearm and one with which many American enthusiasts are not familiar—a 3-barreled gun. It features a side-by-side shotgun in 12 gauge over a .30-06 or .243 rifle barrel. The name was based on the German word for three, as this is where the concept was developed. They are quite popular in Europe where the game preserve style of hunting is prevalent but have little use in America where our hunting seasons don't often overlap. This drilling has 25" barrels and pop-up sights for the rifle barrel and is nicely engraved. It was discontinued by Colt in 1985.

COLT AR-15 AND COLT SPORTER TERMINOLOGY

There are three different and distinct manufacturing cycles that not only affect the value of these rifles but also the legal consequences of their modifications.

Pre-Ban Colt AR-15 rifles (Pre-1989): Fitted with bayonet lug, flash hider, and stamped AR-15 on lower receiver. Rifles that are NIB have a green label. It is legal to modify this rifle with any AR-15 upper receiver. These are the most desirable models because of their pre-ban features.

Colt Sporters (Post-1989-pre-September 1994): This transition model has no bayonet lug, but it does have a flash hider. There is no AR-15 designation stamped on the lower receiver. Rifles that are NIB have a blue label. It is legal to modify this rifle with upper receivers made after 1989, i.e. no bayonet lug. These rifles are less desirable than pre-ban AR-15s.

Colt Sporters (Post-September 1994): This rifle has no bayonet lug, no flash hider, and does not have the AR-15 designation stamped on the lower receiver. Rifles that are NIB have a blue label. It is legal to modify this rifle only with upper receivers manufactured after September 1994. These rifles are the least desirable of the three manufacturing periods because of their lack of pre-ban military features and current manufacture status.

AR-15 9mm Carbine (Model #6450)

Same as above, chambered for 9mm cartridge. Weighs 6.3 lbs.

Sporter Lightweight Rifle

This lightweight model has a 16" barrel and is finished in a matte black. It is available in either a .223 Rem. caliber (Model #6530) that weighs 6.7 lbs., a (Model #6430) 9mm caliber weighing 7.1 lbs., or a (Model #6830) 7.65x39mm that weighs 7.3 lbs. The .223 is furnished with two five-round box magazines as is the 9mm and 7.65x39mm. A cleaning kit and sling are also supplied with each new rifle. The buttstock and pistol grip are made of durable nylon and the handguard is reinforced fiberglass and aluminum lined. The rear sight is adjustable for windage and elevation. These newer models are referred to simply as Sporters and are not fitted with a bayonet lug and receiver block has different size pins.

COLT COMMEMORATIVES

The field of commemoratives can be fascinating and frustrating, depending on one's point of view. For someone who collects things from purely an aesthetic sense, commemoratives are quite desirable. Most are embellished and have had great care put into their fit and finish. They are attractively cased, and the proliferation of them makes acquisition relatively simple except from a financial standpoint. On the other hand, the collector who has an eye for the investment potential of his collections has found that the commemorative market has been soft and as investments they historically have not done well. The reason for this is twofold. The limited production appeal is not always what it seems. Many times the amounts produced are greater than one would consider limited. It is also a fact that if one fires a commemorative, its collectibility is gone. Even excessive handling can cause this problem. This means that since the majority of these firearms are kept new in the original boxes, the supply will usually outstrip the demand. Because of the limited numbers built, it is difficult to furnish accurate prices for the secondary market. Today's collectors are attracted to those Commemoratives with low production numbers and are willing to pay modest premiums for those where production was 2,500 or less.

Few commemoratives are ever lost or worn out. Collectors who seek firearms for their historic significance are usually not interested in the commemoratives, as even though they may have been issued to commemorate a specific historic person or event, they are not a part of the era and are regarded as "instant" collectibles. In some areas one will find that the Colt Commemoratives are not as desirable, saleable, or expensive as the plain out-of-the-box versions. This is especially true in the Single-Action Army Models. We list the commemoratives made by Colt in chronological order. Remember that the prices reflect new-in-the-box as it came from the factory—all papers, books, etc., intact and included. We also include the issue price for comparison. If the model with which you are concerned has been fired or is not in its original casing or box, deduct as much as 50 percent from these prices. It is interesting to note that in some areas shooters are taking advantage of the soft commemorative market and are buying SAAs at lower prices than the plain 3rd Generation guns—then shooting them. This can perhaps have a positive effect on appreciation.

One final note. There are a number of Colt Commemoratives that were produced by Colt but offered for sale by private companies to commemorate an event of their choosing. This publication does not cover most of these private commemoratives because it is difficult, if not impossible, to determine a secondary market value. It is also difficult to construct any meaningful comprehensive list of these private offerings. While the market for Colt factory remains soft the market for private commemoratives is usually very soft. the few that come on the market sometimes sell for less than half of their initial offering price. For those who enjoy collecting these firearms without investment goals these private commemoratives offer an additional outlet.

800	650	—	—	—	—

COLTON MANUFACTURING CO.

Toledo, Ohio

The Colton Manufacturing Co. provided Sears with its first American-made hammerless house brand double. Sears advertised their sidelock hammerless gun as "the equal of any gun made, regardless of price" in their 1900 Fall catalog No. 110. There were four models: three sideplated boxlock-types and a unique unitized coil spring driven striker assembly version. All these, especially the latter, were designed to be mass produced. Many of the distinctive sidelock-within-a-sideplated model were produced but they are seldom seen today either because they were used-up or did not hold up well and were scrapped. Sears replaced Colton with the more traditional design Fryberg gun in 1902. Values depend on grade. There appear to be a least two levels of quality and condition ranging from $300 to $1,500. Colton-marked guns are scarce.

Courtesy Nick Niles, Paul Goodwin photo

COLUMBIA ARMORY

Columbia, Tennessee

A trade name applied to a variety of solid frame cartridge revolvers made by John T. Smith Company of Rock Falls, Connecticut. They were marked "SAFETY HAMMERLESS REVOLVER." This model was made under several trade names.

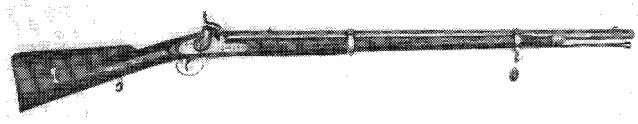
COOK & BROTHER RIFLES AND CARBINES
New Orleans

In early 1861, Ferdinand W.C. Cook and his brother, Francis L. Cook, both English emigres, joined to form Cook & Brother in New Orleans to manufacture rifles and carbines following the English P1853 series for the newly seceded state of Louisiana and its neighbors. Between June 1861 and the federal occupation of New Orleans in April 1862, this firm produced about 200 cavalry and artillery carbines and about 1000 rifles. Having successfully moved the armory's machinery before federal occupation, the firm continued manufacture of rifles in Selma, Alabama, during 1862, probably completing another 1,000 rifles with the New Orleans lock markings from the parts brought with them. Re-established in Athens, Georgia, in early 1863, the firm continued to build both carbines and rifles, manufacturing more than 5,500 above the New Orleans production through 1864. The firm's products were clearly among the best small arms made within the Confederacy.

Cook & Brother Rifles
(New Orleans & Selma production)

Overall length 48-3/4"; barrel length 33"; caliber .58. Markings: representation of a Confederate flag ("Stars & Bars") and "COOK & BROTHER/N.O./1861 (or) 1862" on lock; same usually on barrel, together with serial number and "PROVED" near breech. Rifles in the early production have long range rear sights and unusual two piece block and blade front sights as well as an integral bayonet lug with guide on right side of barrel. Later production utilizes a brass clamping ring for the bayonet, a block open rear sight and a simple block and blade front sight. Earlier production will claim a premium if in good condition.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	32000	13500	3000

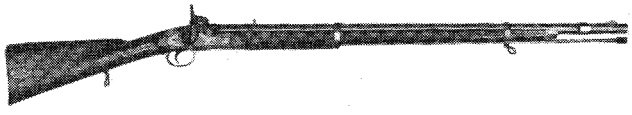
Cook & Brother Carbines (New Orleans production)

Overall length 40" (artillery), 37" (cavalry); barrel length 24" (artillery), 21" to 21-1/2" (cavalry); caliber .58. Markings: As on Cook & Brother rifles (New Orleans production) artillery and cavalry carbines were produced in New Orleans in a separate serial range from the rifles. Total production is thought not to have exceeded 225, divided evenly between 1861 and 1862 dates. In addition to the overall and barrel lengths, the main difference between the artillery and cavalry carbines is the manner in which they were carried. The former bears standard sling rings on the upper band and the trigger guard strap, the latter has a bar with a ring on the left side of the stock. Both are exceedingly rare.

Exc.	V.G.	Good	Fair	Poor
—	—	18500	7200	5000

Cook & Brother Rifles (Athens production)

Overall length 49"; barrel length 33"; caliber .58. Markings: representation of a Confederate flag ("Stars & Bars") and "COOK & BROTHER/ATHENS GA./date (1863 or 1864), and serial number on lock; "PROVED" on barrel near breech; serial number on various metal parts. After re-establishing their plant at Athens, Georgia, in the spring of 1863, Cook & Brother continued to manufacture rifles in a consecutive serial range after their New Orleans/Selma production (beginning about serial number 2000) and continued to make arms well into 1864 (through at least serial number 7650) until Sherman's army threatened the plant and necessitated the employment of its workforce in a military capacity as the 23rd Battalion Georgia State Guard.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	19000	8200	3000

Cook & Brother Carbines (Athens production)

Overall length 40" (artillery) or 37" (cavalry); barrel lengths 24" (artillery) or 21" to 21-1/2" (cavalry); caliber .58. Markings: same as on Athens production rifles. Artillery and cavalry carbines were manufactured in the same serial range as the Athens production rifles (about 2000 through 7650). As in New Orleans production, the artillery and cavalry carbines are distinguished from one another by their respective lengths. Unlike New Orleans/Selma production, however, some of the cavalry carbines are mounted with sling swivels of the artillery style, while others bear the sling ring on the left side and additionally have a swivel ring to secure the ramrod.

CPA RIFLES

Dingman's Ferry, Pennsylvania

This company builds rifles based on the Stevens Model 44-1/2. Several different configurations are offered, which are listed. Note there there are a number of special order options and custom features available at extra charge that will affect value.

Schuetzen Rifle

This model is usually built to order as to stock style, caliber, and barrel size, shape and length. Many calibers are available from .22 Short to .40-65 Winchester. Sights are extra.

NIB	Exc.	V.G.	Good	Fair	Poor
2450	—	—	—	—	—

Silhouette Rifle

This model as produced is approved for BPCR competition by the NRA. This model has either a sporting-style stock with low comb or the Model 52 style with more drop. Calibers are from .38-55 to .45-110 with other calibers available. Standard barrel is #4 part octagon 30" in length. Sights are extra.

NIB	Exc.	V.G.	Good	Fair	Poor
2100	—	—	—	—	—

Sporting Rifle

This model uses a sporting-style stock with standard forearm with Schnabel tip. Rifles are offered in rimmed calibers including .222, .225, .22 Hornet and others. Standard barrels are round or part octagon with weights from #1 to #5 and up to 28" in length. Sights are extra.

NIB	Exc.	V.G.	Good	Fair	Poor
2025	—	—	—	—	—

Varmint Rifle

As above but with a semi-beavertail forearm.

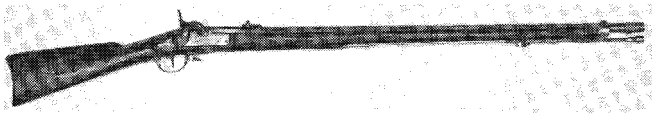
CRAUSE, CARL PHILLIP MUSKETS AND RIFLES

Herzberg, Germany

Carl Phillip Crause (who signed his products only with his last name) operated a gun manufactory in Herzberg on the Harz in the northwestern German kingdom of Hannover from the close of the Napoleonic Wars until 1857. The main production of his factory was devoted to military arms for Hannover and the surrounding principalities. Weapons of his manufacture included the Brunswick M1835 and M1848 rifles, the Hannovarian M1850 and M1854 rifle-muskets and yager rifles, and the M1840 and M1849 rifle-muskets of the Hanseatic League (a coalition of the north German states of Oldenberg, Hamburg, Bremen, and Lubeck). The latter two arms were subsequently altered to accept the elongated projectiles popular during the 1850s, and a few thousand evidently were imported into the United States and saw service during the American Civil War.

Hanseatic League M1840 Rifled Musket

Overall length 55-1/2"; barrel length 40-1/4"; caliber .70. Markings: on lockplate forward of hammer, "Crause in Herzberg" in script, the "s" in the archaic form, appearing as an "f." Of the 6,000 muskets of this type made, approximately half were sent to the United States in 1861 during the arms crisis that accompanied the outbreak of the American Civil War. A total of 2,680 of these were issued to Ohio and at least one regiment (the 56th Ohio) was armed with these rifled muskets. These arms were mistakenly identified during the period as being Saxon due to the similarity of the large squared off foresection of the lockplate.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	1700	800	375	200

Oldenberg M1849 Rifled Musket

Overall lengths 55-1/2" to 56-5/8" (long version), 49-1/2" (short version); barrel lengths 39" to 39-1/8" (long version), 33" (short version); caliber .69-.72 (rifled). Markings: "Crause in Herzberg" inscribed in script on the backstrap of the hammer housing, the "s" in archaic form, appearing as an "f." Nicknamed the "Cyclops" because its large, center-hung hammer is pierced with a large window that served as its rear sight, a few hundred of these clumsy rifled muskets may have been intermixed with the shipments of "Saxon" muskets imported in 1861 or 1862 into the United States during the American Civil War.

CRESCENT F. A. CO.

Norwich, Connecticut

Text and prices by Nick Niles

The company made good quality inexpensive single and double-barrel shotguns at its Norwich works, beginning about 1892. It was bought by H&D Folsom of New York City, large importers and distributors of firearms and sporting goods, so they could add an American-made sidelock hammer, side-by-side to their extensive range of imported guns. The Crescent guns were offered in 12, 16, 20, and 28 gauges and later, 44XL shot caliber with Damascus twist laminated or Armory steel barrels depending on the shooter's wants. In 1898 VL&D said these were the best American hammer guns in the market for the money.

Huge quantities of these "Hardware Guns" were produced in a profusion of private brands as well as in Folsom's house brand "American Gun Co. of NY." In 1922 the Crescent brand replaced the "American Gun Co. of NY" and can be found on many thousands of doubles. In 1905 Crescent's first hammerless sidelock was introduced as the American Gun Co. "Knickerbocker" Model No. 6. This very popular model became the Crescent "Peerless" No. 6 in 1922. In 1928 it became the Crescent "Empire" No. 60 and in 1931 the Crescent-Davis "New Empire" No. 88, "New Empire" No. 9, and "Empire" No. 9.

Crescent was bought by J. Stevens Arms Co., Division of Savage Arms Corp. about 1930. It was merged with Davis-Warner Arms Corp. successors to N.R. Davis & Sons Co. and became Crescent-Davis Arms Corp. In 1932 the operation was moved to the Stevens plant at Springfield, Mass. where some sidelock doubles were assembled, Crescent-Davis brand guns remained in Steven's full line catalog until 1941 but from 1937 to 1941 the doubles sold in the C-D brand were on either Stevens or Davis boxlock frames.

Crescent Certified Shotgun NFA, CURIO OR RELIC

The Crescent Certified Shotgun is a .410 smooth bore pistol with a 12.25" barrel manufactured from approximately 1930 to 1932 by the Crescent-Davis Arms Corp., Norwich, Connecticut, and possibly thereafter until 1934 by the J. Stevens Arms Co., which purchased the company. In various distributor catalogs it is termed the "Ever-Ready" Model 200, and advertised with a blued frame. Specimens have been observed with "tiger-stripe" (like an H&R Handy-Gun) or Colt SAA or Winchester-type case hardening. Total production is unknown but serial numbers ranging from 1305 to 3262 have been observed, suggesting it may have been fewer than 4,000. The Treasury Department ruled the .410 Crescent to be a "firearm" in the "any other weapon" category under the NFA in 1934, when its retail price was about $11.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
975	725	550	350	250

NOTE: Add $100 to $300 for original cardboard box.

The barrel is marked ***PROOF TESTED 410 GAUGE*** on top and **2-1/2 IN SHELLS** on the middle left side. The receiver's left side is stamped **CRESCENT CERTIFIED SHOTGUN/CRESCENT-DAVIS ARMS CORPORATION/NORWICH, CONN., U.S.A.** The earliest guns also have **.410** stamped at the top of the left side of the receiver near the breech, but this marking does not appear on later guns. It is a rather heavy (57 oz. unloaded) handgun.

Worthington Arms Co. made for George Worthington Co. of Cleveland, OH

CRISPIN, SILAS

New York, New York

Crispin Revolver

A .32 Crispin caliber 5- or 6-shot revolver produced in limited quantities. Some are marked "Smith Arms Co., New York City. Crispin's Pat. Oct. 3, 1865." The most noteworthy feature of these revolvers is that the cylinder is constructed in two pieces so that the belted Crispin cartridge can be used. It is believed that these revolvers were only made on an experimental basis, between 1865 and 1867.

CROSSFIRE

LaGrange, Georgia

This combination rifle/shotgun is manufactured by Saco Defense, Inc. for Crossfire. It is the first production firearm to combine the shotgun and rifle into a pump action, multi-shot weapon.

MK-1

This model is designed to fire both a .223 Rem. cartridge and a 12 gauge 3" shotgun shell from two different barrels. It is a dual action long gun operated with a pump action. Overall length of the gun is 38". The shotgun has a 4-round detachable magazine while the rifle has an AR-15 type 5-round magazine. Shotgun barrel is furnished with choke tubes. Offered in black oxide finish or camo finish. Weight is approximately 8.6 lbs. Introduced in 1999.

CUMMINGS, O. S.

Lowell, Massachusetts

Cummings Pocket Revolver

A .22 caliber spur trigger revolver with a 3.5" ribbed round barrel, and a 7-shot fluted cylinder. Nickel-plated with rosewood grip. The barrel is stamped "O.S. Cummings Lowell, Mass." Approximately 1,000 manufactured in the 1870s.

CZ

(Ceska Zbrojovka)
Uhersky Brod, Czech Republic

Established by Karel Bubla and Alois Tomiska in 1919. This company later merged with Hubertus Engineering Company. In 1949 the company was nationalized. CZ regularly exports 90 percent of its production to over 80 countries.

NOTE: As of 1998, CZ firearms have been imported exclusively by CZ-USA, a wholly-owned distribution subsidiary of Ceska Zbrojovka a.s. Uhersky Brod, (CZUB) of the Czech Republic.

Fox

A 6.35mm caliber semi-automatic pistol with a 2-1/8" barrel, tubular slide, a folding trigger and no trigger guard. Fox and CZ are inscribed on the slide. The CZ logo is on each grip plate. Blued with plastic grips. Manufactured between 1919 and 1936.

Courtesy James Rankin

900	750	600	400	200

Army Pistol 1922 (Nickl-Pistole)

Designed by Josef Nickl of Mauser. First approved by the Army in 1921, this pistol was chambered for the .380 ACP (9mmKurtz/9x17mm) cartridge. Plagued by design problems, it was produced only in 1922 and 1923. Fewer than 22,000 were built.

650	500	350	200	150

CZ 1921 Praga

A semi-automatic pistol in 7.65mm caliber. The first service pistol manufactured in Czechoslovakia. Production began in 1920. Praga is stamped on the slide and on each grip plate for commercial models. The service models were fitted with wood grips.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
650	550	475	350	200

CZ 1922

A semi-automatic pistol in caliber 6.35mm. Very similar to the Fox above. It has no sights but is fitted with a conventional trigger guard. CZ is stamped on the slide and the CZ logo on each grip plate. Grips are plastic or wood. Manufactured between 1922 and 1936.

Courtesy James Rankin

550	450	350	300	200

CZ 1924

The first large-production military pistol produced by CZ. Chambered for the 9mmK cartridge. It is the first of the CZ models with wraparound grips of both wood and plastic. CZ logo is seen on plastic grips. A lanyard loop is attached to the base of the butt. Manufactured from 1925 to 1932.

Courtesy James Rankin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
650	500	400	300	200

CZ 1927

A semi-automatic pistol chambered for the 7.65mm cartridge, marked the same as the CZ 1924, but the cocking grooves on the slide are cut vertically instead of sloped as on the earlier model. This model was blued with checkered, wrap-around, plastic grips. These early guns were beautifully made and marked, "Ceska Zbrojovka AS v Praze." After the war, these pistols continued in production until 1951. There were more than 500,000 manufactured.

NOTE: Some of these pistols were made with an extended barrel for the use of a silencer. This variation brings a large premium. Fewer than 10 CZ27s were made in .22 caliber. An expert opinion is suggested if a sale is contemplated.

350	300	250	175	125

CZ 1950

This is a blowback-operated, semi-automatic, double-action pistol chambered for the 7.65mm cartridge. It is patterned after the Walther Model PP with a few differences. The safety catch is located on the frame instead of the slide; and the trigger guard is not hinged, as on the Walther. It is dismantled by means of a catch on the side of the frame. Although intended to be a military pistol designed by the Kratochvil brothers, it proved to be underpowered and was adopted by the police. There were few released on the commercial market.

Courtesy James Rankin

795	—	—	—	—	—

PISTOLS

All currently imported CZ pistols can be ordered with tritium night sights with the exception of models CZ 97B and CZ 100. Add $80 for this option.

CZ 75

Designed by the Koucky brothers in 1975, this model bears little resemblance to previous CZ pistols. Considered by many, including the late Jeff Cooper, to be the best pistol ever to come from the Czech Republic and one of the finest semi-autos in the world. Chambered for the 9mm Parabellum cartridge it is copied in many countries. This pistol has a breechlock system utilizing a Browning-style cam. The slide rides on the inside of the slide rails. Magazine capacity is 15 rounds, barrel length is 4.72", overall length is 8", and the empty pistol weighs 34.5 oz. Offered in black paint, matte or polished blue finish.

NIB	Exc.	V.G.	Good	Fair	Poor
600	500	425	400	325	250

CZ 74 30th Anniversary

Introduced in 2005 this model features special 30th anniversary engraving, gold inlays, gold plated controls, high gloss blue finish, engraved blonde finished birch grips. Magazine capacity is 15 rounds. Limited to 1,000 pistols.

NIB	Exc.	V.G.	Good	Fair	Poor
760	600	—	—	—	—

CZ 75 B

Introduced in 1994 this CZ model is an updated version of the original CZ 75. It features a pinned front sight, a commander hammer, non-glare ribbed barrel, and a squared trigger guard. Also offered in .40 S&W chamber.

NIB	Exc.	V.G.	Good	Fair	Poor
510	400	300	250	175	125

NOTE: For .40 S&W add $30. For glossy blue add $20, for dual tone finish $25, and for nickel add $25. For tritium night sights add $80.

CZ 75 Compact

Introduced in 1992, this is a compact version of the CZ 75. The barrel length is 3.9", the overall length is 7.3", and the weight is about 32 oz. Offered in black paint, matte or polished blue finish. Traditional single-action double-action.

NIB	Exc.	V.G.	Good	Fair	Poor
540	425	300	250	175	125

NOTE: For .40 S&W add $30. For glossy blue add $20, for dual tone finish $25, and for nickel add $25. For tritium night sights add $80.

In 2005 this model was offered with accessory rail and ambidextrous manual safety. Add $50 to above prices.

CZ 75 Compact D

Essentially the same as the CZ 75 Compact but with a decocking double-action system and lightweight alloy frame. Weight approximately 25 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
555	450	—	—	—	—

NOTE: Only 20 of these pistols were imported into the U.S. No longer in production. Expert appraisal suggested prior to sale. Only the NIB retail price is listed above.

CZ 75 B Tactical

Chambered for the 9mm Luger cartridge and fitted with a 4.7" barrel. This pistol has a single-action/double-action trigger. Fixed sights. Rubber grips. Slide is black polycoat and the frame is a military green finish. Weight is about 35 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
575	400	325	—	—	—

CZ 75 BD

Has all the same features as the Model 75 B but with the addition of a decocking double-action. Black polycoat finish.

NIB	Exc.	V.G.	Good	Fair	Poor
520	400	300	—	—	—

CZ BD Compact

Introduced in 2001 this model features a 3.9" barrel with decocking lever. Chambered for the .40 S&W cartridge. Blued finish. Magazine capacity is 10 rounds. Weight is about 32 oz. All other features same as CZ 75 B Compact.

NIB	Exc.	V.G.	Good	Fair	Poor
450	350	300	—	—	—

CZ BD Compact Carry

Same as the model above but with rounded edges including trigger guard.

NIB	Exc.	V.G.	Good	Fair	Poor
450	350	300	—	—	—

CZ 75 B SA

This model was introduced in 2000 and features a single-action trigger designed for competitive shooting that can be carried in condition one. Fitted with a straight trigger, manual safety, and chambered for the 9mm cartridge. Weight is about 35 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
520	400	325	—	—	—

CZ 75 Semi-Compact

This model was introduced in 1994 and has the same barrel length as the Compact (3.9") but has the same full-size grip as the CZ 75. Magazine capacity is 15 rounds of 9mm. Overall length is 7.3".

NIB	Exc.	V.G.	Good	Fair	Poor
450	350	300	250	175	—

CZ 75 D PCR Compact

Introduced in 2000 this pistol is chambered for the 9mm cartridge and features a light alloy frame and 3.9" barrel. Trigger is both single and double-action with decocking lever. Low profile sights. Serrated front and rear backstrap. Designed for the Czech national police force. Magazine capacity is 10 rounds. Weight is about 27 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
525	425	350	—	—	—

CZ 75 Champion

This model is chambered for the .40 S&W, 9mm, and 9x21 cartridges. Single-action-only trigger with straight trigger. Fitted with a 4.5" barrel with low profile adjustable sights and three port compensator. Furnished with blue slide and nickel frame. Hand fitted. Weight is about 36 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
1475	1150	975	—	—	—

CZ 75 DAO

This model is similar to the CZ 75 but with a double-action-only trigger, no safety lever and a spurless hammer. Offered in 9mm and .40 S&W. Barrel length is 4.7". Weight is about 35 oz. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
450	350	300	—	—	—

CZ P-01

Introduced in 2002 this pistol replaced the CZ 75 with the Czech National Police. It features a forged aluminum alloy frame and 3.8" barrel. Decocker single-action/double-action. Fixed sights. Fitted with M3 accessory rail. Rubber grips. Ten-round magazine. Black polycoat finish. Weight is about 29 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
585	450	375	—	—	—

CZ 75 Standard IPSC (ST)

Designed and built for IPSC competition. Chambered for .40 S&W and fitted with a 5.4" barrel. Single-action-only trigger. Special high-profile sights. Weight is about 45 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
1150	850	775	—	—	—

CZ 75 M IPSC

Similar to the CZ 75 Standard IPSC with the addition of a two-port compensator with blast shield to protect frame-mounted optics. Slide racker standard. Red Dot optics. Barrel length is 3.9". Weight is about 45 oz. Introduced in 2001.

NIB	Exc.	V.G.	Good	Fair	Poor
1500	1200	1050	—	—	—

CZ 75 Silver Anniversary Model

This model commemorates the 25th anniversary of the CZ Model 75 pistol. It features a high polish nickel finish with walnut grips. The number "25" is inlaid in the grips. A total of 1000 pistols will be produced with about 500 allocated for the U.S. market.

NIB	Exc.	V.G.	Good	Fair	Poor
700	600	—	—	—	—

CZ 75 Stainless

All steel construction, double-stack magazines, 3-dot fixed sights and chambered for 9mm. 16+1 or 10+1 capacity with 4.72" barrel. The first stainless from CZ. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
575	495	—	—	—	—

CZ 75 SP-01 Shadow

Chambered 9mm for IPSC "Production" Division competition. 19+1 capacity, 4.72" barrel. 41 oz., wood grip. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
750	450	325	250	175	125

CZ 75 Tactical Sport

Single-action for IPSC competition. Chambered in 9mm and .40 S&W. Dual tone (nickel/blued). Capacity 20+1 (9mm) or 16+1 (.40 S&W). 5.4" barrel; 45 oz. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	900	—	—	—	—

CZ 85 B

This model is similar in appearance to the CZ 75 but offers some new features such as ambidextrous safety and slide stop levers, squared trigger guard, adjustable sight, and ribbed slide. Caliber, magazine capacity, and weight are same as CZ 75.

NIB	Exc.	V.G.	Good	Fair	Poor
535	425	300	250	175	125

NOTE: For .40 S&W add $30. For glossy blue add $20, for dual tone finish $25, and for nickel add $25.

CZ 85 Combat

Similar to the CZ 85 but with the addition of adjustable sights, walnut grips, round hammer, and free dropping magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
600	450	325	250	175	125

NOTE: For .40 S&W add $30. For glossy blue add $20, for dual tone finish $25, and for nickel add $25.

CZ 40B

Introduced in 2002 this model is similar to the CZ 75 but features an alloy frame similar in shape to the Colt Model 1911. It is a single-action/double-action design. Barrel length is 4.7". Magazine capacity is 10 rounds. Chambered for the .40 S&W cartridge. Weight is about 35 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
500	400	325	—	—	—

CZ Kadet

Chambered for the .22 LR cartridge and fitted with a 4.7" barrel. This model is a fixed barrel blowback semi-automatic pistol. Adjustable sights and blue finish. Weight is about 36 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
510	400	300	225	—	—

CZ 75 Kadet Conversion

This is a separate conversion kit for the CZ 75/85 series. It converts these pistols to .22 LR. Adjustable rear sight. Supplied with 10-round magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
300	225	200	—	—	—

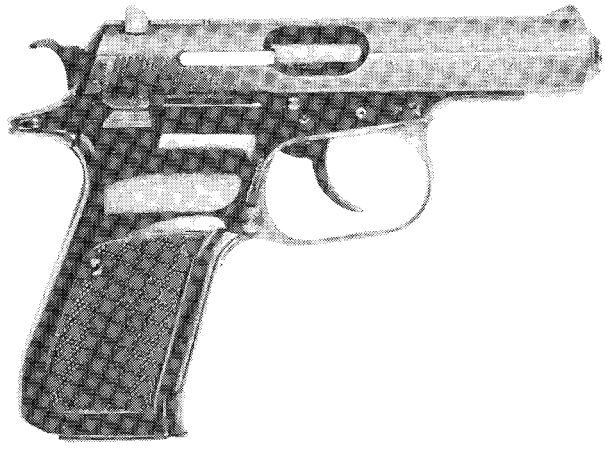
CZ 2075 RAMI

Introduced in 2004 this 9mm or .40 S&W pistol is fitted with a 3" barrel. It has a single-action/double-action trigger. The design is based on the CZ Model 75. Magazine capacity is 10 rounds for the 9mm and 8 rounds for the .40 S&W. Weight is about 25 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
575	425	—	—	—	—

CZ 83

This is a fixed-barrel .380 caliber pistol. It features an ambidextrous safety and magazine catch behind the trigger guard. The pistol is stripped by means of a hinged trigger guard. Barrel length is 3.8", overall length is 6.8", and weight is about 23 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
420	325	200	175	150	125

NOTE: For nickel finish add $5. In 1993 Special Editions of the above pistols were introduced. These Special Editions

consist of special finishes for the then-currently imported CZ pistols. They are high polish blue, nickel, chrome, gold, and a combination of the above finishes. These Special Edition finishes may affect price; they add between $100 and $250 to the cost of the pistol when new.

CZ Engraved Model 75 and Model 83 Pistols

CZ USA imports into this country factory engraved CZ 75 and CZ 83 pistols. These engraved pistols are special order and prices are quoted at the time of the order. It is strongly advised that a qualified appraisal be given before a sale.

1250	1000	800	600	350

DANCE & BROTHERS CONFEDERATE REVOLVERS

Columbia, Texas

J.H., G.P., and D.E. Dance began production of percussion revolvers for the Confederate States of America in Columbia, Texas, in mid-1862, moving to Anderson, Texas, in early 1864. Based on surviving serial numbers, the combined output at both places did not exceed 350 pistols. Most of these were in the "Army" (.44 caliber) size but a limited number of "Navy" (.36 caliber) were also manufactured. Nearly all are distinguished by the absence of a "recoil shield" on the frame behind the cylinders. As Colt M1851 "Navy" revolvers closely resemble the Dance Navy revolvers, great care must be exercised in examining revolvers purported to be Dance Navies.

DANDOY, C/A LIEGE

SEE—French Military Firearms

DANSK REKYLRIFFEL SYNDIKAT

Copenhagen, Denmark

This firm was founded in 1896. In 1936 it became known as Madsen, makers of the famous Madsen light machine gun.

The Schouboe pistols were designed by Jens Schouboe, the chief engineer for Dansk. They were developed in 1900-1902. The first year of manufacture was in 1902.

Schouboe Model 1902

A 7.65mm caliber semi-automatic pistol with a conventional blowback design. Production began in 1903 and ended in 1908, with fewer than 1,000 manufactured.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
14000	11000	8200	5000	3000

Schouboe Model 1904

A semi-automatic pistol in caliber 11.35mm. The Model 1904 was an enlarged Model 1902. The name Dansk Rekylriffel is stamped on the slide.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
24500	20500	16500	11000	5000

Schouboe Model 1907

An 11.35mm caliber semi-automatic pistol designed to fire a 55-grain, copper-aluminum-and-wood projectile at a velocity of 1625 fps. The pistol has the name Dansk Rekylriffel and Schouboe stamped on the slide. Some of these pistols had grip frames slotted for stocks. Five hundred were manufactured before production stopped in 1917.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
24000	20000	16000	10500	5000

NOTE: Combination holster/shoulder stocks were made for this model, but are extremely rare. If present with a pistol, they would add approximately $5,000 to the value.

Schouboe Model 1907 9mm

As above but chambered for the 9mm cartridge. Very few of these pistols were built.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
14000	11000	8250	5500	3000

Schouboe Model 1910/12

This model is chambered for the 11.35mm cartridge, and was involved in U.S. military tests in 1912.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
24500	21500	16500	11000	5000

Schouboe Model 1916

This model is also chambered for the 11.35mm cartridge. It is fitted with a very large slide release and safety lever on the left side of the pistol. The name of the manufacturer is stamped on the slide.

Courtesy James Rankin

DARDICK CORP.

Hamden, Connecticut

Perhaps one of the most unusual firearms to have been designed and marketed in the United States during the 20th cen-

tury. It utilizes a "tround," which is a triangular plastic case enclosing a cartridge. The action of these arms consists of a revolving carrier that brings the trounds from the magazine into line with the barrel. Discontinued in 1962. Values below are for boxed examples with supply of tround ammunition. Deduct 50 to 75 percent for unboxed, loose examples without ammunition.

Series 110

3" barrel. Chambered in .38 Dardick only.

Exc.	V.G.	Good	Fair	Poor
2500	1650	1500	1100	500

Series 1500

6" barrel. Chambered for the .22, .30, and the .38 Dardick.

Exc.	V.G.	Good	Fair	Poor
5000	3000	1750	1500	900

A carbine conversion kit consisting of a long barrel and shoulder stock was available and would bring a premium of $750 to $1400 depending on the condition.

DARLING, B. & B. M.

Belingham, Massachusetts

Darling Pepperbox Pistol

A .30 caliber percussion 6-shot pepperbox with 3.25" length barrels. Blued with walnut grips. This is one of the rarest American pepperboxes and copies are known to have been made. Consequently, prospective purchasers are advised to secure a qualified appraisal prior to acquisition. Manufactured during the late 1830s.

Exc.	V.G.	Good	Fair	Poor
—	—	4700	1650	600

DARNE, S. A.

St. Etienne, France

Darne Side-by-Side Shotguns

A 12, 16, 20, or 28 gauge sliding breech double-barrel shotgun manufactured in a variety of barrel lengths and with numerous optional features. Manufactured from 1881 to 1979.

NOTE: Darnes have been undergoing a surge in popularity in the last few years because of their unique design. Depending on the circumstances, and the amount of factory engraving and ornamentation present, individual examples may bring considerably in excess of the values listed below. Deduct 25 percent for 2.5-inch chambers.

DOUBLE-BARREL SHOTGUNS

Text and prices by Nick Niles

William Hastings Davenport's company also made and marked double-barrel, visible hammer guns in Providence, R.I. on Orange St., 1880-1882 and in Norwich, Conn. ca. 1890-1909. All are monbloc designs of which there were four models. The 1st model made at Providence, ca. 1881, had hammers rising out of the boxlock frame. The 2nd model, made in Norwich, Conn. about 1898, is a typical boxlock. The 3rd model made in Norwich, Conn., ca. 1909, has small sidelocks set in larger boxlock frames. Its barrels have unnotched extensions and notched underlugs. The 4th model, also from Norwich, possibly made after the 1901 takeover by Hopkins & Allen, also has sidelocks set in boxlock frames but the barrels have half moon lugs and notched barrel extensions. Few Davenport doubles are seen although single barrel guns are often found.

DAVIS, N.R. & CO.
DAVIS, N.R. & SONS

Manufacturer of percussion, and later, cartridge shotguns from 1853 to 1919. The cartridge shotguns embodied Nathan R. Davis' patented improvements of 1879, 1884, and 1886. Though only made in plain, serviceable grades, Davis shotguns were extremely well made and lived up to the company's motto "As Good as the Best."

DAVIS-WARNER ARMS CORPORATION

Norwich, Connecticut

Established in 1917, when N.R. Davis & Sons purchased the Warner Arms Company. Manufactured shotguns, as well as revolvers and semi-automatic pistols. Ceased operations in 1930. The Crescent Arms Company purchased the proprietary rights to the name and briefly assembled shotguns under the name (probably from parts acquired in the purchase) until Crescent was in turn purchased by J.C. Stevens.

Initially, the Davis-Warner shotguns were identical to those made by Davis, (page 360), but they subsequently made a Davis Grade B.S. Hammerless, Davis-Warner Expert and Davis Grade D.S. The pistols made by the company included .32 caliber revolvers and two Browning Patent semi-automatics made in Belgium for the company.

DEFIANCE ANTI-BANDIT GUN

Distributed by California Arms Co.
San Francisco, California

Defiance Anti-Bandit Gun CURIO OR RELIC, NFA

The Defiance Anti-Bandit Gun is a double-barreled smooth bore pistol designed for 2.5" 20 gauge shotgun or tear gas shells. It was manufactured in 1926-27 by The American Machine Company for the California Arms Co., San Francisco, California, a law enforcement supply manufacturer and distributor, and distributed by them from about 1926-30. Because few specimens exist establishing reliable values may be difficult, but could logically be expected to approximate those for a nonstandard or special-order Ithaca Auto & Burglar Gun (*q.v.*).

DEMIRETT, J.

Montpelier, Vermont

Under Hammer Pistol

A .27 caliber single-shot percussion pistol with 3" to 8" barrels and an under hammer. The barrel marked "J. Demerrit / Montpelier / Vermont." Blued with maple, walnut or stag horn grips. Active from 1866 to the mid-1880s.

DERINGER RIFLES AND PISTOLS, HENRY

Philadelphia, Pennsylvania

Henry Deringer Sr. and his son, Henry Jr., were well established in Philadelphia by the close of the War of 1812, having made both sporting and military rifles at that place since the turn of the century. Henry Jr. continued in the gun trade until the outbreak of the American Civil War, primarily producing flintlock and percussion military rifles, at least 2,500 "Northwest guns" and 1,200 rifles for the Indian trade, a few percussion martial pistols, but most importantly the percussion pocket pistols that became so popular that they took on his misspelled name as a generic term, the "derringers."

Deringer U.S. M1814 Military Rifle

Overall length 48-1/2"; barrel length 32-3/4"; caliber .54. Markings: on lockplate, "US/H. DERINGER/PHILADA," on top flat of barrel, "H. DERINGER/PHILADA" and standard U.S. proofmarks. The U.S. M1814 rifle is distinguished by its part octagonal barrel, whose bands were secured by wedge-shaped spring bands, and the distinctive finger ridges on the triggerguard strap. Henry Deringer Sr. received a contract for 2,000 of these rifles in 1814, but delivered only 50 that year, devoting his resources instead to a more lucrative Pennsylvania state contract for rifles.

Exc.	V.G.	Good	Fair	Poor
—	8500	2750	1300	850

Deringer U.S. M1817 Military Rifle (Types I & II)

Overall length 51-1/4"; barrel length 36"; caliber .54. Markings: on lockplate, "US/H. DERINGER/PHILADA" forward of cock, date on tail; standard U.S. proofmarks on barrel. The U.S. M1817 "common" rifle followed much of the same design elements as its predecessor, the U.S. M1814 rifle; however, the barrel is fully round with its bands secured by full band springs, and on the earlier production, the finger ridges on the triggerguard strap were eliminated in favor of a plain strap formed into a handgrip. On the 6,000 rifles manufactured under his 1840 contract, Deringer eliminated the "pistol grip" in favor of a plain strap, distinguishing Type 11 production from Type 1. As one of the four major contractors for the U.S. M1817 rifle, Deringer produced a total of 111,000 rifles for the U.S. War Department. Many of the rifles from first two contracts (2,000 in 1821, 3,000 in 1823) were distributed to Southern states under the 1808 Militia Act. Accordingly, Deringer M1817 rifles altered to percussion by traditional Southern methods may generate a premium.

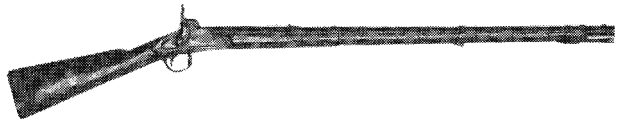
(altered to percussion)

Exc.	V.G.	Good	Fair	Poor
—	3500	1050	600	400

Deringer Original Percussion Martial Rifles (Types I & II)

Overall length 51-1/4"; barrel length 36"; caliber .54. Markings: Type I-on lockplate forward of hammer "DERINGER/PHILA"; also known to exist with standard U.S. M1817 lock markings and barrel marks; Type II-on lockplate forward of hammer "US/DERINGER/PHILADELA" or "DERINGER/PHILADELA" and same on top of barrel.

Although the Type I rifle of this series appears at first glance to be a late contract rifle altered to percussion by means of the cone-in barrel method, in fact it is an original percussion rifle made by Deringer from modified spare parts that remained after the completion of his 1840 contract. The Type 11 rifle also evidences having been made from modified parts; however, its cone is set in an elongated bolster brazed to the right side of the barrel. Speculation concerning these rifles is rampant; however, the available evidence indicates that Deringer produced about 600 of these most likely produced at the beginning of the American Civil War.



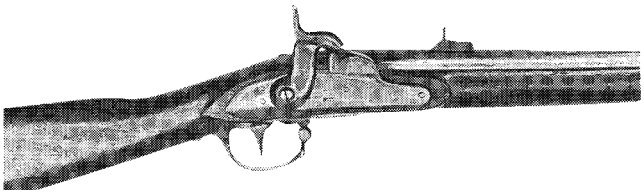
Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	4000	1250	725	450

Deringer Original Percussion Rifle-Muskets

Overall length 57-3/4"; barrel length 42"; caliber .69. Markings: on lock forward of hammer, "US/DERINGER/PHILADELA."

Just as the original percussion rifle appears to be an altered arm, the rare Deringer rifle muskets at first appear to have been flintlocks. However, these arms are original percussion, having been made from spare or rejected parts from the U.S. M1816 muskets. The brazed bolsters are identical in style to that of the Type 11 original percussion rifles made by Deringer. Barrels are rifled with seven grooves, and the barrels accordingly bear a rear sight. Deringer probably assembled a hundred of these rifles in 1861 to arm some company of Pennsylvania's early war regiments.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	3500	1000	725	450

Deringer U.S. Navy Contract "Boxlock" Pistols

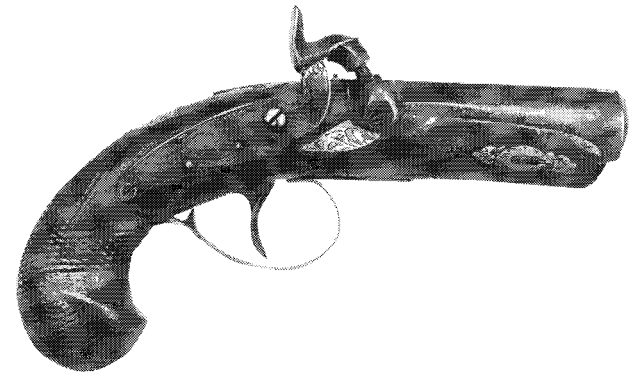
Overall length 11-5/8"; barrel length 6"; caliber .54. Markings: on lockplate, "US/DERINGER/ PHILADELIA" or merely "DERINGER/PHILADEL'A" in center, the tail either plain or marked "U.S.N./(date)"; barrels sometimes marked with U.S. Navy inspection marks.

Deringer was granted a contract with the U.S. Navy in 1845 for 1,200 of the new "boxlock" percussion pistols also made by Ames. All of these appear to have been delivered. From the extra parts, Deringer is thought to have assembled several hundred extra pistols, some of which he rifled. The latter bring a premium, even though quantities remain enigmatic.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	4050	1550	1225	750

Deringer Percussion Pocket Pistols

Overall length varies with barrel length; barrel length 1-1/2" to 6" in regular 1/8" gradiants; caliber .41 (usually, other calibers known). Markings: "DERINGER/PHILADELA" on back action lock and rear section of top barrel flat; "P" impressed in circle with serrated edges on left side of breech; agent marks occasionally on top of barrel.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

The most famous of Henry Deringer's products, an estimated 15,000 were produced between the Mexican War through the Civil War, usually in pairs. The popularity of the pistol is attested in the large number of imitations and the nickname "Derringer" applied to them, even when clearly not Deringer's products. Prices can fluctuate widely based on agent marks occasionally found on barrel. Care is advised in purchasing purported "true" derringers. Beware of fakes!

OVER-AND-UNDER

These custom made guns are all unique. Used guns in excellent condition will bring $30,000. Values increase depending on the small gauges and amount and coverage of engraving.

SIDE-BY-SIDE

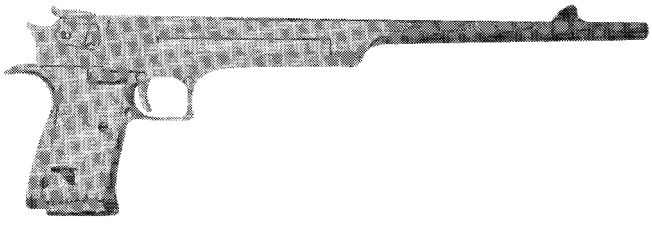
These custom made guns are all unique. Used guns in excellent condition will bring $20,000. Values increase depending on the small gauges and amount and coverage of engraving.

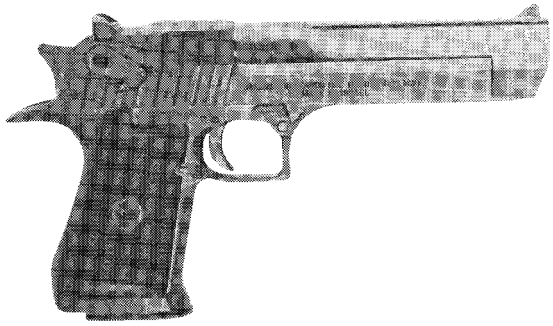
DESERT EAGLE/ISRAELI MILITARY INDUSTRIES

The Desert Eagle is a semi-automatic gas-operated pistol chambered for the .357 Magnum, .41 Magnum, .44 Magnum, and .50 Action Express. It is produced by Israel Military Industries. The pistols are furnished with a standard 6" barrel but 10" and 14" interchangeable barrels are offered as options. Also available are these interchangeable barrels that are Mag-Na-Ported. The standard material used for frame is steel, but stainless and aluminum are also available. The standard finish for these pistols is black oxide but custom finishes are available on special order. These special finishes are: gold, stainless steel, satin nickel, bright nickel, polished blue, camo, matte chrome, polished chrome, brushed chrome, and matte chrome with gold. All of these special order finishes as well as the optional barrels will affect the prices of the pistols. Prices listed here will reflect standard pistols only.

Desert Eagle .357 Magnum

Standard with 6" barrel and black oxide finish. Magazine capacity is 9 rounds. Standard weight is 58 oz.





NIB	Exc.	V.G.	Good	Fair	Poor
1250	900	700	500	400	250

Desert Eagle .41 Magnum/.44 Magnum

Standard barrel length is 6" with black oxide finish. Magazine capacity is 8 rounds. Weight for standard pistol is 63 oz. Add 10 percent for .41.

NIB	Exc.	V.G.	Good	Fair	Poor
1350	900	700	500	400	250

Desert Eagle .50 Action Express

Standard barrel length is 10" with black oxide finish. Magazine capacity is 7 rounds. Standard weight is 72 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
1450	900	700	500	400	250

Interchangeable barrels make the Desert Eagle a truly versatile handgun. The .50 AE shown here will handle the biggest game in North America.

Desert Eagle Mark XIX

Introduced in 1996 this new design is manufactured in the U.S. and allows the interchangeability of barrels to switch calibers between the same receiver. A single receiver can be turned into six different pistols in three Magnum calibers. Available are the .50 A.E., .44 Mag., and .357 Mag. in barrel lengths of 6" or 10". Separate magazines are also required. Eight different finishes are offered as well. A separate bolt assembly is necessary to convert the .44/.50 calibers to the .357. There are so many different possibilities with this design that only the basic pistol prices are given. Extra barrel assemblies are an additional cost. Prices range from $280 to $160 depending on caliber and length.

DEUTSCHE WERKE

Erfurt, Germany

Ortgies

A semi-automatic pistol in 6.35mm and 7.65mm. The 6.35mm pistol was manufactured in 1921 and the 7.65mm model in 1922 by the Ortgies Company. The pistols had the "HO" logo for Heinrich Ortgies on each grip. Later the Ortgies Company was bought by Deutsche Werke. The grip logo was "D." Over the period the Ortgies were manufactured with four different slide legends.

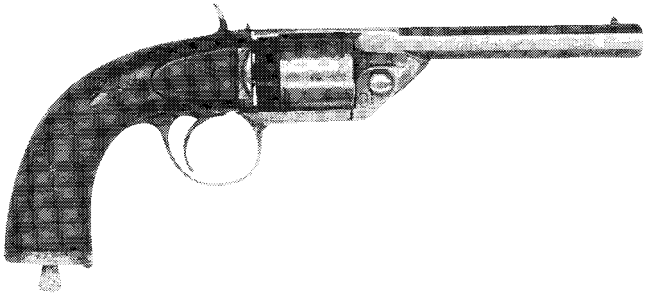
DEVISME, F. P.
Paris, France



One of the more popular French gunsmiths of the mid-19th century, F.P. Devisme manufactured a wide variety of firearms including single-shot percussion pistols, double-barrel percussion rifles and shotguns, percussion revolvers and cane guns. After 1858 this maker manufactured cartridge weapons of the same style as his percussion arms. The quality of all of his products is uniformly high and it is impossible to provide generalized price guide.

DREYSE

SEE—Rheinmetall

DRISCOLL, J.B.

Springfield, Massachusetts

Single-Shot Pocket Pistol

A small pistol chambered for .22 rimfire. It has a 3.5" octagonal barrel that pivots downward for loading after a trigger-like hook under the breech is pulled. It has a spur trigger, silver-plated brass frame, and a blued barrel. The square butt is flared at the bottom, and the grips are walnut. There were approximately 200 manufactured in the late 1860s.

DUBIEL ARMS CO.

Sherman, Texas

Established in 1975 by Joseph Dubiel and Dr. John Tyson. They are engaged in the manufacture of high-quality, custom built, bolt-action rifles. The rifles are constructed from patented Dubiel actions that feature a 5-lug bolt locking mechanism and a 36-degree bolt rotation. They are chambered for all calibers from .22-250 through .458 Winchester Magnum. Barrel lengths, weights, and stock styles are made to the customer's order. Douglas Premium barrels and Canjar triggers are used, and there are six basic stock designs available. The rifles are guaranteed to group in 1.5" at 100 yards with factory ammunition. The values listed are basic retail prices.

DUMOULIN

Herstal, Belgium

The guns produced by Ernest Dumoulin are essentially handmade to the customer's order. They are of the highest quality, both in materials and workmanship. There are many options available that have a tremendous impact on value fluctuations. The models and values listed here are base prices.

SHOTGUNS

Europa Model

A side-by-side double-barrel chambered for 12, 20, and 28 gauge and .410 bore. It is available in any length barrel and choke combination, with an Anson & Deeley boxlock action and automatic ejectors. One has the option of double- or single-selective triggers and a choice of six different moderate engraving patterns. The select walnut stock is oil-finished. This model was introduced in 1989. Basic values are listed.

NIB	Exc.	V.G.	Good	Fair	Poor
3500	2750	1950	1250	800	—

Leige Model

A side-by-side double chambered for 12, 16, 20, and 28 gauge. It is similar to the Europa, with a greater degree of finish and more engraving. The walnut is of a higher grade. This model was introduced in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
5750	4200	2750	1500	950	—

Continental Model

A side-by-side chambered for 12, 20, and 28 gauge and .410. Barrel lengths and chokes are on a custom-order basis. This is a true sidelock action with automatic ejectors and choice of triggers. There are six different engraving patterns, and the stock is made of high grade, hand-checkered, oil-finished walnut. This model was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
7500	6000	4500	3000	1500	—

Etendart Model

A side-by-side chambered for 12, 20, and 28 gauge. This best grade side-by-side is built on a purely made-to-order basis. It is profusely engraved and uses exhibition grade walnut in its stock. There are 12 different engraving patterns from which to choose, and the cost is according to embellishments chosen. Values given here are for the basic model.

NIB	Exc.	V.G.	Good	Fair	Poor
14500	11000	8500	4000	3000	—

Superposed Express International

An Over/Under chambered for 20 gauge and is furnished with a set of rifle barrels in the customer's choice of seven calibers. The walnut is of a deluxe grade, and engraving is available at extra cost. This is a made-to-order gun, and the value here is for the most basic model. This gun was discontinued in 1985.

Exc.	V.G.	Good	Fair	Poor
2500	2000	1250	750	—

Boss Royal Model

The best grade Over/Under, chambered for 12, 20, and 28 gauge. It is a full sidelock gun that is made to the customer's specification using the finest materials and workmanship available. This model was introduced in 1987.

NIB	Exc.	V.G.	Good	Fair	Poor
18500	15000	12000	8000	4500	—

Eagle Model Combination Gun

This model has a rifle barrel or the shotgun barrel that is chambered for 12 or 20 gauge. The rifle calibers available are .22 Hornet, .222 Remington, .222 Remington Magnum, 6mm, .243, .25-06, .30-06, 6.5 x 57R, 7 x 57R, 8 x 57JRS, and 9.3 x 74R. The action is a boxlock with automatic ejectors, and the other specifications are on a custom-order basis. This model was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
2750	2250	1500	950	750	—

DOUBLE RIFLES

Europa I

A made-to-order, Over/Under, double-barreled rifle available in the same calibers as the Eagle Combination gun. It has an Anson & Deeley boxlock and all other options to the customer's specifications.

NIB	Exc.	V.G.	Good	Fair	Poor
5000	4000	3000	2000	1000	—

Continental I Model

A more deluxe Over/Under rifle with a true sidelock-action. The calibers are the same as the Europa. The specifications are to the customer's order with 12 engraving patterns to choose from at extra cost. This model was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
8500	6750	5500	4000	2000	—

Pionier Express Rifle

A side-by-side double rifle chambered for the .22 Hornet through the .600 Nitro Express. It has the Anson & Deeley box-lock-action and is quite deluxe throughout. The specifications are to the customer's order, and there are basically 12 models available (P-1 through P-XII). The differences among these models are in the degree of ornamentation and quality of the walnut used for the stock. The prices of these models would have to be ascertained through appraisal, as a book of this nature could not possibly consider the variables that one could encounter with a gun of this type. Values range from approximately $8,000 to $12,000 for the basic models.

Aristocrat Model

A low-profile single-shot chambered for all calibers up to .375 Holland & Holland. This is a deluxe, made-to-order rifle with exhibition-grade walnut and 12 engraving patterns available.

Exc.	V.G.	Good	Fair	Poor
9000	7000	5500	3000	—

BOLT-ACTION RIFLES

Centurion Model

A custom-order rifle built on a Mauser or Sako action and chambered for all calibers from .270 to .458 Winchester Magnum. The barrel lengths available were 21.5", 24", and 25.5"; and there were many engraving options from which to choose. The stock is of deluxe French walnut, with rosewood forend tip and pistol gripcap. This rifle was discontinued in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
800	650	500	400	300	200

Centurion Classic

Similar to the Mauser-actioned Centurion chambered for the non-Magnum calibers only. The walnut used for the stock is a better grade.

NIB	Exc.	V.G.	Good	Fair	Poor
950	750	600	500	400	200

Diane

A more deluxe version of the Centurion Classic.

NIB	Exc.	V.G.	Good	Fair	Poor
1550	1250	900	650	500	300

Amazone

A 20" barreled, full-length stocked, upgraded version of the Diane.

NIB	Exc.	V.G.	Good	Fair	Poor
1750	1400	950	700	500	300

Bavaria Deluxe

Similar to the Centurion, with the same barrel lengths and calibers available. The engraving styles available are more deluxe. This model was discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
1900	1500	1000	800	500	300

Safari Model

Similar to the Bavaria Deluxe, but it is chambered for the heavy Magnum calibers only.

NIB	Exc.	V.G.	Good	Fair	Poor
2400	1900	1450	900	500	300

Safari Sportsman

Built on a Magnum Mauser action and is chambered for the .375 Holland & Holland, .404 Jeffreys, .416 Rigby, and the .505 Gibbs. This is a true big game rifle that was made available in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
4000	3250	2000	1250	900	—

African Pro

A more deluxe version of the Safari Sportsman, with a folding leaf rear sight, hooded front sight, and an ebony or buffalo horn forend tip.

NIB	Exc.	V.G.	Good	Fair	Poor
4800	3750	2500	1500	1000	—

NOTE: Again it is important to note that all values furnished in this section are estimates based on the most basic model in each designation. There are many options that will radically affect values.

DUSEK, F.

Opocno, Czech Republic

Dusek commenced business in the mid-1920s and continued to make firearms through WWII. They manufactured pistols for Nazi Germany under the contract code "aek." After the war the communists took over, and Dusek's designs were relegated to the CZ factory.

Perla

This 6.35mm pistol has a fixed barrel and open-topped slide. It resembles a Walther design and is striker-fired. The slide is marked "Automat Pistole Perla 6.35mm"; the grips, "Perla 6.35." Dusek made this model from the early 1930s until WWII.

Exc.	V.G.	Good	Fair	Poor
300	200	150	100	80

Duo

Introduced in 1926, this 6.35mm pistol is based on the 1906 Browning design. It has a 2.25" barrel and 6-shot detachable magazine. The Duo was successful from a commercial standpoint and was exported throughout the world. During WWII the slide markings were in German; and the name "Eblen," Dusek's German sales agent, may sometimes be found on the slide. The Duo may also be found marked Ideal, Jaga, and Singer.

1200	900	700	—	—	—

EAGLE ARMS CO.

New Haven, Connecticut
SEE—Plant's Manufacturing Co.

ECHAVE & ARIZMENDI

Eibar, Spain

Founded in 1911, this company produced the usual poor quality, early Spanish semi-automatic pistols. They did improve their quality later on and were permitted to return to gun manufacturing after the Spanish civil war. They were one of the few pistol makers to survive this period. They imported many models, and their products are not particularly of interest to collectors.

Basque, Echasa, Dickson, or Dickson Special Agent

These four pistols are the same semi-automatic pistols but chambered in .22 LR, 6.35mm, 7.65mm, and 9mmK respectively. Their magazine capacities are 10, 9, 7, and 6 rounds. They are manufactured with alloy frames and various finish combinations. The specific model names are stamped on the slides and grip plates.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Bronco Model 1913

A semi-automatic pistol in caliber 6.35mm. Patterned after the Browning Model 1906 with a squeeze grip safety. Bronco is stamped on the slide and on each side of the grip plate.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Bronco Model 1918

A semi-automatic pistol chambered for both 6.35mm or 7.65mm. Both are patterned after the Browning Model 1906 with a squeeze grip safety. The 7.65mm pistol is approximately 1/2" longer and higher than the 6.35mm. It has a magazine capacity of 7 rounds. The 6.35mm pistol has a magazine capacity of 6 rounds.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Echasa

Similar to the 6.35mm Bronco, without a grip safety. It is marked "Model 1916."

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Lightning

A renamed version of the Bronco in 6.35mm.

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Lur Panzer

A copy of the Luger toggle-lock-action, chambered for .22 rimfire. This is an almost exact copy except for a different trigger assembly and a less robust mainspring. It is marked "Lur Cal.22 LR Made in Spain." The plastic grips have "Panzer" molded into them.

Exc.	V.G.	Good	Fair	Poor
250	200	150	125	100

Pathfinder

A semi-automatic pistol similar to the Bronco above but in caliber 6.35mm and 7.65mm. Sold in the U.S. by Stoeger. The 7.65mm Pathfinder holds 12 rounds. The values listed are for both pistol models.

Exc.	V.G.	Good	Fair	Poor
275	175	125	90	50

Protector Model 1915 and 1918

A semi-automatic pistol in caliber 6.35mm. Similar to the Echasa model. "Protector" is stamped on the slide while the grip plates have various logos of the firms that marketed the pistol.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
250	175	100	70	40

Selecta Model 1918

A semi-automatic pistol chambered for 7.65mm cartridge. Patterned after the Protector but chambered for the 7.65mm. "Selecta" is stamped on the slide and Echave Arizmendi logo is on each of the grip plates.

Courtesy James Rankin

ECHEVERRIA, STAR-BONIFACIO SA

Eibar, Spain

An old-line Spanish company that survived the Spanish civil war. It was founded in 1908 by Jean Echeverria, but the early records of the company were lost during the civil war. The early pistols the company produced were patterned after the Mannlicher designs, and the trade name Star was the closest thing to Steyr that could be used. After the close of WWI, the company began production of the open-topped slide Star for which they have become known. They also produced a large 1911-type pistol that was successful. During the civil war, the plant was damaged and the company records destroyed; but after the cessation of hostilities, they were one of only three gun companies that were allowed to remain in business. They survive to this day and are known for the manufacture of quality firearms.

Star Model 1908

The first pistol produced under the Star banner. It is a Mannlicher copy that is chambered for 6.35mm. It has a 3" fixed barrel and an open-topped slide. The detachable magazine holds 8 shots. The finish is blued, and the grips are checkered plastic. The slide is marked "Automatic Pistol Star Patent."

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
300	250	200	150	100

Star Model 1914

Similar to the Model 1908, with a 5" barrel and larger grips that have the Star name molded into them. This model was the first to have the six-pointed star surrounded by rays of light (that became the Star trademark) stamped on its slide.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
300	250	200	150	100

Star Model 1919

Also a copy of a Mannlicher design and differs from its predecessors chiefly in the way the pistol is disassembled. This model has a spring catch at the top of the trigger guard. This model also has a small spur on the hammer, and the magazine release was relocated to a button behind the trigger guard instead of a catch at the bottom of the butt. This model was chambered for 6.35mm, 7.65mm and 9mm short, with various barrel lengths offered. The maker's name, as well as the Star trademark, is stamped into the slide. This model was produced until 1929.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
300	250	200	150	100

Star Model 1919 New Variation

Same as above but with full spur hammer.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
300	250	200	150	100

Modelo Militar

Represents the first pistol Star produced that was not a Mannlicher design copy. This model was copied from the Colt 1911. It was chambered initially for the 9mm Largo in hopes of securing a military contract. When this contract was awarded to Astra, Star chambered the Model 1919 for the .38 Super and the .45 ACP and put it on the commercial market. This model is like the Colt 1911—it has a Browning-type swinging link and the same type of lock up. However there is no grip safety, and the thumb safety functions differently. Add 30 percent for marked .38 Super.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
300	250	200	175	125

Star Model A

A modification of the Model 1919, chambered for the 7.65mm, 7.63mm Mauser, 9mm Largo, and the .45 ACP cartridge. The slide is similar in appearance to the 1911 Colt, and the spur hammer has a small hole in it. Early models had no grip safety, but later production added this feature. Some models are slotted for addition of a shoulder stock.

Courtesy James Rankin

Star Model 28

The first of Star's Super 9s. It is a double-action semi-automatic chambered for the 9mm Parabellum cartridge. It has a 4.25" barrel and a steel frame. The magazine holds 15 shots. The construction of this pistol was totally modular, and it has no screws in its design. It is blued with checkered synthetic grips and was manufactured in 1983 and 1984.

ECHEVERRIA

(Star)

Megastar

This is a double-action semi-automatic pistol chambered for the 10mm or .45 ACP cartridge. It features a three-position ambidextrous selective decocking lever, rubber grips, combat-style trigger guard, slotted hammer, and checkered mainspring housing. Barrel length is 4.6" and the magazine capacity is 12 rounds. Available in either blue or starvel (brushed chrome). The pistol weighs 47.6 oz.

Firestar-M/43, M/40, and M45

This is a compact large caliber semi-automatic pistol offered in 9mm, the M43, .40 S&W, the M40, and the .45 ACP, the M45. It features an ambidextrous safety, steel frame and slide, checkered rubber grips. The barrel is 3.4" on the M43 and M40 and 3.6" on the M45. Choice of finish is blue or starvel (brushed chrome). A finger rest magazine is optional. Weight for the M43 and M40 is 30 oz. while the M56 weighs 35 oz. Introduced in 1990.

ECLIPSE

Enterprise Gun Works
Pittsburgh, Pennsylvania

Single-Shot Derringer

This pocket pistol was made by the firm of James Bown & Son, doing business as the Enterprise Gun Works. It is chambered for .22 or .32-caliber rimfire cartridges. A few in .25 rimfire have been noted and would add approximately 25 percent to the values listed. The barrel is 2.5" in length and is part-round/part-octagonal. It pivots sideways for loading. It has a spur trigger and a bird's-head grip. The barrel is stamped "Eclipse." It is made of nickel-plated iron, with walnut grips. There were approximately 10,000 manufactured between 1870 and 1890.

84 GUN CO.

Eighty Four, Pennsylvania

In business for a brief time in the early 1970s, this company produced three basic bolt-action rifles—each in four grades that differ in amounts of embellishment and grades of wood. There is little known about this company and its products. An accurate appraisal with hands-on would be the only proper way to place a value on these rifles as there are not enough traded to establish correct values. The basic models are listed.

EL DORADO ARMS

SEE—United Sporting Arms, Inc.

ELGIN CUTLASS

Springfield, Massachusetts

Manufactured by two companies—C.B. Allen of Springfield, Massachusetts, and Morill, Mosman and Blair of Amherst, Massachusetts. It is a unique pistol that has an integral knife attachment affixed to the gun barrel. It was designed and patented by George Elgin and simultaneously produced by the two companies. The inspiration for this weapon was supposedly Jim Bowie, who at that time had made a name as a knife fighter with his large "Bowie" knife. The blades for these pistols were supplied by N.P. Ames of the famed Ames Sword Co. These pistols are much sought after, and one must exercise caution as fraudulent examples have been noted.

C. B. ALLEN-MADE PISTOLS

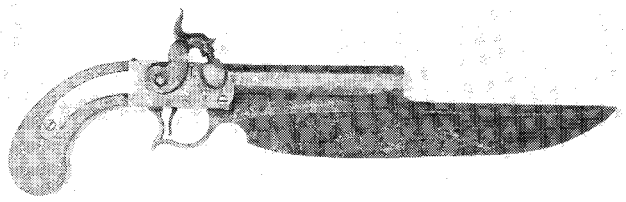
U.S. Navy Elgin Cutlass Pistol

Chambered for .54 caliber percussion and has a 5" octagonal smooth-bore barrel. The Bowie-style blade is 11" long by 2" wide and is forged together with the trigger guard and the knuckle guard that protects the grip. The handle is walnut. This pistol was issued to the U.S. Navy's Wilkes-South Sea Exploration Expedition, and the markings are "C.B. Allen / Springfield / Mass." "Elgin's Patent" and the letters "CB", "CBA" along with the date 1837. If the sheath that was issued with this knife pistol is included and in sound condition, it would add approximately $700 to the value. There were 150 manufactured for the U.S. Navy in 1838.

Exc.	V.G.	Good	Fair	Poor
—	11500	9250	7500	4750

Civilian Model

Chambered for .35 or .41 caliber percussion and has a 4" octagonal barrel with a 7.5"-10" knife blade. It has a round trigger guard but does not have the knuckle bow across the grip, as found on the military model. They are marked "C.B. Allen Springfield, Mass." Blades marked "N.P. Ames" have been noted. There were approximately 100 manufactured in 1837.



Exc.	V.G.	Good	Fair	Poor
—	10500	7000	4250	2750

MORILL, MOSMAN AND BLAIR-MADE PISTOLS

Small Model

The main difference in the pistols of the two makers is that this model has a round barrel and a square-back trigger guard that comes to a point at the rear. This version is chambered for .32 caliber percussion and has a 2.75" barrel. The knife blade is 7.5" in length and is screwed to the frame. This model is unmarked except for a serial number. The number produced is unknown, and they were manufactured in 1837.

Exc.	V.G.	Good	Fair	Poor
—	9900	6600	3750	2750

Large Model

Chambered for .36 caliber percussion and has a 4" round barrel and a 9" knife blade. The pistol is usually marked "Cast Steel" and serial numbered. The blade is etched with an American eagle, stars, and an urn with flowers. "Elgin Patent" is etched in the center. This model was also manufactured in 1837.

ELLS, JOSIAH

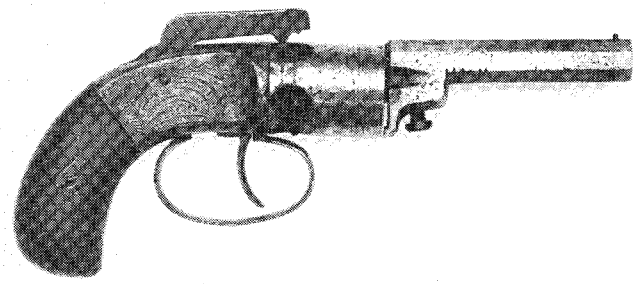
Pittsburgh, Pennsylvania

Pocket Revolver

Three distinct variations of this percussion revolver. They are chambered for .28 and .31 caliber and have 6-shot unfluted cylinders. They have been noted with 2.5", 3", and 3.75" octagonal barrels.

Model 1

The first model has an open-topped frame and is chambered for .28 caliber. The cylinder holds 5 or 6 shots, and the hammer is of the bar type. It was offered with a 2.5" or 3" barrel. The markings are "J. Ells; Patent; 1854." There were approximately 625 manufactured between 1857 and 1859.

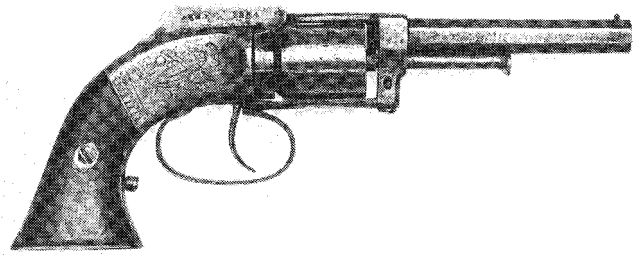


Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	1600	800	350	200

Model 2

The second model is similar to the first, with a solid-topped frame. They have 5-shot cylinders and 3.75" long barrels. There were approximately 550 manufactured.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	1650	725	350	200

Model 3

The third model is radically different from its forerunners. It has a closed-top frame and a conventional spur-type hammer that strikes from the right side. It functions either as a double- or single-action. It is chambered for .28 caliber and has a 5-shot cylinder and a 3.75" barrel. There were only about 200 manufactured between 1857 and 1859.

ENGLISH MILITARY FIREARMS

Enfield, England

Until the establishment of the Royal Armory at Enfield in 1816, the government of England relied solely upon the contract system to obtain small arms for its naval and military forces. Even after the Enfield Armory began is first major production in 1823, the contractors continued to dominate the production of arms for the military. These contractors were concentrated in two major cities, Birmingham and London. Although a number of makers from Birmingham were capable of manufacturing arms, "lock, stock, and barrel," and of assembling them, most of the makers of that city specialized in the making of specific parts, which could be assembled into complete arms on the "factory system" then prevalent in Liege. When the English War Department was the purchaser, the parts were usually delivered to the Tower of London for assembly. Most military arms made in Birmingham accordingly are seldom marked with a single maker's name. Rather they bear the English crown and the name "TOWER" on the lock. Those barrels that passed proof at Birmingham after 1813 were marked with the view and proofmarks derived from Ketland's only proofmarks; these consisted of a pair of crowned, crossed scepters, one pair of which had the letter "V" in the lower quarter and the other of which had the letters "B," "C," and "P" respectively in the left, right, and lower quarters. In contrast, the arms manufactured at London were almost always completed by their manufacturers, and bear their names usually upon the lockplates and barrels. The London gunmakers also marked their barrels with a pair of proofmarks, consisting of a crown over a "V" and a crown over an intertwined "G" and "P." Prominent martial arms makers in the London trade through the 1860s included, "BOND," "BARNETT," "BLISSETT," "GREENER," "HOLLIS & SONS," "LONDON ARMORY CO," "KERR," "PARKER, FIELD & SONS," "PRITCHETT," "POTTS & HUNT," "ROBERT WHEELER," "WILSON & CO.," and "YEOMANS." (It should be noted that most of these London makers also manufactured sporting and other trade arms,

which will bear similar marks.) During the period of transition from the contract system to the reliance upon the works at Enfield (roughly 1816 through 1867), the arms themselves underwent major transitions, first from flintlock to percussion ignition systems and then from smoothbore to rifled bore, first in large and then in small bore sizes. The major infantry types include:

New Land Pattern Musket

Overall length 58-1/2"; barrel length 42"; caliber .75. The mainstay of the British Army during the Napoleonic Wars, this flintlock arm continued, primarily, in service until 1838, with major quantities (5,000 from each) being ordered from Enfield and from the contractors as late as 1823.

Exc.	V.G.	Good	Fair	Poor
—	3500	1500	850	600

Pattern of 1839 (P1839) Musket

Overall length 55"; barrel length 39"; caliber .76. In 1838 the British War Department contracted for the parts for 30,000 new flintlock arms. However, before these arms could be assembled, the War Department adopted the percussion system of ignition and ordered that these arms be made as percussion. Obsolete by 1861, large numbers were purchased by the Southern Confederacy and imported for use in the American Civil War. Arms with firm evidence of Confederate military usage increases the value of the arm considerably.

Exc.	V.G.	Good	Fair	Poor
—	2000	500	450	350

Pattern of 1842 (P1842) Musket (and Rifled Musket)

Overall length 55"; barrel length 39-1/4"; caliber .75. The first English-made as percussion musket to be issued to the Line Regiments of the British Army, continued in production through the Crimean War. The final production (1851-1855) of 26,400 were made with rifled barrel and a long range rear sight soldered to the barrel, similar in configuration to that of the P1851 rifle-musket. These rifled versions of the P1842 musket will command a premium.

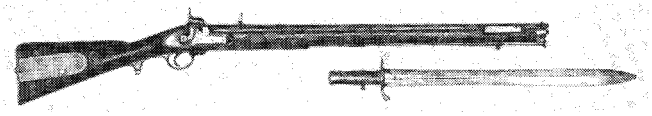
Exc.	V.G.	Good	Fair	Poor
—	2000	500	450	350

"Brunswick" Rifles (first model or P1837) and (second model or P1845)

Overall length 46-1/2" (P1837), 45-3/4" (P1845); barrel length 33" (P1837), 30" (P1845); caliber .704. The "Brunswick" rifle differed from its predecessors (the "Baker rifle") adopted for the English "Rifle Brigade" in having a large bore cut with only two spiraling grooves. These grooves engaged a specially cast ball having a raised belt circumventing it. The first model of the "Brunswick rifle" adopted in 1837 is primarily distinguished by having a "backaction" percussion lock, which continued in production until 1844 despite having been officially changed to the standard "barlock" in 1841. Those made after 1844 bear the standard percussion lock. The value of these rifles is enhanced by virtue of the importation of at least 2,000 (probably first model variants) into the Southern Confederacy during the American Civil War. (It should be noted that Russia also adopted a variant of the "Brunswick" style rifle, having them made in Liege, Belgium and so marked with Liege proofmarks. These rifles are distinguished by having a distinctive rear sight with an adjustable arcing ladder.)

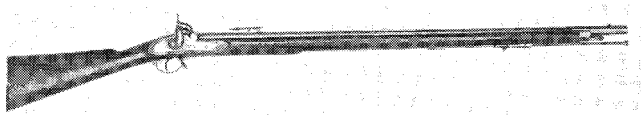


Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	3000	1250	700	450

Pattern of 1851 (P1851) Rifle Musket

Overall length 55"; barrel length 39"; caliber .702. With the success of the "Minie ball" projectile in France, England in 1851 adopted its first production rifle musket. Externally resembling the P1842 musket, the P1851 is distinguished by the long range rear sight soldered to the barrel and its smaller caliber (.70) rifled bore. Approximately 35,000 were manufactured until 1855, with a substantial number being imported to the United States during the early years of the American Civil War.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	3500	1500	700	450

Pattern of 1853 (P1853) Rifle Musket (first through fourth types)

Overall length 55" (54" on fourth type); barrel length 39"; caliber .577. The P1853 rifle musket underwent several changes during the span of its production. The earliest type (first model) was made with clamping bands. Due to problems with the bands slipping, the bands were modified in late 1855 to solid, spring fastened (second model), the upper wider than the other two. However, in 1858 the government reverted to clamping bands continuing production in this style through 1863. Those made at Enfield after 1859 were one inch shorter in the butt stock, but the contractors continued to deliver them in 55-inch length well into the 1860s. The fourth model is distinguished by the "Baddeley patent" clamping barrel bands, wherein the screwheads are recessed into the bands. The third model saw the greatest production, with more than 600,000 being imported into the north and about 300,000 into the south during the American Civil War. P1853 rifle muskets with early Confederate importation marks on the stock and butt plate will command a premium if authentic.

American-Made Copies of the English P1853 Rifle Musket

Three firms during the period from 1855 through 1862 produced copies of the P1853 rifle musket, Robbins & Lawrence of Windsor, Vermont; Orison Blunt of New York City; and John Moore of New York City. All three types command a premium over the standard imported muskets and may be distinguished as follows:

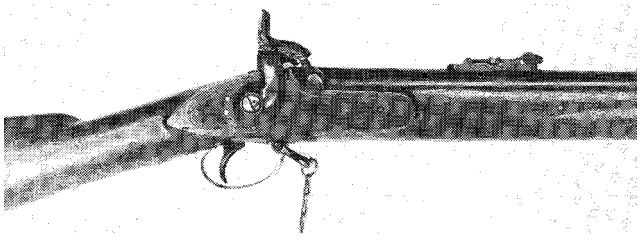
Robbins & Lawrence P1853 Rifle Muskets

During the Crimean War, Robbins & Lawrence received a contract for 25,000 P1853 rifle muskets of the second model. Due to production delays, the company had delivered only 10,400 when the war ended. Due to the penalties for non-deliveries, Robbins & Lawrence declared bankruptcy. An additional 5,600 arms were made on the firms machinery while in receivership by the "Vermont Arms Co." before the machinery was sold to Sharps and Eli Whitney, Jr. The Robbins & Lawrence-made P1853 rifle muskets are distinguished by the lock marking "WINDSOR" beneath the date (such as "1856") on the forward part of the lock and by non-English proofmarks on the barrel. Many of these arms saw service in the American Civil War, with Alabama obtaining several hundred in 1861. Arms with confirmed southern usage will bring substantial premiums.

Exc.	V.G.	Good	Fair	Poor
—	—	3750	1250	600

Orison Blunt P1853 Rifle Muskets

At the beginning of the Civil War, Orison Blunt of New York City attempted to produce a copy of the P1853 rifle musket but with a 40-inch barrel and in .58 caliber. After making several hundred, his proposed contract with the U.S. War Department was declined. Nevertheless, in mid-1862, it is thought that about 1,000 of his rifle muskets were purchased by the U.S. government and sent to Illinois to arm volunteers. Blunt "Enfields" are distinguished by two distinct markings. While most lockplates are totally unmarked, a few are known with the mark "UNION" on the forward part of the lockplate and an eagle impressed into the rounded tail. More importantly, Blunt barrels bear an oval with the letters "DP/B" near the breech. (Note: Not all P1853 rifle muskets with 40-inch barrels were made by Blunt; Birmingham and Liege contractors supplied the Spanish government with a 40-inch barrel copy of the P1853 English rifle musket as well, and some of these were diverted to the American market during the Civil War. These are usually distinguished by the letter "C" in a diamond near the breech of the barrel surrounded by proofmarks.)



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	3750	1250	600

John P. Moore P1853 Rifle Muskets

During the American Civil War arms merchant John P. Moore of New York City received a contract for the delivery of 20,000 P1853 rifle muskets, supposedly to be made in the United States. In fact, most of his contract was made in Birmingham, England, with only 1,080 completely made in the United States. These are distinguished by having an unusual script proofmark on the barrel near the breech instead of the standard Birmingham crossed scepters. These script letters have been interpreted as either "V LB" or "EP I" depending on how they are read. All of Moore's P1853 deliveries bear a distinctive lock marking, consisting of the date forward of the hammer ("1861", "1862", or "1863") and an eagle perched on a shield on the tail. The shield bears the letter "M" in its chief. Moore also delivered 999 short rifles (33" barrels) with the same lock markings. Likewise, all of the barrels on the Moore P1853 rifle musket contract are serially numbered, either on the forward side near the muzzle or on the side of the bayonet lug/front sight. Because the Moore rifles have been misidentified as a product of a North Carolina arms merchant, they tend to command higher prices than are warranted by their numbers.

Exc.	V.G.	Good	Fair	Poor
—	—	2250	900	450

"Brazilian Naval Rifle"

Overall length 48"; barrel length 32"; caliber .58. Markings: on lockplate forward of hammer "D (anchor) C"; the same mark stamped in the wood and metal in various places on the rifle; on barrel, same mark and Liege proofmarks (an oval encompassing the letters E/LG/(star). Although neither made for the English government nor in England, this rifle copies so many features of the English P1856 series rifles as to be easily mistaken for it. The major differences consist of a longer (3-3/8") sight base than the English rifles and a front band/nosecap that also serves as the ramrod funnel. These Liege-made rifles were supposedly made for the Brazilian government, but at the beginning of the American Civil War they were diverted to the United States, about 10,000 being imported. To show their new ownership, a brass shield bearing the U.S. coat of arms was screwed into the wrist of the stock.

Patterns of 1856, 1858, 1860, and 1861 (P1856, P1858, P1860, P1861) Sergeant's Rifles

Overall length 49"; barrel length 33"; caliber .577. The four variations of the short rifle adopted for sergeants in the British Army in 1856 are relatively minor. The P1856 is mainly distinguished by having a short (1/2") key forward of the saber bayonet lug on the right side of the barrel. The P1858 rifle moved this lug to the forward band, permitting the extension of the length of the forestock. (A brass furnished rifle also without the key but with the lug on the barrel was also adopted in 1858 for the Navy; it is distinguished by having its rear sling swivel attached to the trigger guard bow instead of the tail of the trigger guard strap.) The P1860 rifle differed from its predecessors by having five groove rifling instead of three groove. The introduction of a new gunpowder in 1861 permitted the resighting of the ladder on the P1861 rifle to 1,250 yards instead of the 1,100 yards that had been previously used. Significant quantities of these rifles were purchased by both billigerents during the American Civil War; those with proven Southern history will command a premium.

—	—	1650	650	450

Pattern of 1853 (P1853) Artillery Carbine (First, Second, and Third Models)

Overall length 40"; barrel length 24"; caliber .577. Designed for the gunners of the Royal Artillery, this carbine was meant to be slung over the shoulder and accordingly has a sling swivel on the upper band and upon a lug inset into the buttstock. The first model (adopted in 1853), like the sergeant's rifle has a 112" key forward of the saber bayonet lug on the right side of the barrel; in addition to other minor improvements, this key was eliminated in the second model, adopted in 1858. In 1861, a third model was adopted, having five groove rifling and improved rear sight. Approximately 1,000 of the latter type saw service in the American Civil War. Carbines with Confederate stock and buttplate markings will command a premium.

—	—	1650	650	450

Patterns of 1856 (P1856) and Pattern of 1861 (P1861) Cavalry Carbines

Overall length 37" (P1856), 36-1/2" (P1861) barrel length 21"; caliber .577. Due to inadequacies in the various breechloading

carbines tried by the British mounted service, in 1856 the War Department adopted a muzzle-loading carbine incorporating the features of the P1853 series small arms. The earlier version had three groove rifling and a small rear sight with two leaves. In 1861 this was replaced by a larger ladder sight and five groove rifling adopted. More than 6,000 P1856 carbines were imported by the Southern Confederacy during the Civil War to make up for the inadequate supply of carbines. Carbines with verifiable Southern history will command a premium.

ERA

Brazil

Era Double Barrel Shotgun

An inexpensive shotgun chambered for 12 and 20 gauge, as well as .410. It was offered with 26", 28", or 30" barrels with various choke combinations. It has double triggers and extractors, with a checkered hardwood pistol-grip stock. This gun is also available as a Quail model with a 20" barrel and as a Riot model with an 18" barrel. These two models are not offered in .410 bore.

Exc.	V.G.	Good	Fair	Poor
200	150	125	100	75

Era Over-and-Under Shotgun

Chambered for 12 or 20 gauge, with 28" ventilated rib barrels that were choked full and modified. It is a boxlock with double triggers, extractors, and a hardwood stock. It was also offered in a trap model and a skeet model chambered for 12 gauge only and appropriately choked. These latter two models would be worth a 10 percent premium over the values listed.

ERICHSON, G.

Houston, Texas

Erichson Pocket Pistol

A close copy of the Philadelphia-style Henry Deringer. It is chambered for .45-caliber percussion and has a 3.25" barrel. The mountings are German silver and not engraved; the stock is walnut. The hammer is deeply fluted; and the forend, carved. The barrel is marked "G. Erichson / Houston, Texas." The number produced is unknown, but examples are scarce. They were manufactured in the 1850s and 1860s.

ERMA WERKE WAFFENFABRIK

Erfurt, Germany
Post-war
Dachau, Germany

Known primarily as a manufacturer of submachine guns, but they are also in the handgun and rifle business. In 1933 they answered the German army's need for an inexpensive practice weapon by producing a .22 rimfire conversion unit for the Luger pistol. This was marketed commercially and was available for many years. The success of this unit led the company to produce other inexpensive target and plinking pistols. After the war they were reorganized in the western sector and resumed submachine gun production. In 1964 they returned to the sporting firearms business with the introduction of their .22 rimfire Luger-lookalike pistol. Since then, they have produced many like-quality firearms. They were imported by Excam of Hialeah, Florida. This association is now terminated, and they are currently imported by Beeman Precision in Santa Rosa, California, and Mandell Shooting Supplies in Scottsdale, Arizona.

Erma .22 Luger Conversion Unit

Produced for the German army in 1933 and then became a successful commercial item. It would turn a standard 9mm or 7.65mm Luger into an inexpensive-to-shoot .22 rimfire. The unit consists of a barrel insert, a breech block, and toggle unit with its own lightened recoil spring, and a .22 magazine. This unit was furnished with a wooden box. There were many different sized units to fit various caliber and barrel-length Lugers, but all used the same parts and concept. These units have become desirable to Luger collectors.

.22 Target Pistol (Old Model)

A semi-automatic target pistol in caliber .22 LR. This model was offered with 4", 6", or 8" barrels. The frame is made from a cast zinc alloy, and there is an external hammer. There are adjustable sights, and balance weights were available. Magazine capacity is 10 rounds. Weight is about 35 oz. This pistol was manufactured in 1936 and 1937.

600	500	400	300	100

.22 Target Pistol (New Model) Master Model

An improved version of the old model that features a new grip angle and a magazine and takedown device like that of the Luger. There were interchangeable barrels and three basic models — the "Sport," "Hunter," and the "Master." The difference was the length of the barrels — 4", 8", and 12", respectively. Magazine capacity is 10 rounds. Weight is about 39 oz. These pistols were manufactured between 1937 and 1940, when they were discontinued due to Erma's involvement in the war effort.

650	500	400	300	100

KGP-Series

Made to resemble the Luger quite closely. They utilized the mechanical features of the .22 conversion unit and developed a pistol around it. There are many different versions of this pistol chambered for .22 rimfire, .32 ACP, and .380 ACP. The original designation was the KGP-68; but the Gun Control Act of 1968 required that a magazine safety be added, and the model was redesignated the KGP-68A. The last designations for the three calibers are KGP-22, KGP-32, and KGP-38. These pistols were manufactured between 1964 and 1986, and their values are listed.

KGP-68

A 4" barrel and is chambered for the .32 ACP and the .380 ACP cartridges. It has a 6-shot magazine and an anodized alloy receiver. Weight is about 23 oz. This model is also known as the Beeman MP-08.

Courtesy James Rankin

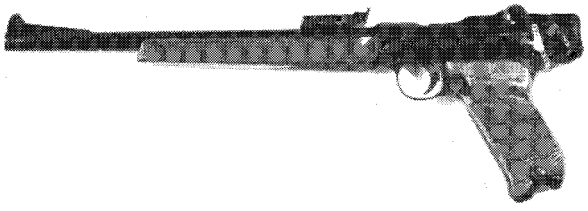
300	200	150	100	75

ET-22 Luger Carbine

A rare firearm. According to some estimates only 375 were produced. It features a 11.75" barrel and is chambered for the .22 rimfire cartridge. It has an artillery Luger-type rear sight and checkered walnut grips, with a smooth walnut forend. The pistol was furnished with a red-felt-lined, black leatherette case.



Exc.	V.G.	Good	Fair	Poor
600	450	300	200	150

KGP-22

The later version of the KGP-69 chambered for .22 rimfire.

350	300	250	200	125

ESP 85A

A high quality target pistol imported by Mandall Shooting Supply. It features an interchangeable barrel system that converts the chambering from .22 rimfire to .32 S&W long wad cutter. The barrels are both 6" in length, and there are adjustable and interchangeable sights and a 5- or 8-shot detachable magazine. Weight is about 41 oz. The finish is blued, and the grips are stippled target types. The gun is furnished in a padded hard case with two extra magazines and takedown tools. This unit was introduced in 1989.

175	125	100	75	50

Errasti Oscillante

Manufactured in the 1920s, these revolvers were copied from the Smith & Wesson Military & Police design. They were chambered for the .32, .38, and .44 calibers with the .38 being the most frequently encountered.

Exc.	V.G.	Good	Fair	Poor
175	125	100	75	50

Dreadnaught, Goliath and Smith Americano

These three trade names were found on a group of poor quality nickel-plated revolvers. They were made from 1905 through 1920 and were obvious copies of the Iver Johnson design. They had break-open actions, ribbed barrel, and were chambered for .32, .38, and .44 calibers. They are scarce today, as most have long since fallen apart.

Exc.	V.G.	Good	Fair	Poor
175	125	100	75	50

ESCODIN, M.

Eibar, Spain

This company made a Smith & Wesson revolver copy from 1924 through 1931. It is chambered for the .32 and the .38 Special. The only marking is a coat of arms stamped on the left side of the frame.

Exc.	V.G.	Good	Fair	Poor
175	125	100	75	50

ESPIRIN, HERMANOS

Eibar, Spain

Euskaro

This poor-quality, often unsafe revolver was manufactured from 1906 until WWI. They are copies of the Iver Johnson design break-open actions, chambered for .32. .38, and .44. This product epitomizes the worst Eibar had to offer during the pre-Civil War era.

EUROPEAN AMERICAN ARMORY CORP.

Witness Pistols

These quality pistols are produced by Tanfoglio, an Italian firm, and imported into the U.S. by European American Armory. These handguns are based on the CZ design and offer many features that are sought after by the shooter such as: competition sights, double-action/single-action trigger system, and internal firing pin lock. The firm was founded by Giuseppe Tanfoglio after WWII. He formed a partnership with Antonio Sabbati and began to manufacture small caliber pistols. During the 1960s the firm also produced derringers and Colt SAA copies. In 1980 the Tanfoglio company decided to enter the service pistol market and copied the respected Czech CZ design. The Tanfoglio company currently produces the P9 series for Springfield Armory and the Desert Eagle line for IMI. In 1993 EAA converted from two frame sizes to one and redesigned the trigger guard and beavertail. This redesigned frame enables all of the different caliber slide assemblies to be interchangeable with one frame. This new configuration began to appear in mid-1993. The buyer should be aware that the EAA Custom Shop offers a wide variety of accessories for its pistols, such as compensators, hammers, ported barrels, grips, etc., that will affect price.

NOTE: Any of the EAA Witness pistols can be supplied with double-action-only triggers at no additional charge.

EAA Witness P-Series Full Size

Introduced in 1998 this is a full size polymer frame pistol chambered for 9mm, .40 S&W, .45 ACP, .38 Super, and 10mm cartridges. Barrel length is 4.55". Overall length is 8.5" with an empty weight of 31 oz. Rear sight is adjustable for windage. Magazine capacity for 9mm is 28 rounds and .40 S&W is 15 rounds while the .45 ACP model holds 10 rounds. For the 10mm model magazine capacity is 15 rounds.

EAA Astra Pistol

SEE—Astra

EVANS REPEATING RIFLE CO.

Mechanic Falls, Maine

Incorporated in 1873, this firm produced repeating rifles based upon patents issued to Warren R. Evans (1868-1871) and later George F. Evans (1877, 1878 and 1879). The most distinctive feature of these arms is that they used a butt magazine operating on the principle of an Archimedean screw. Distributed by Merwin, Hulbert & Company, as well as Schuyler, Hartley & Graham, Evans rifles met with some success. One of their earliest advocates was William F. Cody (Buffalo Bill). The company ceased operations in 1879, after approximately 15,000 arms had been made.

Lever-Action Rifle

This rifle is totally unique for a number of reasons. It holds the most rounds of any repeating rifle that did not have a detachable magazine, with capacities up to 38 rounds on some models. This rifle was chambered for its own cartridge—the .44 Evans of which there were two versions: a 1" cartridge in the "Old Model" and the "Transition Model" and a 1.5" cartridge in the "New Model." The finish on these rifles is blued, with nickel-plated levers and buttplates noted on some examples. The stocks are walnut. There were approximately 12,250 of all models manufactured between 1873 and 1879.

Old Model

This variation is chambered for the 1" .44 Evans cartridge and has a butt stock that covers only the top half of the revolving 34-shot magazine located in the butt of the rifle. The buttplate appears as if it is reversed, and the markings on the "Old Model" are "Evans Repeating Rifle/Pat. Dec. 8, 1868 & Sept. 16, 1871." There are three versions of the Old Model listed. They were manufactured between 1874 and 1876 and serial numbered 1-500.

Military Musket

This version has a 30" barrel, with two barrel bands and provisions for a bayonet. There were only 50 estimated manufactured.

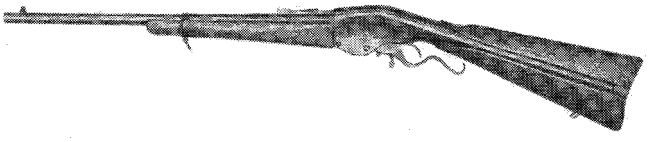
Carbine

This variation has a 22" barrel, with one barrel band and a sling swivel. There were 150 produced.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1150	500

Transitional Model

Has a buttstock that covers both the top and bottom of the rotary magazine, with an exposed portion in the middle of the butt. The buttplate does not have the backward appearance, and the barrel is marked "Evans Repeating Rifle Mechanic Falls Me./Pat Dec. 8, 1868 & Sept. 16, 1871." This version was manufactured in 1876 and 1877 and was serial numbered between 500-2185, for a total of approximately 1,650 manufactured.

Military Musket

Has a 30" barrel and two barrel bands. 150 were produced.

Exc.	V.G.	Good	Fair	Poor
—	—	2750	1200	450

Carbine

Four hundred-fifty of these were produced, with a 22" barrel and one barrel band.

—	—	1750	800	300

"Montreal Carbine"

A special issue marked "Montreal," sold by R.H. Kilby, Evans' Canadian sales agent. There were between 50 and 100 produced.

Exc.	V.G.	Good	Fair	Poor
—	—	2750	1150	450

New Model

Approximately 10,000 of the New Model were produced, chambered for the 1.5" .44 Evans cartridge with a magazine capacity reduced to 28. The frame was redesigned and rounded at the top, and the forend fit flush to the receiver. The lever and hammer are streamlined, and there is a dust cover over the loading gate. The markings are the same as on the Transitional Model with "U.S.A." added to the last line. This version was not serial numbered, and any numbers found are assembly numbers only.

Military Musket

3,000 produced, with a 30" barrel and two barrel bands.

EVANS, WILLIAM

London, England

SEE—British Double Guns

EXCAM

Hialeah, Florida

An importer of firearms; not a manufacturer. The Erma and Uberti products imported by this company are under their own heading in this book. The other products that they imported are listed here. They are no longer in business.

TA 76

Patterned after the Colt Single Action Army and is chambered for the .22 rimfire cartridge. It has a 4.75", 6", or 9" barrel and blue finish with wood grips. It is offered with brass trigger guard and backstrap and also offered chrome-plated. A combo model with an extra .22 Magnum cylinder is available and would add 10 percent to the listed values.

Exc.	V.G.	Good	Fair	Poor
100	75	65	40	25

TA 38 Over-and-Under Derringer

A two-shot derringer patterned after the Remington derringer. It is chambered for the .38 Special cartridge, has 3" barrels that pivot upward for loading, and is blued with checkered nylon grips. This model was discontinued in 1985.

Exc.	V.G.	Good	Fair	Poor
100	75	65	40	25

TA 90

A double-action, semi-automatic copy of the CZ-75 that some experts rate as the finest combat handgun in the world. It is chambered for the 9mm Parabellum and has a 4.75" barrel. It is constructed of steel and is finished with a matte blue or chrome with checkered wood or rubber grips. The detachable magazine holds 15 rounds.

NIB	Exc.	V.G.	Good	Fair	Poor
425	375	325	275	200	150

BTA-90B

A compact version of the TA 90, that has a 3.5" barrel and a 12-round detachable magazine. It is similar in all other respects to the standard model, with rubber grips only.

NIB	Exc.	V.G.	Good	Fair	Poor
425	375	325	275	200	150

TA 90 SS

A competition version of the TA 90, that is similar to the standard model except that it is compensated and features adjustable sights. It is offered either blued or chrome-plated and was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
650	575	500	400	325	225

TA 41, 41C, and 41 SS

This series of pistols is identical to the TA 90 series except that they are chambered for the .41 Action Express cartridge. Their values are about 10 percent higher than the 9mm versions. They were introduced in 1989.

Warrior Model W 722

A double-action revolver chambered for the .22 rimfire and the .22 rimfire Magnum with an interchangeable cylinder. It has a 6" barrel, adjustable sights, and an 8-shot cylinder capacity. It is blued, with checkered plastic grips. This model was not imported after 1986.

Exc.	V.G.	Good	Fair	Poor
100	75	50	35	20

Model W384

A double-action revolver chambered for the .38 Special cartridge, with a 4" or 6" vent rib barrel, blued finish, and plastic grips. It was discontinued in 1986.

Exc.	V.G.	Good	Fair	Poor
175	125	100	75	50

Model W357

Similar to the W384 except that it is chambered for the .357 Magnum cartridge. It was discontinued in 1986.

Exc.	V.G.	Good	Fair	Poor
200	150	125	100	75

Targa GT 26

A blowback-operated, semi-automatic pistol chambered for the .25 ACP cartridge. It has a 2.5" barrel and a 6-shot detachable magazine. It is finished in blue or matte chrome, with a choice of alloy or steel frame. The grips are wood.

F.I.E.
Hialeah, Florida
Firearms Import and Export was engaged in the business of importing the Franchi shotgun (which is listed under its own heading) and the Arminius revolver (which is made in Germany). They were also distributors for the Titan semi-automatic pistols, which are manufactured in the U.S.A. They were also importing a series of 9mm pistols from Italy that are produced by Tanfoglio and known as the TZ series. F.I.E. was no longer in business as of 1990.

TZ 75
A copy of the CZ 75 Czechoslovakian combat pistol produced by Tanfoglio in Italy. It is a 9mm, double-action semi-automatic with a 4.75" barrel, all-steel construction, fixed sights, and a 15-shot magazine. It is offered either blued or matte chrome plated, with wood or rubber grips.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
450	350	300	250	200	150

TZ 75 Series 88
An improved version that is also chambered for the .41 Action Express cartridge. It has a firing pin safety and can be carried cocked and locked. There are a few other minor changes. It was introduced in 1988.

150	60	45	35	25	20

D86 Derringer

A single-shot derringer with a 3" barrel. It is chambered for the .38 Special cartridge and is chrome-plated. There is an ammntion storage compartment in the butt and a transfer bar safety that makes it safer to carry. This model was introduced in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
150	80	65	50	35	20

SINGLE-ACTION ARMY REPLICA REVOLVERS

There is a series of single-action, .22 caliber revolvers that were patterned after the Colt Single-Action Army. They were manufactured in the U.S.A. or Brescia, Italy. They are inexpensive and of fair quality. The differences between these models are basically barrel lengths, type of sights, and finish. They all are chambered for the .22 LR and have interchangeable .22 Magnum cylinders. We list them for reference purposes.

225	100	80	65	50	35

Standard Revolver

A double-action, swing-out cylinder revolver chambered for .32 Magnum or .38 Special. It has a 4" or 6" barrel and fixed sights and is blued with wood grips. This model is made in the U.S.A. and was introduced in 1989.

NIB	Exc.	V.G.	Good	Fair	Poor
225	100	75	50	35	20

Models 384TB and 386TB

These two models are double-action chambered for the .38 Special cartridge. The 384 has a 4" barrel; and the 386, a 6" barrel. They are available in blue or chrome plate and were discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
250	125	100	85	65	50

Model 357TB

Similar to the 384TB except that it is chambered for the .357 Magnum cartridge and is offered with a 3", 4", or 6" barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
250	125	100	85	65	50

222, 232, and 382TB

These models are double-action swing-out cylinder revolvers chambered for .22 rimfire, .32 S&W, and .38 Special. They are 2"-barreled snub-nosed revolvers, with either blued or chrome-plated finishes. They were discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
200	100	75	50	40	25

Model 3572

A similar revolver to the 382TB except that it is chambered for the .357 Magnum cartridge. It was discontinued in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
250	125	100	85	65	50

SHOTGUNS AND RIFLES

Model 122

A bolt-action rifle chambered for .22 rimfire, with a 21" barrel and adjustable sights. It has a 10-shot magazine and a walnut Monte Carlo stock. It was introduced in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
200	100	75	50	35	25

Single-Shot

Brazilian made and chambered for 12 or 20 gauge and .410. It is a single-barreled break open, with 25" through 30" barrel and various chokes. It is blued with a wood stock and was introduced in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
150	100	60	45	35	25

S.O.B.

Similar to the single-shot, with an 18.5" barrel and a pistol grip instead of a standard stock. This model was discontinued in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
165	110	60	45	35	25

Sturdy Over-and-Under

Chambered for 12 and 20 gauge and has 3" chambers and 28" vent-rib barrels with various chokes. This is an over-and-under with double triggers and extractors. The frame is engraved and silver finished. It was manufactured in Italy by Maroccini and imported between 1985 and 1988.

NIB	Exc.	V.G.	Good	Fair	Poor
400	300	225	175	150	100

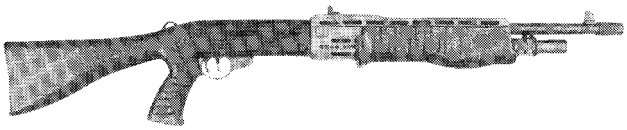
Brute

A side-by-side chambered for 12 and 20 gauge and .410. It has 19" barrels, double triggers, and extractors. It has a wood stock and was dropped from the line in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
300	200	125	100	75	50

SPAS-12

A unique shotgun in that it can function as a pump or an automatic with the touch of a button. It is a paramilitary-type shotgun chambered for 12 gauge, with a 21.5" barrel and a 9-shot tube magazine. It has an alloy receiver and a folding stock. The finish is all black. This model is manufactured by Franchi in Italy.



NIB	Exc.	V.G.	Good	Fair	Poor
1500	1100	900	700	400	300

Law-12

A paramilitary-type, 12-gauge, semi-automatic shotgun that is gas-operated and has a 9-shot tube magazine. The barrel is 21.5" in length and choked cylinder bore. It has a military special black finish and a black synthetic stock.

NIB	Exc.	V.G.	Good	Fair	Poor
750	550	400	300	200	100

SAS-12

A paramilitary-type, slide-action shotgun chambered for 12 gauge. It has a 21.5" barrel, choked cylinder bore. The finish is similar to the LAW-12, and it is manufactured by Franchi in Italy.

NIB	Exc.	V.G.	Good	Fair	Poor
850	650	500	400	300	200

375	350	—	—	—	—

FP6

This model is a 12 gauge slide-action shotgun with 3" chamber, 20" barrel with heat shield, black polymer stock, threaded barrel for exterior chokes. Weight is about 6.6 lbs. This model is also available with a carbon fiber finish.

NIB	Exc.	V.G.	Good	Fair	Poor
500	400	—	—	—	—

FP6 with Rail

Introduced in 1999, this model is similar to the standard FP6 with the addition of a Picatinny rail mounted on the top of the receiver. Also fitted with a flip-up front sight. In 2003 this model was offered with a 20" tri-bore barrel with barrel threaded choke, new style front sight, and ghost ring rear sight.

NIB	Exc.	V.G.	Good	Fair	Poor
510	410	300	—	—	—

NOTE: This model is also available with 14" barrel. This requires a BATF tax and all NFA rules apply to purchase and sale of this restricted shotgun. An accessory wire stock and pistol grip are available for an additional $150.

OVER/UNDER GUNS

Max Lion

This over/under gun is chambered for the 12 or 20 gauge, 3" shell and fitted with single-selective trigger, auto ejectors, high grade walnut stock, leather covered recoil pad, set of five choke tubes and a fitted luggage-style case. Choice of 26", 28", or 30" barrels on 12 gauge guns and 26" or 28" on 20 gauge guns. Weight is about 7.5 lbs. for 12 gauge and 7 lbs. for 20 gauge.

Max Lion 12 gauge

NIB	Exc.	V.G.	Good	Fair	Poor
1200	900	700	—	—	—

NOTE: In 1999 the Max Lion was offered with the TriBore barrel system. For models with this system add $70 to above NIB prices.

Max Lion Light

Introduced in 2000 this model features 24" barrels in both 12 and 20 gauge. Receiver has gold game bird inlay. Single trigger, automatic ejectors and select walnut stock. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	900	—	—	—	—

Max Lion Paradox

Introduced in 2002 this model features a 12 gauge 3" gun with 24" barrels. The bottom barrel is rifled. Case hardened receiver with checkered walnut stock. Weight is about 7.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1425	1175	—	—	—	—

Sporting Clays Competition Lion

This model is available in 12 or 20 gauge with 28" 10mm channeled rib barrels. Single-selective trigger and automatic ejectors. Recoil reducer installed in buttstock. Ported barrels. Set of 5 choke tubes standard. Leather covered recoil pad. High grade walnut stock. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor
675	550	—	—	—	—

Sporting Clays Max Lion

Chambered for the 12 gauge 3" shell and fitted with a 32" tribore vent rib barrel. Select walnut stock with hand checkering, adjustable trigger, and leather covered recoil pad. Engraved gold inlay receiver is case colored. Supplied with eight choke tubes. Weight is approximately 7.9 lbs. Introduced in 2003.

NIB	Exc.	V.G.	Good	Fair	Poor
750	600	—	—	—	—

Sporting Clays Competition Extra

This 12 gauge model features a a choice of 28" or 30" barrels. Walnut stock is adjustable. Finish is carbon fiber. Gun is supplied with set of eight choke tubes. Introduced in 2000. Weight is about 7.8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	775	—	—	—	—

Black Lion Competition

Similar to the Max Lion in choice of gauges and barrel lengths and features but with less figured walnut stock and black receiver finish.

Black Lion 12 gauge

1050	750	—	—	—	—

Monotrap

This is a single barrel trap gun with 30" vent-rib barrel. Forearm has built-in recoil reduction system. Single-selective trigger and automatic ejectors. Adjustable comb. This shotgun is a 12 gauge built on a 20 gauge receiver. Weight is about 6 lbs. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
1500	1150	—	—	—	—

Silver Lion

This model is available in both 12 and 20 gauge and with 26", 28" barrel and 30" barrels in 12 gauge. The silver finish receiver is etched and stock is high quality walnut with leather covered pad. Scalable forearm is standard and is single-selective trigger and auto ejectors. Five chokes tubes are included. Weight is about 7.5 lbs. for 12 gauge guns and 7 lbs. for 20 gauge.

Silver Lion 12 gauge

Silver Lion 20 gauge

NIB	Exc.	V.G.	Good	Fair	Poor
750	600	—	—	—	—

Silver Lion Youth

This 20 gauge over-and-under features a shortened buttstock and 24" ported barrels. Single-selective trigger and automatic ejectors standard. Walnut stock. Rubber recoil pad. Silver steel receiver. Weight is approximately 6 lbs. Introduced in 1999.

NIB	Exc.	V.G.	Good	Fair	Poor
700	575	—	—	—	—

Super Light Lion Youth

Similar to the Silver Lion Youth model but chambered for 12 gauge shells. Aluminum receiver and 24" ported barrels. Introduced in 1999. Weight is about 6.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
675	550	—	—	—	—

Ultra Mag Lion

This model is a 12 gauge gun with 3.5" chambers, black receiver, single-selective trigger, auto ejectors, blackened walnut stock, leather covered recoil pad, and set of five choke tubes. Barrel length is 28". Weight is 7.9 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
725	675	—	—	—	—

Super Light Lion

This model features a lightweight alloy receiver with 12 gauge 24" barrels, single-selective trigger, non-auto ejectors, walnut stock, five choke tubes, and leather covered recoil pad. Weight is about 6.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
700	600	—	—	—	—

NOTE: For TriBore system add $125.

Camo Turkey Mag.

Introduced in 1999, this model features an unported TriBore 20" barrel. Receiver has Picatinny rail on top. Full extra brown camo finish. Chambered for 12 gauge with 3.5" chambers. Weight is about 7.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
600	525	—	—	—	—

Ultra Camo Mag. Lion

This 12 gauge 3.5" model is fitted with 28" barrels. Wetlands camo pattern finish. Non-automatic ejectors. Weight is about 8 lbs. Introduced in 1999. Standard with steel screw-in chokes and regular screw-in chokes.

650	575	—	—	—	—

SIDE-BY-SIDE GUNS

Classic Lion Grade I

Offered in 12 gauge with 3" chambers, single-selective trigger, auto-ejectors, walnut stock, buttplate, and fitted with 26" barrels. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	750	—	—	—	—

Classic Lion Grade II

Similar to the Grade I but with the addition of oil finished stock and removable sideplates with game scene engraving. Weight is 7.2 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1250	1000	—	—	—	—

Classic Lion Elite

Introduced in 2002, this 12 gauge model features 26" or 28" barrels with case colored receiver and straight grip stock. Fixed chokes. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1300	1025	—	—	—	—

FABBRI, ARMI

Gardone V.T., Italy

Fabbri Armi currently manufactures one of the best shotguns in the world. They are available as a custom made-to-order item, and they are not often seen in the used gun market. The values for guns of this nature and quality are impossible to accurately establish in a book of this nature as there are so many options and conditions that make the prices fluctuate greatly. We give an estimated figure as a base starting point. See Karl Lippard's book *Fabbri Shotguns*, Colorado Springs, Colorado, VM Publications, 1998, for more value details

Side-by-Side Shotgun

Chambered for 12 or 20 gauge with all other features on a custom-order basis. This model is no longer in production.

NIB	Exc.	V.G.	Good	Fair	Poor
38500	25000	17500	15000	10000	8000

NOTE: Deduct $10,000 for type One Model.

Over-and-Under Shotgun

Chambered for 12 or 20 gauge with all other features on a custom-order basis. Prices listed are for Boehler barrels.

NIB	Exc.	V.G.	Good	Fair	Poor
39500	25000	17500	15000	10000	8000

NOTE: Add 50 percent for vacuum arc remelted steel barrels. Deduct 50 percent for Phoenix barrels.

FABRIQUE NATIONALE

Herstal, Belgium

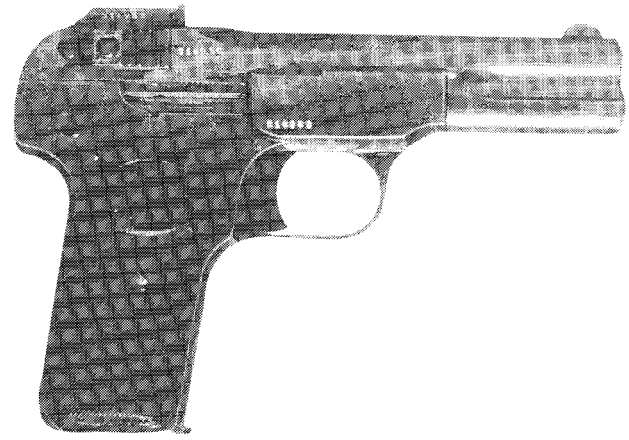
In 1889 Fabrique Nationale (or FN) was founded by a group of Belgian investors for the purpose of manufacturing Mauser rifles for the Belgian army. This was to be accomplished under license from Mauser, with the technical assistance of Ludwig Loewe of Berlin. A few years later, in the late 1890s, John Browning arrived in Europe seeking a manufacturer for his semi-automatic shotgun. He had severed his ties with Winchester after a disagreement. This led to a long association

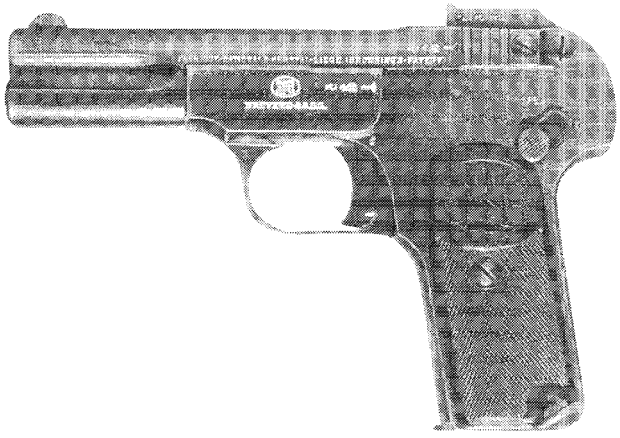
that worked out extremely well for both parties. Later Browning became associated with Colt, and the world market was divided—with the Eastern Hemisphere going to FN and the Western Hemisphere to Colt.

In this section, we list arms that bear the FN banner. The FN-manufactured firearms produced under the Browning banner are listed in the Browning section of this book.

Model 1900

A blowback-operated semi-automatic pistol chambered for the 7.65mm cartridge. It has a 4" barrel and fixed sights and is blued with molded plastic grips. This model is notorious as the pistol that was used to assassinate Archduke Ferdinand, an event that touched off WWI. It was manufactured between 1899 and 1910. This model is referred to as the "Old Model."





Exc.	V.G.	Good	Fair	Poor
500	375	310	200	150

Model 1903

A considerable improvement over the Model 1900. It is also a blowback-operated semi-automatic; but the recoil spring is located under the barrel, and the firing pin travels through the slide after being struck by a hidden hammer. The barrel is held in place by five locking lugs that fit into five grooves in the frame. This pistol is chambered for the 9mm Browning long cartridge and has a 5" barrel. The finish is blued with molded plastic grips, and the detachable magazine holds 7 rounds. There is a detachable shoulder stock/holster along with a 10-round magazine that was available for this model. These accessories are extremely rare and if present would make the package worth approximately five times that of the pistol alone. There were approximately 58,000 manufactured between 1903 and 1939.

Exc.	V.G.	Good	Fair	Poor
550	425	375	275	175

Model 1906

A smaller version of the Model 1903, designed to be a pocket pistol and chambered for the 6.35mm cartridge. It became known as the "Vest Pocket" model and was also the basis for many Eibar copies. It has a 2.5" barrel and was produced in two distinct variations. The first variation had no safety lever or slide lock and relied on the grip safety. The second variation, that occurred at approximately serial number 100000, added this safety lever and slide lock, which helped simplify dismantling of the pistol. This model was available either blued or nickel-plated. The plated models would bring a 10 percent premium. There were approximately 1,086,100 manufactured between 1906 and 1959.

1st Variation, Under Serial Number 100000

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
425	300	250	200	125

2nd Variation, Over Serial Number 100000

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
400	275	200	175	100

Model 1910 "New Model"

Chambered for 7.65mm and 9mm short. It has a 3.5" barrel, is blued, and has molded plastic grips. The principal difference between this model and its predecessors is that the recoil spring on the Model 1910 is wrapped around the barrel. This gives the slide a more graceful tubular appearance instead of the old slab-sided look. This model has the triple safety features of the 1906 Model 2nd variation and is blued with molded plastic grips. This model was adopted by police forces around the world. It was manufactured between 1912 and 1954.

Model 1922

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
350	225	175	125	100

"Baby" Model

A smaller and lighter version of the Model 1906. It is chambered for the 6.35mm cartridge and has a 2" barrel. There is no grip safety or slide lock on this model, and it appears to be more square in shape than the Model 1906. This model was offered in blue, with molded plastic grips. Early models have the word "Baby" molded into the grips; post-1945 versions do not. There is also a nickel-plated version with pearl grips. There were over 500,000 of these manufactured between 1931 and 1983.

525	375	300	225	150

Model 1935/Hi-Power/GP

The last design from John Browning and was developed between 1925 and 1935. This pistol is known as the Model 1935, the P-35, Hi-Power or HP, and also as the GP (which stood for "Grand Puissance") and was referred to by all those names at one time or another. The HP is essentially an improved version of the Colt 1911 design. The swinging link was replaced with a fixed cam, which was less prone to wear. It is chambered for the 9mm Parabellum and has a 13-round detachable magazine. The only drawback to the design is that the trigger pull is not as fine as that of the 1911, as there is a transfer bar instead of a stirrup arrangement. This is necessary due to the increased magazine capacity resulting in a thicker grip. The barrel is 4.75" in length. It has an external hammer with a manual and a magazine safety and was available with various finishes and sight options and was furnished with a shoulder stock. The Model 1935 was used by many countries as their service pistol as such there are many variations. We list these versions and their approximate values.

Pre-war Commercial Model

Found with either a fixed sight or a sliding tangent rear sight and is slotted for a detachable shoulder stock. It was manufactured from 1935 until 1940.

Fixed Sight Version

Exc.	*V.G.*	*Good*	*Fair*	*Poor*

German Military Pistole Modell 640(b)

In 1940 Germany occupied Belgium and took over the FN plant. The production of the Model 1935 continued, with Germany taking the output. The FN plant was assigned the production code "ch," and many thousands were produced. The finish on these Nazi guns runs from as fine as the Pre-war Commercial series to downright crude, and it is possible to see how the war was progressing for Germany by the finish on their weapons. One must be cautious with some of these guns as there have been fakes noted with their backstraps cut for shoulder stocks, producing what would appear to be a more expensive variation. Individual appraisal should be secured if any doubt exists.

Captured Pre-war Commercial Model

These pistols were taken over when the plant was occupied. They are slotted for stocks and have tangent sights. There were few produced between serial number 48,000 and 52,000. All noted have the WA613 Nazi proof mark. Beware of fakes!

Exc.	V.G.	Good	Fair	Poor
1700	1400	1150	750	500

Post-war Military Contract

Manufactured from 1946, and they embody some design changes—such as improved heat treating and barrel locking. Pistols produced after 1950 do not have barrels that can interchange with the earlier model pistols. The earliest models have an "A" prefix on the serial number and do not have the magazine safety. These pistols were produced for many countries, and there were many thousands manufactured.

WARNING

A large number of counterfeit FN Hi-Powers have been shipped to the United States, possibly from the Balkans. The slides are marked just like the FN originals but the fit and finish is of poor quality. These pistols are missing numerous small proof stamps and markings normally found on FN pistols. These counterfeits have a serial number on the front of the grip strap with a single letter prefix. All are fitted with the late style extractor. Metal finish is either a military matte blue or a commercial high gloss blue.

FARROW ARMS CO.

Holyoke, Massachusetts
Mason, Tennessee

Farrow Falling Block Rifle

Designed by W.M. Farrow, a target shooter who had worked on the Ballard rifles for the Marlin company. The Farrow rifles are chambered for various calibers and have barrel lengths from 28"-36" of octagonal configuration. They feature tang sights and are either all blued or have a nickel-plated receiver. The stocks are walnut. There were two grades offered that varied according to the grade of wood used. These rifles are quite scarce on today's market, and the number manufactured between 1885 and 1900 is unknown.

No. 1 Model

Fancy walnut with checkering and a Schutzen buttplate.

Exc.	V.G.	Good	Fair	Poor
—	—	11000	4500	1950

No. 2 Model

Plainer wood and no checkering.

FAYETTEVILLE ARMORY PISTOLS AND RIFLES

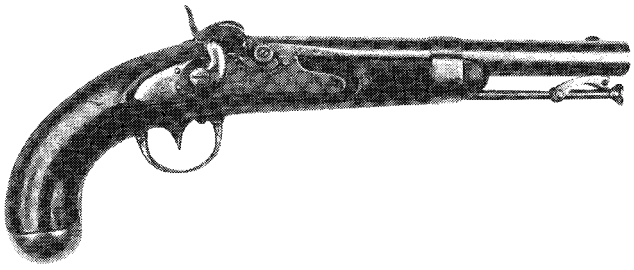
Fayetteville, North Carolina

In 1861, the U.S. Arsenal at Fayetteville, North Carolina, was seized by the officials of that state and later turned over to the government of the Confederate States of America. While still controlled by the state of North Carolina, a number of inferior flintlock arms were altered at the arsenal from flint to percussion, including a number of U.S. M1836 pistols and U.S. M1819 Hall rifles (the latter also shortened and remodeled into cavalry carbines). In accordance with an agreement between the governors of Virginia and North Carolina, the rifle machinery seized at the former U.S. Armory at Harpers Ferry, Virginia, was also sent to Fayetteville, where in 1862 the Confederacy began the construction of rifles modeled after the U.S. M1855 rifle. Production continued until 1865 when the advance of Sherman's armies necessitated the evacuation of the armory.

Fayetteville Armory Percussion Pistols (U.S. M1836 Pistols, Altered)

Overall length 13-1/4"; barrel length 8-1/2"; caliber .54. Markings: same as U.S. M1836 contact pistols, i.e. the locks either marked with eagle head over "A. WATERS/MILBURY MS./(date)" or "US/R. JOHNSON/MIDDN CONN./(date)" and various barrel proofmarks; also occasionally marked "N. CAROLINA."

The Fayetteville Armory altered approximately 900 U.S. M1836 pistols from flintlock to percussion. These arms were altered by enlarging the flint touchhole and screwing in a cylindrical drum in place of the pan and frizzen. The distinguishing feature of the Fayetteville alteration is the clean-out screw at the face of the cylinder and the "S" shaped hammer, not unlike that used on post-1862 dated rifles.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2750	1350	950

Fayetteville Armory Rifles (Types I through IV)

Overall length 49-1/8"; barrel length 33"; caliber .58. Markings: on barrel, an eagle over "C.S.A./FAYETTEVILLE" forward of the hammer and the date on the rounded tail. "CSA" also found on buttplates; date on top of barrel; proofmarks (eagle head, "V" and "P") on left quarter of barrel near breech.

From 1862 to early 1865, the Fayetteville Armory produced four variants of the old U.S. M1855 rifle on the machinery that had been lent to North Carolina by Virginia after its capture in April 1861. The earliest 1862 production (Type I) utilized unmilled lockplates captured at Harpers Ferry and are distinguished by having a "hump" (where the Maynard primer would have been milled) that extends to the arc of the hammer. Type II production utilized the newly made locks received from Richmond during the balance of 1862; they had a relatively low "hump" whose upper surface matched the contour of the stock. By the end of 1862, Fayetteville was producing its own lock, the plate of which resembled the U.S. M1861 rifle musket, but with a distinctive "S" shaped hammer. This lock distinguishes both type III and type IV production. All rifles made through 1863 continued to bear a saber bayonet lug on the right side of the barrel. In 1864, however, this was eliminated in favor of a triangular socket bayonet. The absence of the saber bayonet lug and remodeled front sight distinguishes type IV production. Because the barrel machinery went to Richmond, production at Fayetteville was continually hindered, seldom reaching more than 300 per month in the three years that the Fayetteville rifle was manufactured. (Note: The rarity of Type I production will usually generate a premium for that variant.)

FEDERAL ORDNANCE, INC.

South El Monte, California

An importer as well as a manufacturer that basically fabricates new and custom firearms out of existing older military parts. The firearms they import are military surplus weapons. The firearms covered here are of Federal Ordnance manufacture.

M-14 Semi-Automatic

A semi-automatic version of the M-14 service rifle. It is constructed of a newly manufactured receiver that has no selector and select surplus G.I. parts. The rifle is refinished to original specifications and furnished with a 20-round magazine and either a wood or fiberglass stock. This model was introduced in 1986. Although this model is a battle rifle and falls into the category affected by the wild price fluctuations we have been experiencing, prices for this gun have stayed fairly stable due to a fairly constant supply. This model has been manufactured since 1986.

FEG (FEGYVER ES GAZKESZULEKGYAR)

Budapest, Hungary

Rudolf Frommer was a first-class engineer who became associated with Fegyvergyar in 1896. In 1900 he became the manager and held that position until his retirement in 1935. He died one year later in 1936. His designs were successful and prolific. They were used militarily and sold on the commercial market as well.

Model 1901

An odd pistol that was not successful at all. It was chambered for an 8mm cartridge that was the forerunner of the 8mm Roth Steyr. It has a long, slender barrel, which was actually a collar with the barrel within. It has a rotary bolt and external hammer and is recoil-operated. There is a 10-round integral magazine, and it is loaded from the top via a stripper clip. This pistol was manufactured from 1903 to 1905.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
2200	1750	1000	700	350

Model 1906

An improved version of the 1901, chambered for the 7.65mm Roth-Sauer cartridge. It is, for all intents and purposes, the same action; but on later models a detachable 10-round magazine was adopted. It was manufactured between 1906 and 1910 in small quantity.

Exc.	V.G.	Good	Fair	Poor
2200	1750	1000	700	350

Model 1910

The final version in this series of pistols and is similar with the addition of a grip safety. Chambered for 7.65mm Browning.

Exc.	V.G.	Good	Fair	Poor
2500	1950	1100	700	350

Frommer Stop Model 1912

A semi-automatic pistol in caliber 7.65mm or 9mmK. It is unusual in that it operates on a long recoil system. Frommer is stamped on the slide as well as the Frommer Stop logo on each side of the wood or plastic grip plates.

Courtesy James Rankin

FEMARU

Budapest, Hungary

Hungary became a communist satellite in the mid-1950s. At this time the Femaru company was designated to replace the firm of Fegyvergyar as the official Hungarian arms manufacturer. The products are of good quality.

Model 37

This semi-automatic pistol was built in both 7.65mm and 9mm Short calibers. It is well designed pistol of quality construction. It is fitted with a grip safety and exposed hammer. The Hungarian military adopted the pistol in 1937. It was produced until the late 1940s. Early guns were marked "Femaru Fegyver es Gepgyar RT Budapest" but during the war the Nazi code for these guns was "jhv." The 9mm models have a 7-round magazine while the 7.65 models have an 8-round magazine. During World War II the Germans designed this pistol the "Pistol Mod 37 Kal 7.65 (Ung)." Add 75 percent for Nazi proofed examples.

FERLACH

Ferlach, Austria

Text by Joseph M. Cornell Ph.D., A.M.A.

The history of gun making in Ferlach began in the early 1500s and continues to the present. Today, there are 13 companies making guns in this beautiful city of about 5,000 inhabitants, which is located in a remote corner of southern Austria. These companies make guns that are among the world's most beautiful and finest. Their price range, at the low end, for a bolt-action rifle is from $5,000 to the high end, for one of their high art guns, at $500,000, or perhaps even more.

These companies are family groupings. Many of these families have been making guns for centuries. For them, gun making is an all-consuming tradition. Some of the best known of these families, and most often encountered in the United States, have names such as Just, Hauptmann, Winkler, Michelitsch, Hambrusch, Scheiring, and Borovnik, etc. Other less well-known makers include Juch, Fanzoj, Glanzig, Koschat, Hofer and Zauner. Some of the companies from the past, such as Franz Sodia are no longer in business and guns from these now extinct companies will be occasionally encountered. But whether or not the families are still in business, Ferlach guns are some of the most beautiful and remarkable examples of the gunmaker's art that are to be found anywhere in the world. A Ferlach gun can be recognized, although not always easily, by the following:

1. Many times the city name "Ferlach" will be found on the gun.
2. Many times a recognizable Ferlach maker's name will be found on the guns, such as ones listed above, but not all Ferlach-made guns will have a maker's name on the gun.
3. Ferlach guns are usually made in the typical "German" style.
4. Ferlach guns usually have a unique type of serial number, which contains a two-digit number followed by a period, ".", e.g. XX.XXX. This serial number can sometimes by used to identify the maker.

Along with the companies in Ferlach, which make guns, there is also a Gunmaker's Consortium, which is owned by 12 of these companies. This Consortium provides a variety of services and products for gun makers both in Ferlach and in other locations as well. The Consortium acts as an engineering and mechanical "Center" that is an essential resource for many of the Ferlach gun makers. The Consortium uses three basic types of the steel to make the barrels: Boehler Antinit, Blitz and Super Blitz. The latter allows the thickness of the barrels to be reduced to a minimum, thus reducing the gun's final weight. Antinit is the most often encountered steel and the least expensive of the steel used in Ferlach guns.

While it is not generally known, many of the makers outside Ferlach, who make some of the world's most expensive guns, do not make their own barreled actions. They buy the actions and put their names on them. This is not true of the Ferlach maker. The actions used in their guns, with the exception of bolt-action rifles, are made right there in Ferlach by the Consortium and then finished by the individual maker. This allows for maximum efficiency and the technical control of the guns being made.

Ferlach gun makers produce almost all types of hunting weapons; these include bolt-action rifles, double rifles, three barreled rifles, drillings, shotguns, guns combining both rifles and shotguns called "combination guns," four barreled guns and even five barreled guns. Ferlach makers are very talented gunsmiths and as a result not only can they make the finest

possible guns but they are also able to make guns that would be difficult or impossible for other makers to construct. Furthermore, Ferlach is one of the few centers of gun making in the world where it is still possible to order guns in almost any configuration and in almost any caliber from the small .22 LR to the .600 nitro express or even larger.

In addition to the companies that manufacture guns, Ferlach is the home of many of the world's best engravers. Many of the Ferlach makers have in-house engravers but many do not and almost all the companies send out work for special situations. A list of some of the engravers whose work will be found on Ferlach guns would include names such as Krondofer, Mack, Orou, Schaschl, Singer, Maurer, Widmann, Stogner, de Florian, Plucher and Obiltschnig.

Almost all Ferlach guns are "custom" made guns. This makes each gun somewhat unique, which makes their valuation difficult. There is, however, as with other gunmakers, almost always a relationship between quality, complexity of construction, functionality, beauty, rarity and value/pricing.

FERLIB

Gardone V.T., Italy

Model F.VI

A high-grade, side-by-side shotgun chambered for all gauges and is essentially custom-ordered. It is available in various barrel lengths and chokes and has an Anson and Deeley boxlock-action, double triggers, and automatic ejectors. The action is case-colored, and the stock is hand-checkered select walnut. Single-selective triggers are available for an additional $375.

NIB	Exc.	V.G.	Good	Fair	Poor
4500	3500	—	—	—	—

NOTE: 28 gauge and .410 add 10 percent.

Model F.VII

Has a scroll-engraved, coin-finished frame but otherwise is similar to the Model F.VI. Single trigger option and small gauge premium are the same.

NIB	Exc.	V.G.	Good	Fair	Poor
11000	8000	—	—	—	—

Model F.VII/SC

A more deluxe version with gold inlays and a game scene-engraved receiver. Options and premium are the same.

NIB	Exc.	V.G.	Good	Fair	Poor
12000	9000	—	—	—	—

Model F.VII Sideplate

Features false sideplates that are completely covered with game scene engraving. This model is standard with a single-selective trigger, but the small gauge premium is applicable.

NIB	Exc.	V.G.	Good	Fair	Poor
14000	10000	—	—	—	—

Model F.VII/SC Sideplate

The false sideplate model with gold inlays accenting the full coverage engraving.

NIB	Exc.	V.G.	Good	Fair	Poor
15000	11000	—	—	—	—

NOTE: 28 gauge and .410 add 10 percent.

Hammer Gun

Features a boxlock action with external hammers. Its other features are custom ordered to the purchaser's specifications.

FIALA ARMS COMPANY

New Haven, Connecticut

Fiala Repeating Target Pistol

A different type of pistol than what is commonly encountered. Outwardly it resembles a semi-automatic Colt Woodsman; in actuality it is a manually operated firearm that must be cycled by hand after every shot. It was chambered for the .22 rimfire and was offered with interchangeable barrels in lengths of 3", 7.5", and 20". Also offered was a detachable buttstock. The finish is blued, and the grips are found in both smooth and ribbed walnut. The rear sight is a square-notched blade that tips up into an elevation-adjustable peep sight. They are marked "Fiala Arms and Equipment Co. Inc. / New Haven Conn. / Patents Pending" on the right side of the frame behind the grip and Model 1920/Made in U.S.A. on the right side of the frame above the trigger guard. The left side of the frame was marked "FIALA ARMS" above the image of the polar bear with the "TRADE MARK" below the polar bear in the area above the trigger guard. This pistol was also furnished in one of three variations of cases that were optionally available: a canvas case, a black leatherette case, velvet-lined and fitted with a lock and key, and a tan leather version of the leatherette case. A fixed 7.5" barrel variation was also produced. A 7.5" smoothbore barrel was catalogued as a silencer. Some 20" smoothbore barrels were produced. Some pistols bear the names "Columbia Arms Company," and "Botwinik Brothers." The government has classified this pistol with its stock as a "Curio or Relic" and in its complete state is a very desirable collectible.

FLORENCE ARMORY

Florence, Guilford Counry, North Carolina

Founded in 1862 as a repair facility to alter sporting arms for military use. Majority of work done by H.C. Lamb & Company. In 1862, Captain Z. Coffin ordered stocks, barrels and locks to assemble newly made rifles. Furniture of these arms varied, either being supplied by Glaze & Company or being the remainders from Searcy & Moore's production. Number made estimated to be in excess of 300 rifles in both .50 and .54 calibers. These arms (particularly the barrels) exhibit characteristics of North Carolina contract pieces.

FOX, A. H.

Philadelphia, Pennsylvania

Ansley H. Fox established the Fox Gun Company in Baltimore, Maryland, in 1896. Subsequently, he made arms under the name Philadelphia Gun Company. As of 1905, he operated under the name A.H. Fox. In 1930, this company was purchased by the Savage Arms Company who continued manufacturing all grades of Fox shotguns. As of 1942, the Savage Company only made the plainer grades.

NOTE: Fox Model B double shotguns see Savage Arms Co.

Sterlingworth

A 12, 16, or 20 gauge boxlock double-barrel shotgun with 26", 28", or 30" barrels, double triggers and extractors. Automatic ejectors were also available and would add approximately 30 percent to the values listed. Blued, casehardened with a walnut stock. Manufactured from 1911 to 1946.

Courtesy Nick Niles, Paul Goodwin photo

Exc.	V.G.	Good	Fair	Poor
1500	1100	875	500	275

NOTE: 20 gauge add 50 percent. Add 25 percent for 16 gauge.

Sterlingworth Deluxe

As above, with an ivory bead, recoil pad and optional 32" barrel.

Exc.	V.G.	Good	Fair	Poor
1600	1400	1100	700	400

NOTE: 20 gauge add 50 percent. Add 25 percent for 16 gauge.

SP Grade

A 12, 16, or 20 gauge boxlock double-barrel shotgun with varying length barrels, double triggers and extractors.

Exc.	V.G.	Good	Fair	Poor
1100	925	825	450	225

NOTE: 20 gauge add 35 percent. Automatic ejectors add 15 percent. Add 25 percent for 16 gauge.

HE Grade

Similar to the early A Grade and offered in 12 and 20 gauge. Chambers were 2-1/4" standard with 3" chambers available on request. This model is marked on the barrel "Not Warranted." this referred to pattern density, not barrel quality. Only sixty 20 gauge HE Grades appear in factory records. Manufactured from 1923 to 1942.

Exc.	V.G.	Good	Fair	Poor
2750	2400	1925	1000	650

NOTE: Single-selective trigger add 20 percent. Add 30 percent premium for 20 gauge.

High Grade Guns A-FE

The Fox Company as well as the Savage Arms Company produced a variety of shotguns decorated in varying grades. They were available in 12, 16, and 20 gauge. As the value for these arms depends on the particular features of these arms, prospective purchasers are advised to secure a qualified appraisal prior to acquisition.

NOTE: A 25 percent premium should be added to the grades below for small gauge guns and guns with single selective trigger.

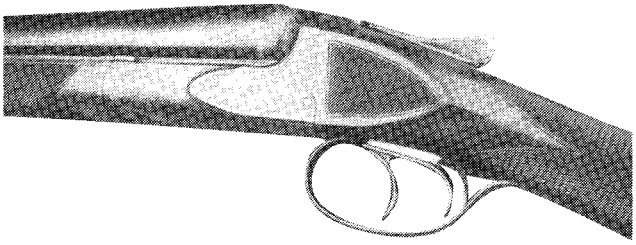
RECENTLY MANUFACTURED A.H. FOX SHOTGUNS

In 1993 the Connecticut Manufacturing Company of New Britain, Connecticut, announced the production of the A.H. Fox shotgun in 20 gauge exclusively. The gun is hand-built and

constructed to the same dimensions and standards as the original Fox. The gun is offered in five grades with many standard features and several optional ones as well. Each shotgun is built to order. Because these guns are newly built and have no pricing history, only manufacturer's retail price for the base gun will be given. Extra sets of barrels, single triggers, and other extra costs options will greatly affect price.



CE Grade

Receiver engraved with fine scroll and game scene engraving with Turkish Circassian walnut stock, fine line hand checkering. Choice of full, half, or straight grip with splinter forend. Double triggers, automatic ejectors, automatic safety, choice of chokes, and barrel lengths in 26, 28, and 30 inches.

Retail price: $13,500

XE Grade

Same features as above with the addition of chiseled scroll work with engraved game scenes and higher quality Circassian walnut.

Retail price: $15,500

DE Grade

Same features as above with more intricate and extensive engraving. Even higher quality wood with diamond pattern checkering.

Retail price: $18,000

FE Grade

This grade features gold inlays and distinctive scroll work. Best quality wood with very fine line diamond pattern checkering.

Retail price: $23,000

Exhibition Grade

This is the company's highest grade and features any optional detail the customer desires including custom engraving and exhibition quality wood.

Retail price: $36,500

FRANCHI, L.

Brescia, Italy

SIDE-BY-SIDE-SHOTGUNS

Astore

A 12 gauge boxlock shotgun manufactured in a variety of barrel lengths with double triggers and automatic ejectors. Blued with a straight walnut stock. Manufactured from 1937 to 1960.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*

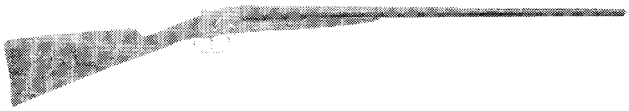
ly produced. No two are alike. These shotguns and rifles should be individually appraised before the sale. Prices listed are subject to fluctuations in international currency.



Custom Side-by-Side Shotguns

Available in 12, 16, 20, 28 gauge and .410 bore in either boxlock or sidelock actions. Barrel length, engraving, wood type and style are at the customer's discretion. Retail prices range from:

Basic Boxlock with 27.5" barrels and walnut stock with double triggers in 12, 16, and 20 gauge without engraving—$15,000

Basic Boxlock in 28 gauge or .410 bore without engraving—$11,000

Basic Boxlock with 26.5" or 28" barrels and deluxe walnut stock with scroll engraving, and double triggers in 12, 16, and 20 gauge—$20,000

Basic Boxlock in 28 gauge or .410 bore—$25,000

Prices for 24 and 32 gauge are extra. These prices do not include engraving.

Custom Double Rifles

These custom built double rifles are offered in calibers from 9.3x74R to .470 Nitro Express in boxlock or sidelock actions. Barrel length, engraving, wood type and style are at the customer's discretion. Retail prices range from:

Prices for 24 and 32 gauge are extra. These prices do not include engraving.

Boxlock in 9.3x74R, 8x57JRS and other European calibers-$11,800

Boxlock in.375 H&H and.470 NE—$15,700

Sidelock in 9.3x74R, etc.—$23,700. Sidelock in large calibers—$28,500

Custom Single-Shot Mountain Rifles

These single-shot rifles are offered in rimmed cartridges but rimless cartridge rifles can be built on special request. Barrel length, engraving, wood type and style are at the customer's discretion. Retail prices range from Boxlock in rimmed calibers—Prices start at $10,000. Sidelock in 7x65R and 7mm Rem. Mag.—Prices start at $21,000

Custom Bolt-Action Rifles

These bolt-action rifles utilize a Mauser 98 type action with adjustable trigger. They are offered in calibers from .17 Bee to .505 Gibbs. Barrel lengths are 21" to 24.5", engraving wood type and style are at the customers' discretion. Retail prices range from:

Standard bolt-action calibers: .270, .30-06, 7x64, 8x60S and 9.3x62—Prices start at $5,650

Short-action calibers: .222, .223—Prices start at $7,100

Magnum-action calibers: 7mm Rem. Mag., .300 Win. Mag., .338 Win. Mag., .375 H&H, and .458 Win. Mag.—Prices start at $6,400

African calibers: .416 Rigby, .460 Wby., .505 Gibbs—Prices start at $10,250.

NOTE: Please note that the prices listed are for the basic models. They do not reflect the extensive list of options available on these custom firearms.

FRENCH MILITARY FIREARMS

(including copies made in Liege, Belgium)
Charleville, St. Etienne, Chatellrault,
Mutzig and Tulle Armories

Most of these firearms were the products of five major armories, the old Charleville Armory and St. Etienne works, and the newer armories at Chatellrault, Mutzig, and Tulle. The armory of manufacture was invariably inscribed in script upon the lock, usually preceeded by an abbreviation "Manufactire Roy le de" or M re R le de" until 1848, "M re N le de" from 1848 until 1852, and "M re Imp ale de" after 1852, respectively representing, "The Royal Manufactory at ..." "The National Manufactory at ...," and, "The Imperial Manufactory at ..." In addition to these lock markings, the specific model year was usually marked upon the barrel tang, preceded by an "M." If the model had been altered, a "T" (for "transformed") was added after the date, and if subsequently remodeled, the script ("bis" was added after that (for "again"). Date of manufacture usually appears upon the barrel, and also within the pressed circle surrounding the "touch mark" on the right side of the buttstock. Numerous inspection marks also appear on the metal parts of the gun.

The arms manufactured for the French military were widely copied in Europe's major firearms center, Liege, Belgium. The Liege gun trade, however, was based on the "factory" system. Each specialist, working out of his own cottage, manufactured

one type of part on subcontract and delivered it to an assembler. Many of the final assemblers in Liege did not mark their products or did so only with crowned initials. Those that did usually marked their "products" upon the lockplates. Among the better known Liege assemblers' marks during the middle of the 19th century were ANCION & CIE/A LIEGE, A F (A. Francofte), B F (Beuret Freres), C D (probably for Charles Dandoy), D (anchor) C (probably Dejerdine & Co., Demousse & Co., or DeFooz & Co.), D L (DeLoneux) C. DANDOY/A LIEGE, A. & CH DE LONEUX DRISKET & WAROUX, G M (Gulikers Marquinay), V. GULIKERS/A LIEGE, J L (Joseph LeMille), L (anchor) C or L. LAMBIN & CIE/LIEGE, LE MILLE/A LIEGE, P.J. MALHEREBE & CIE/LIEGE, E. MUNSEUR/LIEGE, J.A. PETRY/A LIEGE, G. SCHOPEN/A LEIGE, TANNER & CIE., T. TILKEN/A/LIEGE, AND V P (Vivario- Plombeur). It should be noted, however, that these makers produced not only copies of French arms, but also accepted contracts for arms from other European powers, notably Russia, Spain, the Piedmont, Saxony, and England. Whether marked on the lock or not, all Liege barrels were required to pass a proof of strength, and having done so were marked near their breech with a small tower and the Liege black powder proof, an oval encompassing the letters "E/LG/"(star). The main French firearms produced or copied during the muzzleloading era were:

French M1816 Flintlock Musket (for Infantry/Light Infantry)

Overall length 58-1/8" to 56"; barrel length 42-7/8" to 40-1/2"; caliber .69 This musket is basically the French M1777 musket with minor improvements. Although the French did not subsequently alter this model to percussion, the Kingdom of Wurtemberg obtained several thousand from the Charleville Armory, which were altered to percussion and then rifled and sighted after their own models of 1842 and 1855, the barrel receiving a long-range French-style rear sight after rifling. As many as 2,000 of these may have been imported into the United States in 1862 by Marcellus Hartley.

In flintlock

Altered to percussion, rifled and sighted

Exc.	V.G.	Good	Fair	Poor
—	—	1150	400	275

French M1822 Flintlock Musket (for Infantry/Light Infantry)

Overall length 58" to 55-7/8"; barrel length 42-5/8" to 40-5/8" (40-5/8" for both types if "T bis"); caliber .69 (.71 for rifled versions). The French M1822 musket in either full infantry length or the shorter version for light infantry (voltiguers), set the pattern for most of the muskets subsequently adopted by the European powers during the second quarter of the 19th Century.

In the 1840s many were "transformed," i.e. altered to percussion by adding a convex bolster to the upper right side of the barrel near the breech for a cone and replacing the flintlock battery with a percussion hammer. With the adoption of the Minie ball projectile, it was determined to further upgrade these arms; however, because a new caliber had been adopted, the old barrels were deemed too thin to both enlarge and rifle. Accordingly new barrels were made in .71 caliber. The percussioned version was copied in Liege (by Ancion, Francotte, and Falise & Trapmann) for the Kingdom of Piedmont as its M1844 musket and M1860 rifle musket. These are distinguished by the enlarged tip of the hammer spur, a peculiar rear sight added to the breech and tang, and Liege markings.

In flintlock

—	—	1150	400	275

French M1822 Cavalry Flintlock Pistol (and "T bis")

Overall length 13-1/4"; barrel length 7-7/8"; caliber .69 (.71 in "T bis"). The M1822 cavalry or horse pistol served as the secondary arm of the French mounted forces, with a pair assigned to each horseman to be kept in saddle holsters astride the pommel of the saddle. Like the M1822 muskets, these were altered ("transformed") to percussion after 1842 in the same manner as the muskets. In 1860, the ordnance department decided to rifle them as well ("transformed again"—hence "Tbis") but this required a new barrel since the adoption of the new caliber (.71) precluded rifling the thin old barrels.

French M1822 Cavalry and Lancer Flintlock Musketoons (and "T")

Overall length 34-5/8"; barrel length 19-5/8"; caliber .69. The main difference between the carbines carried by the cavalry and that of the lancers was the manner of slinging, with the latter having sling rings attached to the upper band and to a projection set into the buttstock. The ramrod was carried separately, consequently there was no inletting of the forestock. After 1842, both types were altered to percussion in the same manner as the M1822 muskets and pistols.

French M1829 Artillery Flintlock Carbine (and "T bis")

Overall length 37-1/4" to 38-1/4" (for "T bis"); barrel length 23-5/8"; caliber .69/.71 (for "T bis"). The carbine for artillerists was similar in configuration to that for the cavalry and lancers, differing primarily in having a ramrod in a channel below the barrel. After 1841, these arms were altered to percussion and after 1846 a bayonet lug with long guide was added to the right side of the barrel to accommodate the French M1847 yatagan saber bayonet. At the same time, a number of these arms were sighted, rifled, and a "tige" (a metal column or pillar) was inserted into the breech of the bore that permitted the arm to fire the Thouvenin projectile. After 1857 new barrels were manufactured that permitted the introduction of the standard Minie projectile of .71 caliber.

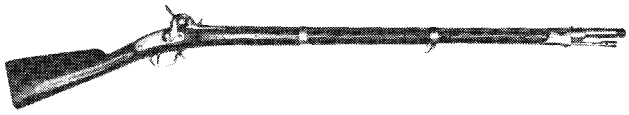
French M1837 Rifle ("Carbine a la Poncharra")

Overall length 51-5/8"; barrel length 34-1/4"; caliber .69. The first of the French percussion arms for the general services, the M1837 rifle was designed on the Poncharra system. In this system, a chamber of lesser diameter than the bore was affixed to the barrel. A projectile of the diameter across the lands and its "sabot" was rammed into the barrel, and upon striking the lip of the chamber theoretically expanded into the rifling.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	2250	950	450

French M1840 Rifle ("Carbine de Munition")

Overall length 48-1/8"; barrel 32-5/8"; caliber .71. After the success of the M1837 carbine, the rifle went into production at the armories at Mutzig and Chatellrault as the M1840 "carbine Tiery" or "carbine de munition." It was modified in 1842. The design was modified by adding a projection to the lower end of the buttplate. Herman Boker of New York City imported 25,000 of the M1840 rifles in 1862, but the slow twist of the rifling caused them to be classified as "4th class" weapons and none were issued.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	600	300

French M1840 and M1842 Percussion Muskets (Infantry/Light Infantry)

Overall length 58-1/4" to 55-1/4"; barrel length 42-5/8" to 40-1/2"; caliber .71. The M1840 and M1842 muskets were the first percussion arms adopted for general infantry service in the French army, both being distinguished by employing back action percussion locks. The M1840 was distinguished from the M1842 by having a screwed in "patent" breech integrating the bolster, while the bolster of the M1842 musket was forged integral to the barrel, both flush with the right side of the barrel. The M1842 musket was later "transformed" to the M1842T by rifling the barrel with four broad grooves. The Belgian gun trade copied the M1842T both with and without the block rear sight that stood on the breechplug tang.

Exc.	V.G.	Good	Fair	Poor
—	—	1150	500	275

French M1853 Musket, M1853 "T" and M1857 Rifle-Muskets

Overall length 58-1/8" (M1853 infantry musket only) to 55-1/4"; barrels 42-5/8" (M1853 only) to 40-1/2"; caliber .71. In 1853, the M1842 series of arms was modified slightly, the most visible difference being the right face of the bolster, which stands away from the right side of the barrel. After the adoption of the "Minie ball" as the main projectile of the French army, the new M1857 rifle musket was introduced. It was essentially the same as the M1853 "T" light infantry musket but its bore was rifled with four broad grooves. Subsequent to the adoption of the M1857 rifle musket the M1853 muskets were "transformed," the light infantry muskets simply by rifling them, and the infantry muskets by shortening them to 55-1/4" with 40-1/2" barrels and rifling them. Both types were widely copied by the Belgian gun trade, who exported thousands to the United States in 1861, many with French style long range sights affixed to the barrels.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	1150	500	300

French M1846 and M1853 Rifles ("Carbine a tige")

Overall length 49-1/4"; barrel length 34-1/4"; caliber .71. In 1846 the French abandoned the Delvigne chamber rifles in favor of a different method of compressing the projectile into the rifling, that of M. Thouvenin. In Thouvenin's system, the chamber with a lip was replaced with a metal column or pillar "a tige" extending from the breechplug into the bore. After the powder settled around the "tige" the bullet was rammed into the bore and compressed against the tige to expand it into the rifling. The rifle adopted in 1853 differed from the original model adopted in 1846 only in the bolster configuration, the latter extending away from the right side of the barrel. At least a thousand Belgian made "carbines a tige" were imported into the Confederacy in 1861. Accordingly, Belgian "tige" rifles with proven Southern usage should command a premium over those without such history.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	600	350

French M1853 "T" and M1859 Rifles ("Carbine de Vincennes")

Overall length 49-1/4"; barrel length 34-1/4"; caliber .71. With the adoption of the self expanding "Minie ball" in 1857, the French ordnance soon adopted a rifle which was suitable for it, the M1859 "carbine de Vincennes." Beginning in 1860, the M1853 "tige" rifles were "transformed" by the removal of the pillars from the breechplugs and fitting them with the rear sight leaves of the M1859 rifle. The M1853 "T" and M1859 French rifle was widely copied in Liege, and thousands were exported to the United States during the American Civil War, while most of the French made M1859 rifles reposed in French arsenals. Like the M1840 and M1846 and M1853 rifles, the M1859 rifle took a long yatagan blade saber bayonet that was affixed to a lug with a guide on the right side of the barrel.

FUNK, CHRISTOPH

Suhl, Germany

Christoph Funk began his gun business before 1900. The vast majority of long guns were best quality. Some collectors believe that J.P. Sauer built receivers for Funk but this is not known for certain. Funk produced shotguns, shotgun-rifle combinations, and double rifles. Some were exported to England and the U.S. Most of the U.S. imports are in the more common North American calibers such as .300 Savage, 30-30, 32-20 Winchester, and 12 or 16 gauge. Most are found with only a right-hand extension arm which locks into the receiver, but some higher grades have both extension arms. The quality of these guns is extremely high. Guns were probably not made after 1940. Quality of engraving and caliber determines value. American calibers will command a higher price. Prices listed are for American calibers.

FURR ARMS

Prescott, Arizona
J. & G. Sale, Inc.
Prescott, Arizona

In addition to producing reproductions of various cannon, this company also manufactured one-tenth to three-quarter scale reproductions of Gatling guns. Furr products are highly desirable in some circles, with the Gatling .22 reproductions typically commanding prices in excess of $18,000 in mint, unfired condition.

FYRBERG, ANDREW

Worcester and Hopkinton, Massachusetts

Double-Barrel Shotguns

Fyrberg did work for Iver Johnson and C.S. Shattuck Co. of Hatfield, Mass. He began producing a hammerless double about 1902, a well designed boxlock with coil mainsprings. An estimated 2,000 were produced at Hopkinton and Worcester, Mass. Some have been made at Meriden, Conn. Sears cataloged the Fyrberg guns in 1902 to about 1908.

GABBET-FAIRFAX, H.

Birmingham, England

Mars

Designed by Hugh Gabbet-Fairfax, this semi-automatic pistol was first produced on an experimental basis by Webley & Scott Revolvers in the 1890s. After Webley gave up on the idea an extremely limited number were built by the Mars Automatic Pistol Syndicate, Ltd., 1897 to 1905. The pistol was produced in four calibers; the 8.5mm Mars, 9mm Mars, .45 Mars Short Case, and .45 Mars Long Case. This was the most powerful handgun cartridge of its time and remained so until well after World War II. It is estimated that only about 80 of these pistols were ever produced.

GABILONDO Y CIA

SEE—Llama

GABILONDO Y URRESTI

Guernica, Spain
Elgoibar, Spain
SEE—Llama

This Spanish firm was founded in 1904 to produce inexpensive revolvers of the Velo-Dog type. Sometime around 1909 the firm began to manufacture the Radium revolver. In 1914 the company produced a semi-automatic pistol distributed as the Ruby. This pistol soon became the mainstay of the company with orders of 30,000 pistols a month for the French army. With the end of WWI Gabilondo Y Urresti moved to Elgoeibar, Spain. The company produced a Browning 1910 replica pistol until the early 1930s. It was at this point that Gabilondo began to manufacture a Colt Model 1911 copy that became known as the Llama. For information of specific Llama models see the Llama section. The pistols listed reflect the pre-Llama period and are so marked with the trade name of that particular model. The monogram "GC" frequently appears on the grips but not on the slide.

Velo-Dog Revolver

A 6.35mm double-action revolver with a 1.5" barrel, folding trigger and concealed hammer. Blued with walnut grips. Manufactured from 1904 to 1914.

NIB	Exc.	V.G.	Good	Fair	Poor
1250	900	700	500	400	250

DAYTONA SERIES

This is a competition shotgun, first introduced into the US in 1986 as the Type I. The Type I was available in different configurations with the base model selling for about $4,000 until 1991. In 1994 Gamba introduced the Daytona in a wide variety of configurations and grades under a new designation called the Type II. The primary difference was in the location of the stock bolt. Only about 80 Daytona Type II shotguns are allocated to the US per year. They are a high quality shotgun with an excellent reputation. Prices are listed for 12 gauge guns. 20 gauge guns are available on special request.

Daytona Trap
Offered in 12 gauge with 30" or 32" barrels. Select walnut stock with hand checkering. Removable trigger group, improved Boss lock-up, and boxlock receiver.

NIB	Exc.	V.G.	Good	Fair	Poor

GATLING ARMS CO.

Birmingham, England

Established in 1888, this company remained in operation until approximately 1890. Although primarily involved with the marketing of Gatling Guns, it did market the one revolver listed.

Kynoch-Dimancea

A .38 or .45 caliber double-action hammerless revolver with a 6-shot cylinder. The loading system is rather unusual—a spur that resembles a hammer is pulled down, allowing the barrel and cylinder to pivot and to be pulled forward. During this motion the empty cases are ejected and new ones could be inserted. Marked "The Gatling Arms and Ammunition Co. Birmingham"; some are also marked "Dimancea Patent."

GENEZ, A. G.
New York, New York

Located at 9 Chambers Street, Genez made a wide variety of firearms during his working life (ca. 1850 to 1875). The most commonly encountered of his arms today are single-shot percussion pistols and percussion double-barrel shotguns. More rarely seen are single-shot percussion target rifles. A number of the arms he made were decorated by Louis D. Nimschke. Genez products signed by Nimschke command considerable premiums over the values for the standard firearms listed.

Double-Barrel Shotgun

Most often encountered in 12 gauge with varying barrel lengths; blued steel furniture, and walnut stock.

GEORGIA ARMORY
Milledgeville, George

Established in 1862, this concern produced a rifle based upon the U.S. Model 1855 Harper's Ferry Rifle. Nearly identical in all respects to the Harpers Ferry, the Georgia Armory rifle had a lockplate patterned after the U.S. Model 1841 Rifle. Lock

marked "G.A. ARMORY" over the date (1862 or 1863). Buttplate tangs marked with serial numbers. The highest known serial number is 309. These rifles were fitted with saber bayonets. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition.

GILLAM & MILLER

High Point, North Carolina

Established in 1862, this firm produced two types of rifles, one for the State of North Carolina and one for the Confederate Government. Six hundred and seventy six (676) were accepted by North Carolina in 1863. These arms had an overall length of 48-3/4"; barrel length 33" in .577 caliber. These rifles marked in comb of stock "GILLAM &/MILLER." Confederate contract rifles of the U.S. Model 1841 Pattern were made in .577 caliber in the same style as the state contract rifles. However, their lockplates have a pointed tail. Serial numbered inside of the lockplate. Number made in excess of 125.

GILLESPIE

New York, New York

Derringer Type Pocket Pistol

A .41 caliber single-shot percussion pistol with a 2.5" barrel and a walnut stock. Manufactured from 1848 to 1870.

GREAT WESTERN ARMS COMPANY

During the 10 years that Great Western was in business the quality of its firearms was inconsistent due to uncertain management and finances. This left the company's reputation damaged and allowed Colt and Ruger to dominate the single-action market. By 1961 Great Western Arms Company was no longer able to compete. Despite, or perhaps because of, the company's unstable history there is considerable collector interest in these firearms. Approximately 22,000 single-action revolvers were built and fewer than 3,500 derringers were manufactured from 1953 to 1961.

Standard barrel lengths were: 4-3/4, 5-1/2, and 7-1/2 inches.

Standard calibers were: .38 Special, .357 Magnum, .357 Atomic, .44 Special, .44-40, .44 Magnum, .45 Long Colt, and .22 Long Rifle.

Standard finishes were: Case hardened frame and blued barrel and cylinder, or all blue finish.

NOTE: For guns to be in NIB condition they must have original boxes and paper work. Factory engraved guns must be supported by some type of invoice, letter, or other provenance to realize full value. Great Westerns were also available in kit form. Assembled kit guns are not as valuable as factory-built guns.

NOTE: The market for Great Western factory-built guns is extremely volatile because of their increasing scarcity and historical significance. NIB examples and scarce chamberings command values in excess of those given below.

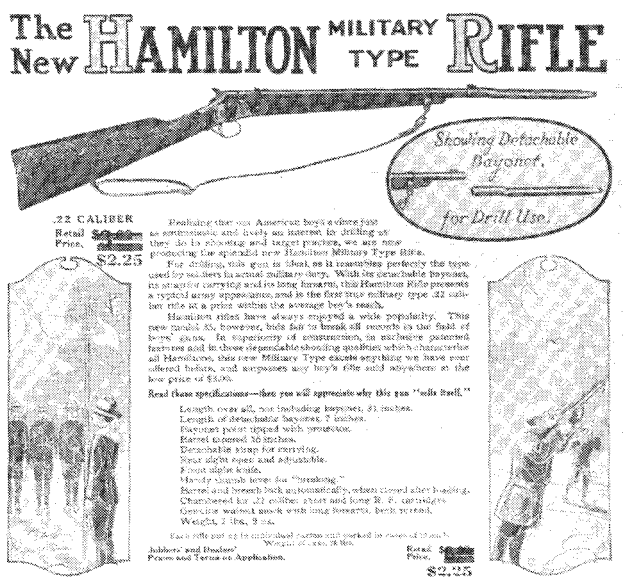
HAMILTON RIFLE COMPANY

Plymouth, Michigan

Manufacturer of inexpensive .22 caliber rifles established by Clarence J. Hamilton and his son Coello. The company was established in 1898 in Plymouth, Michigan. The company ceased production in 1945. Over 1 million rifles were produced between 1900 and 1911.

NOTE: Despite the fact that there were many Hamilton rifles sold, most of these little guns were used hard and many did not survive. Hamilton rifles in excellent condition are hardly ever encountered. No prices are quoted for rifles in this condition as few exist. Further information about these rifles is gratefully accepted by the editor.



Model 7

The first rifle produced by the company, it was made entirely of castings and stampings. It was nickel plated. Chambered for the .22 Short cartridge with an 8" brass-lined barrel that pivots for loading. The stock was a metal skeleton. Production ceased in 1901 with a total of 44,000 rifles produced.

Hamilton Model 7 Courtesy William F. Krause

Exc.	V.G.	Good	Fair	Poor
—	400	250	200	150

Model 11

Similar to the Model 7 but fitted with a board-like walnut stock. There are markings stamped into the buttstock: HAMILTON RIFLES CO., PLYMOUTH, MICH., PAT. PENDING NO.11. The Model 11 was produced from 1900 to 1902 and approximately 22,000 were sold.

Exc.	V.G.	Good	Fair	Poor
—	475	300	200	150

Model 15

Produced from 1901 to 1910 the Model 15 was chambered for the .22 Short with an 8" brass lined barrel. Walnut stock. The design was an under lever single-shot with the loading port under the barrel. The cocking knob is located at the rear of the frame. Blued finish. Approximately 234,000 of these rifles were sold.

Exc.	V.G.	Good	Fair	Poor
—	400	200	150	100

Model 19

This is similar to the Model 15 with a modified loading port and a 12" barrel. A few Model 19s have been seen with 13" barrels. these will bring a premium. Produced from 1903 to 1910 there were about 59,000 of these models sold.

Exc.	V.G.	Good	Fair	Poor
—	475	300	200	150

Model 23

This was the first bolt-action rifle made by the company. The receiver is a steel tube with a loading port in the top where the barrel joins the receiver. The bolt handle is located at the extreme rear of the bolt. The cocking knob must be operated manually. Walnut stock either rounded or flat. Chamber for the .22 Short and .22 Long cartridges. 15" brass lined barrel. Blued finish. Weighs about 3 lbs. Produced from 1905 to 1909. About 25,000 guns were sold.

Exc.	V.G.	Good	Fair	Poor
—	475	300	200	150

Model 27

Single-shot tip-up .22 caliber rifle with stamped steel receiver. Barrel length 16" brass lined or 14-7/8"; overall length 30". First produced in 1906.

Exc.	V.G.	Good	Fair	Poor
—	300	200	150	100

Model 027

As above with a walnut stock. First produced in 1908.

THE QUINTESSENTIAL BOY'S RIFLE: HAMILTON'S MODEL 27

BY TOM CACECI

The all-American boy's best friend, the Hamilton Model 27.

Responsibility, personal discipline, and self-reliance: all these are "manly virtues," character traits the importance of which was fixed in the national psyche by the collective American experience of Colonial times, the Civil War, and westward expansion. That collective national experience also fostered a belief in marksmanship and skill at arms as ideal ways to develop and encourage these personal virtues. It was common wisdom throughout the nineteenth century — and most of the twentieth —that providing a boy with a firearm and instruction in how to use it was a normal, in many ways an *essential*, part of training him to be a responsible adult.

By the late nineteenth century, the American firearms industry had seized on this universally accepted notion to develop the special product that today we call "boy's rifles." Between roughly 1880 and 1950 this category of guns represented a significant part of the overall market: Savage, Stevens, Remington, Winchester, and others made excellent boy's rifles whose only drawback was their relatively high price. But by far, the largest manufacturer serving this niche market wasn't one of the "big names," it was an innovative firm whose designs used state-of-the-art manufacturing techniques to produce safe, reliable boy's rifles at the lowest possible price: the C. J. Hamilton & Son Rifle Company.

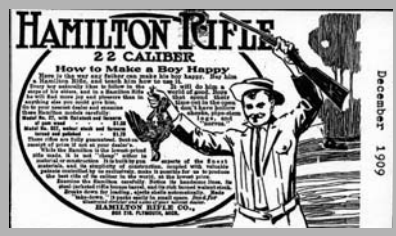
Clarence J. Hamilton and his son Coello weren't gunsmiths in the traditional sense. Their principal business experience was as manufacturers of sheet-metal products, especially iron-bladed agricultural windmills. They applied their technical knowledge of metal-forming to reduce the costs of making small-caliber rifles, enabling them to enter the field with a competitive edge over companies using traditional methods. They were very successful in this strategy: no one really knows how many Hamilton rifles were made during the firm's existence, but just one, the Model 27, is known to have been made in numbers well over half a million. Coupled with the large numbers of less-common Hamilton products, the company's total output of boy's rifles was simply staggering, far greater than any of the large firms. Though it wasn't the first or last boy's rifle, the Hamilton Model 27 has today emerged as the archetype of the class, not least because so many of them are still in existence, despite the hard usage such guns usually received from their young owners.

The Model 27 was introduced in 1907 and production ceased in 1930. It combined major innovations for which the Hamilton Company held patents. The first was the method of making the barrel: by pressure-forming a sheet of metal into a short, thick tube, and then rolling it around a mandrel engraved with a reverse pattern of the rifling. This process was covered under Patent Number 660,725 of October 30, 1900. The Hamilton method was fast and well suited to mass production: more importantly, it was far less expensive than the conventional methods of "quality" gunmakers. Despite its speed and low cost, the technique produced barrels that were perfectly acceptable for low-powered .22 rimfire ammunition.

Although Hamilton's patent covered drawn-over-mandrel barrels made from a variety of materials, by far the greatest number of Model 27s had barrels of brass. The barrel was enclosed in a folded-steel sheet metal jacket that incorporated the sights and the pivot for the break-open action.

Most "quality" rifles of the day used forged and machined receivers. Again, the Hamiltons took advantage of their metal-forming expertise to design a two-piece receiver made of sheet metal whose components interlocked and enclosed the simple and reliable lockwork. This design was covered by Patent Number 863,171 of August 13, 1907, and both patent numbers and dates usually appear on the receiver of the Model 27. A very few early guns bear the words "Patent Applied For."

With a couple of pieces of machine-cut wood for a stock and forearm, a spring, and a few standard screws and pins as the remaining parts, Hamilton 27's could be produced so cheaply that they sold at retail for under $3.00 for most of their production life. Most were sold for far less. In fact, they were often given away as purchase premiums to farmers who bought Hamilton windmills; and the Model 27 was wholesaled in huge numbers to firms recruiting youngsters to sell salve, seeds, and other products door-to-door. Winning a rifle as a prize was a strong motivation for young entrepreneurs!



A 1909 advertisement for the Hamilton Model 27.

Mindful that there are always a few customers who have an extra dollar to spare and demand the "best," Hamilton obliged by producing the Model 027, nearly identical in all respects to the humble Model 27 but featuring a slightly higher grade of wood in the stock and forearm. Some Model 27's have a plain butt with no buttplate, but some have a sheet metal buttplate tacked in place.

The Model 27 was, in short, the perfect product of its type and for its time. It incorporated innovative design, fast mass production, good quality control, and savvy marketing to serve the public's need for a safe, reliable, and practical gun for young boys learning to be men.

Hamilton advertised heavily, especially in the numerous youth magazines of the era, emphasizing the "manly virtues" to be gained from gun ownership, illustrating the copy with images of exuberant boys using their rifles to hunt for the table and training to defend their nation in times of peril. Millions of squirrels, rabbits, vermin and empty tin cans met their end from the business end of a Model 27, wielded by a young hunter who envisioned himself as a latter-day Buffalo Bill, clearing the plains of bison and "red savages" or a young doughboy fighting the bestial Hun and Making The World Safe For Democracy.

A rifle designed to be inexpensive has to be simple in order to be reliable, and the Model 27 is a wonderful example of simplicity of design, in which every component is functional, as "no frills" as any mechanical object can get. The tip-up action, locked by a rotating drum, has only five moving parts: the locking bolt, trigger, hammer, firing pin and extractor. Mastering its use was the work of a few seconds for any boy, something that isn't always true of modern products catering to the youth market.

Despite its simple and practical design, the Model 27 has a good deal of visual appeal as well, thanks to its graceful lines and diminutive size. This is perhaps one reason why it was made for so long and sold so well, compared to other Hamilton products. When Hamilton closed up shop after World War Two, their chief gunsmith bought the company's tooling and briefly made some on his own; and a *Japanese* copy of the Model 027 was retailed for a very short time in 1965 by a California import firm. The few Japanese copies sold poorly because the action, too weak for modern ammunition, was regarded as unsafe.

Barrel lengths on Model 27s vary from just under 15 inches to 16 inches. For many years the Model 27 came under the provisions of the National Firearms Act of 1934 as a "short barreled rifle," but present day collectors can heave a sigh of relief: in a burst of good sense, the BATFE eventually decided that the Model 27 does not, after all, represent much of a threat to the peace and stability of the American Republic. All Hamilton 27s have long since been exempted from the NFA. And of course all qualify as "Curio & Relic" guns by virtue of age.

Boy's rifles by their nature led a very hard life, and it's testimony to the quality of Hamilton's design and production team that so many Model 27s still exist, though most of them are pretty beaten up today, worn out and fit only for displays. Very few will have all original parts. The very simple nature of the design encouraged boys to act as their own "gunsmiths" and it's normal to encounter Model 27s with hardware-store screws and bolts to replace lost or worn-out ones.

The action is not the most robust design, and after tens of thousands of rounds the barrel pivot and locking block inevitably wear to the point where headspace increases and the gun becomes unsafe. (As a youth I was foolish enough to shoot high-speed Long Rifles in a typically worn Model 27, and dumb enough not to think about why the rims were blowing out! Yes, I still have two functional eyes, don't ask me why.)

The brass barrels, used with corrosive ammunition (often loaded with black powder as well) are almost always shot out. If there is rifling visible at all, the barrel is in better shape than average. Many of the barrels will be cracked where corrosion has eaten through the seam left when the barrel was formed around its mandrel. Cracked barrels are unsafe and relegate the rifle to wall-hanger status. The Model 27 was designed to shoot .22 Shorts and Longs, but that's with the relatively low-powered varieties of the time, <u>not</u> what's on the market now. I would not fire *any* Hamilton today, no matter how good its condition, with *any* variety of modern Long Rifle ammunition, even standard velocity rounds; and I'd assiduously avoid high-speed Shorts. A Model 27 that's tight and in good condition can be safely fired with CB or BB caps, or the Aguila "Kolibri" cartridges, but on the whole it's better not to shoot one at all.

Words to quicken the collector's heart.

The Hamilton Model 27 is an icon of an era in American life that is, alas, gone forever. Though most boy's rifles are still reasonably affordable, their inherent collectors' interest and the "nostalgia factor" have been driving prices steadily upwards. Prices for Model 27s have been strong for the past couple of years and have risen significantly for really good examples. A complete and original one in Good condition will bring $200-300; a really pristine one half again or even twice that (if such a thing even exists outside a museum). As with any other collectible firearm, condition is the main determinant of price: the more original parts that have been replaced, the less it's worth.

Model 35 or Boys' Military Rifle

Single-shot .22 caliber rifle with a full-length oval walnut straight-grip stock and 15-3/4" brass lined barrel. Produced from 1915 to 1918. Sold with a stamped steel bayonet. Few bayonets survive.

Exc.	V.G.	Good	Fair	Poor
—	400	250	150	100

NOTE: Add $100 for bayonet to above prices.

Model 39

This was the only repeating rifle built by the company. It is a hammerless slide-action design with a tubular magazine. Magazine capacity is 15 rounds of .22 Short. Barrel length is 16" with brass liner. Walnut stock with blade front sight. Produced from 1922 to 1930. Weighs about 4 lbs.

Exc.	V.G.	Good	Fair	Poor
—	300	200	150	100

Model 43

This is a bolt-action design with the loading port on the top of the barrel. There is no external cocking knob but the bolt is pulled to the rear when in the locked position. Chambered for the .22 Short and .22 Long cartridges. 15.75" brass lined barrel. Fitted with an oval walnut stock with blade front sight and open non-adjustable rear sight. Weighs about 3 lbs. Built from 1924 to 1932.

Exc.	V.G.	Good	Fair	Poor
—	300	200	150	100

Model 47

This is a bolt-action single-shot rifle with the loading port located on top of the barrel. It was chambered for the .22 Short and Long cartridges. The cocking knob is located at the rear of the bolt handle. Early Model 47 were built with 16" brass lined barrels. Later examples were fitted with 18.25" steel lined barrels. Early guns had an oval buttstock while later guns had a pistol grip stock. Very late guns had an all-steel barrel. Produced from 1927 to 1932.

Exc.	V.G.	Good	Fair	Poor
—	475	300	200	150

Model 51

This was a conventional type bolt-action rifle with the cocking knob located at the rear of the bolt. Two styles of buttstocks were used: a flat style or later an oval shape. This was the first Hamilton rifle chambered for the .22 LR cartridge. Barrel was 20" steel. Finish was blue. Weight was approximately 3.5 lbs. Produced from 1935 to 1941.

Exc.	V.G.	Good	Fair	Poor
—	400	250	200	150

Model 55

This bolt-action rifle was chambered for the .22 Short, Long, and LR cartridges. Fitted with a 20" steel barrel with bead front sight and open adjustable rear sight. Walnut stock. This is the rarest Hamilton rifle. Only one example is known. Produced from late 1941 to early 1942.

NOTE: No price has yet been established.

HAMMERLI, SA

Lenzburg, Switzerland

RIFLES

Model 45 Smallbore Rifle

A .22 caliber bolt-action single-shot, with a 27.5" heavy barrel, an aperture rear and globe target front sight and a match rifle-type thumbhole stock. Manufactured between 1945 and 1957.

Exc.	V.G.	Good	Fair	Poor

HARPERS FERRY ARMORY MUSKETS AND CARBINES

Harpers Ferry, Virginia

Established at Harpers Ferry, Virginia, in 1798 as the new nation's "Southern Armory," production finally began in 1800 and continued at the "musket works" until the facilities were seized by Virginia state militia in April 1861. With the signing of a contract in 1819 between the government and J.H. Hall, the latter was permitted to construct a separate facility for the production of his patent breechloading rifles, which continued to be known as the "rifle works" after the discontinuation of Hall production until it, too, was seized by Virginia militia in 1861. The machinery of the former was sent to Richmond to be used in the manufacture of the "Richmond rifle musket" while the rifle machinery was sent to Fayetteville, North Carolina, where it was employed in making "Fayetteville rifles."

Harpers Ferry U.S. M1816 Muskets (Types I to III)

Overall length 57-3/4"; barrel length 42"; caliber .69. Markings: on lockplate eagle over "US" forward of cock, "HARPERS/FERRY/(date) on tail. Barrel tang also bears the date, and barrel should show proofmarks on upper left side near breech. The 45605 (type 1) muskets produced at Harpers Ferry from 1817 through 1821 were made with a lower sling swivel that was attached to a separate lug extending from the forward strap of the trigger guard. In 1822, this piece was eliminated and the balance of the production (216,116) officially known as the M1822 musket, incorporated the lower sling swivel directly to the trigger guard bow. Until 1832, these muskets were manufactured with a "browned" barrel to inhibit rusting. The brown barrels of these 107,684 muskets distinguish them as Type II production. The balance of production until 1844 (98,432) were made with bright barrel, distinguishing Type III muskets. De-

spite the large numbers produced, most were altered to percussion during the 1850s. Most by the "cone-in-barrel" (so called arsenal) method. Many of these were altered again during the American Civil War, usually with a "Patent Breech," and were then rifled and sighted.

NOTE: Add 100 percent for Type III flintlock muskets (Rare).

Harpers Ferry U.S. M1842 Musket

Overall length 57-3/4"; barrel length 42"; caliber .69. Markings: on lockplate, eagle over "US" forward of hammer, "HARPERS/FERRY/(date)" on tail; barrel tang also shows date; upper left quarter of barrel near breech includes proofmarks (an eagle's head, a "V," and a "P") and inspector's initials. Between 1844 and 1855, Harpers Ferry manufactured 106,629 of these smoothbore muskets, many of which were subsequently rifled and sighted; the latter will bring a slight premium.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3500	1250	400

Harpers Ferry U.S. M1819 Hall Rifle (Types I and II)

Overall length 52-3/4"; barrel (bore) length 32-5/8"; caliber.52. Markings: on top of receiver, either "J.H. HALL/H.FERRY/(date)/U.S." or "J.H. HALL.S./(date)." The 2,000 rifles manufactured between 1824 and 1826 (Type I) are distinguished by having their barrel bands retained by band springs on the right side of the stock. The balance of production (17,680), made between 1828 and 1840, have pins driven through the bands and the stock, distinguishing Type II production. Many of these rifles were altered to percussion just before and in the early months of the American Civil War. Those with evidence of having been altered in the South will command a premium.

NOTE: For Type I flintlocks add 250 percent.

Harpers Ferry U.S. M1841 Hall Rifle

Overall length 52-3/4"; barrel (bore) length 32-5/8"; caliber .52. Markings: on top of receiver, either "J.H. HALL/H.FERRY/US/(date)." With the general adoption of the percussion system of ignition, the manufacture of Hall's rifles was changed to conform to the new system, a cone tapped directly into the breechblock substituting for the frizzen and pan, and a hammer replacing the flint cock. The newly made percussion arms also incorporated the newly adopted "fishtail" latch for levering the breechblock. Two-thirds of the 4,213 rifles made were still in storage at the arsenal when it was burned in 1861, enhancing the rarity of the arm.

Harpers Ferry U.S. M1836 Hall Carbine (Types I & II)

Overall length 43"; barrel (bore) length 23"; caliber .64. Markings: on top of receiver, "J.H. HALL/U.S./(date)." To furnish the newly raised 2nd Regiment U.S. Dragoons raised in 1836, Harpers Ferry Armory was directed to construct 1,003 Hall carbines, differing in length and caliber over the M1833 model produced by the North for the 1st Regiment, but were not ready when the unit was sent to Florida. Another 1,017 were made during 1839-1840 with the addition of a tool compartment in the buttstock, distinguishing type II production.

Harpers Ferry U.S. M1842 Hall Carbine

Overall length 40"; barrel (bore) length 21"; caliber .52. Markings: on top of receiver, "H. FERRY/U S/1842." To meet the needs of the U.S. Dragoons for replacement carbines, Harpers Ferry manufactured 1,001 carbines in 1842, differing only from the North M1840 (Type II—"fishtail lever") carbine by being brass instead of iron mounted.

Harpers Ferry U.S. M1841 Muzzleloading Rifle—The "Mississippi Rifle"

Overall length 49"; barrel length 33"; caliber .54 (altered to .58 after 1857). Markings: on lockplate, eagle over "US" forward of hammer; "HARPERS/FERRY/(date)" on tail; date also on tang of breechplug; inspector's initials "AW/P" or "WW/P" and proofmarks (eagle's head, "V" and "P" on upper left side of barrel). With the discontinuance of production of the Hall patent arms,

Hall's Rifle Works was transformed into the production of the new U.S. rifle adopted in 1841. From 1846 until 1855 a total of 25,296 were manufactured at Harpers Ferry. Approximately 10,000 of these rifles were subsequently adapted for long range firing and to saber bayonets at Harpers Ferry between 1855 and 1861. The adaptations in chronological order included the adoption of the Snell bayonet and Benton long range "screw" sight, the adoption of a saber bayonet lug with guide and the Benton sight, the adoption of the saber bayonet lug with guide and the Burton "ladder" long range sights, the adoption of the U.S. M1855 (Type 1) rifle sights and bayonet lug (first in .54 and then in .58 caliber), and finally the adoption of the U.S. M1855 (Type II) rifle sights and bayonet lug (in .58 caliber). A few thousand were also adapted to the Colt revolving rifle sights and split ring bayonet adaptor in 1861-1862, but that adaptation was not restricted to Harpers Ferry-made rifles.

Harpers Ferry U.S. M1842 Musket

Overall length 57-3/4"; barrel length 42"; caliber .69. Markings: on lockplate, eagle over "US" forward of hammer; "HARPERS/FERRY/(date)" on tail; date also on tang of breechplug; inspector's initials and proofmarks on barrel near breech. Harpers Ferry manufactured a total of 106,629 of these smoothbore muskets between 1844 and 1855. Many of these muskets were subsequently rifled and sighted from 1855 to 1858 or simply rifled during the early years of the American Civil War.

Exc.	V.G.	Good	Fair	Poor
—	—	3850	2000	750

Harpers Ferry U.S. M1855 Rifle-Musket (Type I & II)

Overall length 56"; barrel length 40"; caliber .58. Markings: on lockplate, eagle on Maynard primer door; "US/HARPERS FERRY" forward of hammer; date on tail; date also on top of barrel near breech plus proofmarks (eagle's head, "V," and "P"). Between 1857 and 1858 Harpers Ferry produced 15,071 of these rifles, but many were still unsighted at the end of the fiscal year. This early production (Type I) is distinguished from the later production (1859-1860) by the absence of the iron "patchbox" on the right side of the buttstock, a long range rear sight, and a brass nosecap. The "patchbox" was added in 1859 together with a short base rear sight with leaves graduated to only 300 and 500 yards. The brass nosecaps were gradually phased out during 1859.

—	—	6000	2750	800

Harpers Ferry U.S. M1855 Rifles (Type I & II)

Overall length 49"; barrel length 33"; caliber .58. Markings: on lockplate, eagle on Maynard primer door; "U S/HARPERS FERRY" forward of hammer; date on tail; date also on top of barrel near breech plus proofmarks (eagle's head, "V," and "P"). Designed as the replacement of the U.S. M1841 rifle, production of the U.S. M1855 rifle began at John Hall's old "Harpers Ferry Rifle Works" in 1857. The production of 1857 and 1858 (Type I), numbering only 3,645 rifles, were all brass mounted, bore a long range rear sight on the browned barrel, and bore a "patchbox" inletted for a special crosshair figure "8" detachable front sight, though many were still without their rear sights at the end of the fiscal year due to the intervention of the Secretary of War. Most of these were never issued and were subsequently destroyed when the arsenal was set afire in April 1861 to prevent the capture of its arms by Virginia forces. The 3,771 rifles produced between 1858 and April 1861 (Type II) were all iron mounted (though a transitional period continued to utilize the brass nosecaps), eliminated the special front sight (permitting the cavity to be enlarged for greased patches), and employed a short base long range rear sight similar to that of the Type II M 1855 rifle musket.

Harrington & Richardson®

HARRINGTON & RICHARDSON, INC.

Worcester, Massachusetts

Established in 1877 by G.H. Harrington and W.A. Richardson. The arms originally produced by this company were marketed under the trade name Aetna. The firm is now located in Gardner, Massachusetts. In November 2000 the Marlin Firearms Company purchased the assets of Harrington & Richardson. In 2008 it was announced that H&R/NEF/Marlin had been acquired by Remington Arms, and that H&R's Gardner, Mass., plant would be closed by the end of 2008 and absorbed into Remington's existing production facilities.

Model No. 1

A .32 or .38 caliber spur-trigger single-action revolver with a 3" octagonal barrel, solid frame, a 7-shot or a 5-shot cylinder, depending on the caliber. Nickel-plated with checkered rubber bird's-head grips. Barrel marked "Harrington & Richardson Worcester, Mass." Approximately 3,000 were manufactured in 1877 and 1878.

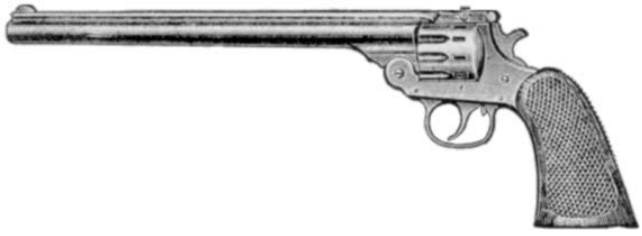
.22 U.S.R.A./Model 195 Single-Shot Match Target Pistol

Also called the Model 195, this pistol underwent nearly constant modifications from its inception in 1928 until production ceased in 1941. Its development was greatly influenced by the United States Revolver Association (USRA), which established certain rules for target pistol shooting. The lack of any H&R-published model chronology for the estimated 3,500

guns manufactured makes model determination by examination complicated; a further difficulty is that H&R supplied newly designed parts to owners of older variations, who would then retrofit their pistols with newer triggers, hammers, sights, and trigger guards. Extracted from the available literature, the parts represent approximately: 14 different stocks and virtually endless custom variations by Walter F. Roper; 5 different trigger guards; 3 different triggers; 2 different hammers; 2 different extractors; 3 barrel lengths (7", 8", 10"); and 3 barrel rib styles. From this array of potential characteristics, at least four distinct variations can be identified.



.22 U.S.R.A./Model 195 Pistol, Variations 1 to 3

500	350	325	275	200

.22 U.S.R.A./Model 195 Pistol, Variation 4

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
550	400	350	325	250

Variation 1, pre-U.S.R.A., 1928-30: Not marked **U.S.R.A.**, and known as the "H&R Single-Shot Pistol." There is no finger rest between the trigger guard and front grip strap; it was advertised with "sawhandle" shape grip copied from the Model 1 or 2 smooth bore H&R Handy-Gun, manufactured with a 10" "hourglass" barrel with a deeply undercut rib. These are the first 500 pistols.

Variation 2, U.S.R.A. Keyhole Barrel, 1930-31: This is the standard "early" model marked **U.S.R.A.**, has a finger rest, and non-sawhandle grips; however, several grip shapes were offered as options. The grip screw goes from rear of grip into threaded hold in back grip strap.

Variation 3, Modified Keyhole Barrel, 1931: Modification of Variation 2 to improve rear sight, barrel catch changed, reduced spent cartridge force by replacing cylindrical extractor with less powerful hinged type, and the hammer cocking spur and finger rest were made wider. The 8" barrel was offered as an option to standard 10" length, and the number of different grip shapes was increased. This is a transition model between "early" Variation 2 and "final" Variation 4 designs.

Variation 4, Tapered Slabside Barrel, 1931-41: New "truncated teardrop" barrel cross section shape; new standard barrel length of 7", with 10" optional; adjustable trigger; new sear; grip screw location was changed to front of grip; and front sight was adjustable for elevation. The trigger design was changed from curved to straight beveled type with relocated cocking surfaces, and the number of grip shapes increased further to 13 types. A front sight protector was supplied as standard equipment, and luggage style case offered as an option. It appears that Variation 4 was introduced around 1931; the 1932 advertisements describe the fully redesigned gun, but picture Variation 2, indicating H&R probably did not re-photograph the new design. The final variation has a special, tight bore .217" in diameter, with bullet seating .03125" (1/32") into rifling, and is among the most accurate of single-shot .22 caliber pistols. The Model 195/U.S.R.A. was relatively expensive, costing approximately $30 in 1932, and increased to slightly more than $36 by the time production ended in 1941, yet was the least expensive of all single-shot .22 target pistols of quality.

Model 504

A .32 H&R Magnum caliber double-action, swing-out cylinder revolver with a 4" or 6" heavy barrel, adjustable sights, and 5-shot cylinder. Blued, with either black plastic or walnut grips. Smaller version manufactured with a 3" or 4" barrel and a round butt.

Single-Barrel Shotguns

Harrington & Richardson manufactured a series of single-barrel, break-open shotguns between 1908 and 1942. They were chambered for various gauges and had various barrel lengths and chokes. The finishes were blued with walnut stocks. There is little collector interest in these guns and, if in sound condition, are desirable as shooters only. They are the Models 3, 5, 6, 7, 8, and 9, as well as a hinged-frame, folding design.

Exc.	V.G.	Good	Fair	Poor
125	100	85	65	40

Turkey Mag

A single-shot break-open side release gun chambered for the 12 gauge 3-1/2" shell with screw-in Full choke. The hardwood stock has a Mossy Oak finish. Barrel length is 24" with a bead front sight. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
175	150	125	100	75	50

Youth Turkey Gun

Similar in appearance to the Turkey Mag. but on a smaller scale. Chambered for the 20 gauge 3" shell with 22" barrel. Weighs about 5.5 lbs.

H&R Handy-Gun (rifled barrel) CURIO OR RELIC

Rifled-barrel H&R Handy-Guns were manufactured about 1930-34, but details of their production are not well documented. In H&R catalogue #19 (copyright 1931) and #20, the .22 and .32-20 are listed as available with blued frame only, 12.25" barrel, with an optional ($1.50) detachable shoulder stock. Whether the .22 W.R.F. version listed on page 83 of the 1932 ***Stoeger's Bible*** was manufactured is unknown. Guns that were originally factory fitted for the shoulder stock (all are extremely rare) have **H.&R. ARMS COMPANY/WORCESTER, MASS.U.S.A./PAT.PENDING** stamped on the bottom of the grip in .125" letters. Production of the rifled-barrel H&R Handy-Gun was halted in 1934 when the Treasury Department classified it as a "firearm" under the NFA, because it was available with a shoulder stock. Any rifled-barrel H&R Handy-Gun is (and always was) exempt from the NFA, if not accompanied by a shoulder stock.

.32-20 W.C.F. serial range mostly from 43851 (?) to 43937 (?)

Exc.	V.G.	Good	Fair	Poor
1400	900	800	700	600

.22 rimfire serial range from 1 (?) to 223 (?)

Exc.	V.G.	Good	Fair	Poor
1200	900	750	650	500

H&R Handy-Gun (smooth bore) NFA, CURIO OR RELIC

The .410 bore or 28 gauge H&R Handy-Gun is a single-shot pistol with an 8" or 12.25" smooth bore barrel, made from 1921 to 1934 by the Harrington & Richardson Arms Co., Worcester, Massachusetts. It shares internal parts with H&R's Model 1915 (No. 5) shotgun, but the Handy-Gun's shorter receiver is designed for a pistol grip, its barrels won't fit the No. 5, and these firearms are serial numbered separately. About 54,000 H&R Handy-Guns were manufactured, nearly all for 2.5" shells. Production was halted after the government ruled the H&R Handy-Gun to be a "firearm" in the "any other weapon" category under the NFA, when its retail price was about $16. An H&R Handy-Gun with an 18" smooth bore barrel is subject to the NFA, but exempt if accompanied by an original (detachable) wire shoulder stock.

.410 bore, Model 2, Types II and III

Exc.	V.G.	Good	Fair	Poor
500	375	300	250	175

28 gauge, Model 2, Type I

Exc.	V.G.	Good	Fair	Poor
1200	900	700	650	500

NOTE: Rare variations command premiums: 8" barrel, 25 to 50 percent; 18" barrel (rarest), 200 to 300 percent; unchoked .410, 20 to 30 percent; 28 gauge or Model 3 (only) with factory-equipped original detachable shoulder stock, 150 percent or more; holster, $75 to $200; serial matching box, $100 to $200 or more (i.e., a box for an 8" barrel 28 gauge could be quite expensive).

H&R manufactured "private-branded" or "trade-branded" H&R Handy-Guns for other distributors. One variation has **ESSEX GUN WORKS** on the left side of the receiver. Another has **HIBBARD** stamped on the left side, and **MODEL W.H.** stamped on the right; a holster with identical stampings was also available. Most have nickel-plated receivers and are serial numbered within the same ranges as, and have other characteristics identical to, regular-production H&R Handy-Guns, by variation. None of those inspected during this research had any markings identifying H&R as the original manufacturer. Anecdotal evidence suggests H&R manufactured a Handy-Gun for an independent telephone company in Colorado; none were located during this research.

Handi-Rifle

Break-action single-shot rifle that's been around in one form another since God invented dirt. Side lever release, automatic ejection, hardwood stock, transfer bar passive safety. Available in nearly every conceivable rimfire and centerfire chambering (except the biggest centerfires) and now made under the auspices of Marlin, this rifle is as good a bargain today as it ever was. Some newer models feature factory scopes, bull barrels, thumbhole stocks and other niceties, but they're still Handi-Rifles. Value is generally under $300 even in New or Excellent condition, sometimes remarkably under.

NOTE: The latest iteration of the Handi-Rifle (2008) is available in a wide variety of chamberings, from .223 to .500 S&W Magnum.

Synthetic Handi-Rifle

Basic Handi-Rifle design but with synthetic buttstock and forend (either grooved or beavertail). Available with iron sights or picatinny rail for mounting optics.

Exc.	V.G.	Good	Fair	Poor
375	280	200	175	100

Stainless Handi-Rifle

HAWKEN

St. Louis, Missouri

During the early part of the 19th century, Jacob and Samuel Hawken manufactured a variety of flintlock, percussion and cartridge rifles, shotguns and pistols. They are best known, however, for half stock Plains Rifles. Though of a plain nature, these arms were recognized for their accuracy and dependability. Early Hawken rifles will be worth a substantial premium over later examples. Some examples in very good condition may be worth as much as $50,000. Proceed with caution.

HECKLER & KOCH

Oberndorf/Neckar, Germany

At the end of WWII, the French dismantled the Mauser factory as part of their reparations; and the buildings remained idle until 1949, when firearms production was again allowed in Germany. Heckler & Koch was formed as a machine tool enterprise and occupied the vacant Mauser plant. In the early 1950s Edmund Heckler and Theodor Koch began to produce the G3 automatic rifle based on the Spanish CETME design and progressed to machine guns and submachine guns and eventually to the production of commercial civilian rifles and pistols. In 1990 the company got into financial difficulties because of a failed contract bid. In December 1990 the French state consortium GIAT announced the purchase of Heckler and Koch, but a little more than a year later the contract was cancelled. Later in 1991 the company was purchased by Royal Ordnance of Britain. In 2002 the company was sold to a combined group of European investors and long-time company managers.

Model 91 A2

This rifle is recoil-operated, with a delayed-roller lock bolt. It is chambered for the .308 Winchester cartridge and has a 17.7" barrel with military style aperture sights. It is furnished with a 20-round detachable magazine and is finished in matte black with a black plastic stock. Some areas of the country have made its ownership illegal.

4200	3950	3750	3300	2700	1000

Model 270

This model is chambered for the .22 LR cartridge. It is a sporting-styled rifle with a 16.5" barrel. It is furnished with either a 5- or a 20-round magazine and is blued, with a checkered walnut stock. This rifle was discontinued in 1985.

NIB	Exc.	V.G.	Good	Fair	Poor
600	500	450	350	250	150

Model 300

This model is similar to the Model 270 except that it is chambered for the .22 rimfire Magnum cartridge. It was not imported after 1988.

NIB	Exc.	V.G.	Good	Fair	Poor
800	675	500	350	250	150

Model 630

This model is chambered for the .223 and features the same roller-delayed semi-automatic action as found on the paramilitary-type weapons. This is a sporting-style rifle that has a polished blue finish and a checkered walnut stock. The barrel is 17.7" long, and the magazines offered hold either 4 or 10 rounds. Importation was discontinued in 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	850	600	450	350	300

Model 770

This model is similar to the Model 630 except that it is chambered for the .308 Winchester cartridge and has 19.7" barrel. It was not imported after 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	950	600	450	350	300

Model 820

This rifle is a falling design and chambered for the .30-06 cartridge. Two of these rifles are known in the U.S., one of which is in the H&K museum.

NIB	Exc.	V.G.	Good	Fair	Poor
3500	3000	—	—	—	—

Model 877

This rifle is a breech loading rifle chambered for .30-06 or .22-250 cartridge. Two of these rifles are known in the U.S., one of which is the H&K museum.

NIB	Exc.	V.G.	Good	Fair	Poor
3500	3000	—	—	—	—

Model 940

This model is essentially the same as the Model 770 except that it is chambered for the .30-06 cartridge. It has a 21" barrel and was not imported after 1986.

NIB	Exc.	V.G.	Good	Fair	Poor
1450	1100	800	600	400	300

Model SL6

This is Heckler & Koch's current sporting rifle chambered for the .223 cartridge. It has a 17.7" barrel and features the same basic action as the military versions. It has a matte black finish and a walnut stock with a vented walnut hand guard. The magazine holds 4 rounds.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	850	600	450	350	300

Model SL7

This model is similar to the SL6 except that it is chambered for the .308 Winchester cartridge and has a 3-round magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	850	600	450	350	300

Model SR9

This model was introduced into the U.S. market after the federal government prohibited the importation of H&K's other semi-automatic rifles. The SR9 is similar to the HK91 but has been certified by the BATF as a sporting rifle. This model features a special thumb hole stock made of Kevlar reinforced fiberglass. The action is a delayed-roller locked bolt semi-automatic design chambered for the .308 Winchester cartridge. The barrel is 19.7" in length and features adjustable rear sight with hooded front sight. The rifle weighs 10.9 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
2000	1700	1400	1000	700	500

Model SR9 (T) Target

Similar to the standard model SR9 but with the addition of a special MSG90 adjustable buttstock, PSG-1 trigger group, and a PSG-1 contoured hand grip. Rifle weighs 10.6 lbs.

3300	3000	2300	1950	1100	900

BASR Model

This is a bolt-action rifle chambered for various popular calibers. It has a stainless steel barrel and was essentially custom

built to the customer's specifications. The stock is of Kevlar. This model is quite rare because only 100 were manufactured in 1968.

Exc.	V.G.	Good	Fair	Poor
1750	1200	900	650	400

PSG-1

This rifle is a high precision sniping rifle that features the delayed-roller semi-automatic action. It is chambered for the .308 Winchester cartridge and has a 5-shot magazine. Barrel length is 25.6". It is furnished with a complete array of accessories including a 6x42-power illuminated Hensoldt scope. Rifle weighs 17.8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
14500	12500	9000	7500	6000	4000

Model SL8-1

This is a new generation .223 rifle modeled after the military Model G36 and introduced in 2000. It is built of carbon fiber polymer and is gas operated. Thumbhole stock with cheekpiece. Barrel length is 20.8". Magazine capacity is 10 rounds. Adjustable sights. Weight is approximately 8.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1600	1200	—	—	—	—

SLB 2000

Introduced in 2001 this gas-operated semi-automatic rifle is chamberd for the .30-06 cartridge. The receiver is built of lightweight alloy. The barrel is 16.7" in length and will accept interchangeable barrels at some future date. Oil finished walnut stock. Open sights with both barrel and receiver drilled and tapped for scope mounts. Magazine capacity is 2, 5, or 10 rounds. Weight is about 7.25 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1300	975	—	—	—	—

Model USC

Introduced in 2000 this semi-automatic blowback carbine is derived from H&K's UMP submachine gun. Chambered for the .45 ACP cartridge and fitted with a 16" barrel. Skeletonized stock. Accessory rail on top of receiver. Adjustable sights. Magazine capacity is 10 rounds. Weight is approximately 6 lbs.

1200	900	—	—	—	—

PISTOLS

HK4

This is a blowback-operated semi-automatic pistol based on the Mauser HSc design. It is chambered for .22 LR, .25 ACP, .32 ACP, and .380. These calibers were easily converted by switching the barrels, recoil springs and magazines. The rimfire model could be changed by rotating the breechface. The conversion kits were available for all calibers. The barrel is 3" long; and the finish is blued, with molded plastic thumb rest grips. This pistol was sold from 1968-1973 as the Harrington & Richardson HK4 and is so marked. It was completely discontinued in 1984.

P9

This is a single-action, delayed-blowback semi-automatic pistol chambered for 9mm or 7.65mm Parabellum. The action is based on the G-3 rifle mechanism. The barrel is 4" in length, and the pistol has an internal hammer and a thumb-operated hammer drop and decocking lever. There is also a manual safety and a loaded-chamber indicator. The finish is Parkerized, and the grips are molded plastic and well contoured. It has fixed sights. This model was manufactured between 1977 and 1984. This model is rarer than the P9S model.

NIB	Exc.	V.G.	Good	Fair	Poor
800	650	500	400	300	200

P9S

This model is similar to the Model P9 except that the action features a double-action capability and it is chambered for the .45 ACP and the 9mm Parabellum with a 5.5" barrel. This model was also manufactured between 1977 and 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
800	650	500	400	300	200

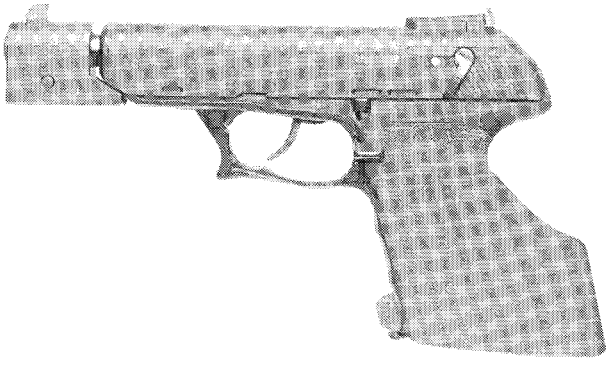
P9S Target Model

This version is similar to the Model P9S chambered for the 9mm or .45 ACP cartridges, with adjustable sights, and an adjustable trigger. It was discontinued in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	850	700	600	500	300

P9S Competition

Similar to the P9S target but with the addition of barrel weights and special competition grips.



NIB	Exc.	V.G.	Good	Fair	Poor
2000	1500	1200	—	—	—

VP 70Z

This is a blowback-operated semi-automatic chambered for the 9mm Parabellum cartridge. It is striker-fired and double-action-only. The barrel is 4.5" long, and the double-column magazine holds 18 rounds. The finish is blued, and the receiver and grip are molded from plastic. This model was discontinued in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	350	300	250	200

P7 PSP

This was the first of the squeeze-cocked H&K pistols. It is a single-action semi-automatic that is placed in the firing position by pressure on the front of the grip strap. This moves the striker into battery; and firing is then accomplished by a single action pressure on the trigger, releasing the grip strap cocking device and decocking the mechanism. This particular model does not have the extended finger guard on the trigger and also does not have an ambidextrous safety. It was discontinued in 1984.

NIB	Exc.	V.G.	Good	Fair	Poor
800	700	600	500	400	200

P7 K3

This is the "Squeeze Cocker" chambered for either the .380 or .22 LR caliber. It has a recoil buffer that is oil-filled and a 3.8" barrel. The magazine holds 8 rounds. This model was introduced in 1988.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	900	750	650	500	300

.22 Caliber Conversion Kit

This unit will convert the P7 K3 to fire the .22 LR cartridge.

.32 ACP Caliber Conversion Kit

NIB	Exc.	V.G.	Good	Fair	Poor
200	175	150	100	75	50

P7 M8

This is the 8-shot newer version of the "squeeze cocker." It has the heat-shield finger guard and the ambidextrous safety. It has a 4" barrel and a 3-dot sight system. The finish is matte blue or nickel with stippled black plastic grips. This model is no longer in production.

NIB	Exc.	V.G.	Good	Fair	Poor
1500	1200	900	700	500	300

NOTE: For night sights, introduced in 1993, add $100.

P7 M10

A new addition to the P7 series in 1993, this variation is chambered for the .40 S&W cartridge. Magazine holds 10 rounds and the finish is available in either blue or nickel. Pistol weighs 2.69 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	1000	800	650	500	300

NOTE: For night sights add $100.

P7 M13

This version is similar to the P7 M8 except that it has a double column 13-shot magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
1300	1000	800	650	500	300

NOTE: For night sights add $100.

SP89

Introduced in the early 1990s, this is a large frame semi-automatic pistol chambered for the 9mm cartridge. It features a 15-round magazine and a square notch rear sight with a hooded front sight. The pistol has a 4.5" barrel and is 13" overall. It weighs 4.4 lbs. In August 1993 this model was no longer imported due to a ban on assault pistols.

NIB	Exc.	V.G.	Good	Fair	Poor
4000	3600	3200	2500	1800	1000

USP SERIES

NOTE: Late in 1999 H&K began shipping its USPs and Mark 23s with an internal locking system. This lock-out is installed in the grip and blocks the movement of the hammer, trigger, and slide. It is operated with a two pronged key, supplied with the pistol. This system is in addition to the traditional trigger lock that is sold with each H&K firearm. In 2001 the stainless steel version of these pistols was discontinued.

In 2005 H&K offered a limited edition run of colr frame variations for the USP line. These colors are Desert tan, green and gray.

Gray: USP 45 and USP 40 Compact

Green: USP 45, USP 40, USP 40 Compact, and USP 45 Tactical.

Desert Tan: USP 45, USP 40, USP 40 Compact, and USP 45 Tactical and Mark 23.

Retail prices are the same for these color variations as the standtd black frame pistols.

USP 40

Introduced in 1993 this new semi-automatic H&K pistol features a new design that incorporates a short recoil modified

Browning action. Chambered for the .40 S&W cartridge this model has a 4.13" barrel and a magazine capacity of 13 rounds. Stainless steel model introduced in 1996. It weighs 1.74 lbs. Available in seven different variations from traditional double-action to double-action-only and various safety locations and styles. These variants numbered by H&K are listed.

1. DA/SA with safe position and control lever on left side of frame.
2. DA/SA with safe position and control lever on right side of frame.
3. DA/SA without safe position and decocking lever on left side of frame.
4. DA/SA without safe position and decocking lever on left side of frame.
5. DA only with safe position and safety lever on left side of frame.
6. DA only with safe position and safety lever on right side of frame.
7. DA only without control lever.
9. DA/SA with safe position and safety lever on left side of frame.
10. DA/SA with safety lever on the right side of frame.

From top to bottom is the USP 45, the USP 40, and the USP 40 Compact

800	600	450	300	200	150

USP Compact LEM (Law Enforcement Modification)

This model, introduced in 2002, is identical to the USP Compact .40 S&W Variant 7, but with a double-action-only trigger with a special trigger mechanism. The mechanism improves the double-action trigger performance and reduces the weight of pull to between 7.5 and 8.5 lbs. Offered in blued finish.

NIB	Exc.	V.G.	Good	Fair	Poor
820	650	—	—	—	—

USP 45 Match

Introduced in 1997 this model is a match grade variation of the USP. It is chambered for the .45 ACP cartridge. Fitted with a 6.02" barrel with barrel weight assembly. Adjustable rear sight and target front sight. Adjustable trigger stop. Blued finish. Weight is approximately 38 oz. Also available in a stainless steel version.

NIB	Exc.	V.G.	Good	Fair	Poor
1370	1100	—	—	—	—

NOTE: Add $60 for stainless steel.

USP 45 Compact

Introduced in 1997 this pistol is chambered for the .45 ACP cartridge. It has a 3.8" barrel and an overall length of 7.1". It weighs approximately 28 oz. Magazine capacity is 8 rounds.

NIB	Exc.	V.G.	Good	Fair	Poor
875	650	500	350	250	—

USP 45 Compact Tactical

Blued semi-auto .45 ACP. Double-action with 4.46" barrel, 8-round capacity. 27.5 oz. Polymer grip. MSRP: $1115.

USP .357 Compact

Introduced in mid-1998 this pistol is built on the same frame as the .40 S&W Compact but chambered for the .357 Sig cartridge. Magagine capacity is 10 rounds. Weight is about 28 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
800	600	450	300	200	150

USP 45 Expert

Introduced in the fall of 1998, this .45 ACP pistol is fitted with a 5.2" barrel and slide and 10-round magazine. Overall length is 8.7" and height is 1.87". Weight is approximately 30 oz. Adjustable low-profile sights. Limited availability of between 1,000 and 2,500 pistols. In 2003 this model was also offered chambered for the 9mm and the .40 S&W cartridge.

NIB	Exc.	V.G.	Good	Fair	Poor
1355	1000	—	—	—	—

NOTE: H&K price reduction in 2005.

USP 45 Tactical

This pistol was introduced in 1998. It is an enhanced version of the USP 45. It is fitted with a 4.9" threaded barrel with adjustable high profile target sights. Overall length is 8.6" and weight is approximately 36 oz. Magazine capacity is 10 rounds. Availability limited to between 1,000 and 2,500 pistols.

NIB	Exc.	V.G.	Good	Fair	Poor
1115	850	625	425	300	175

USP Elite

Introduced in 2003 this model features a 6.2" barrel chambered for the 9mm or .45 ACP cartridge. Fitted with a match trigger, adjustable trigger stop, adjustable micrometer rear target sights, extended floorplate and loaded chamber indicator. Weight is about 30 oz. empty. Magazine capacity is 10 rounds.

NIB	Exc.	V.G.	Good	Fair	Poor
1355	1000	—	—	—	—

NOTE: H&K price reduction in 2005.

USP 45 50th Anniversary Commemorative

Limited to 1,000 pistols this pistol features a high polish blue with 50th anniversary logo engraved in gold and silver. Supplied with custom-made wooden box with commemorative coin. Introduced in 2000.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	—	—	—	—	—

P2000 GPM

Introduced in 2003 this model is similar to the USP compact LEM pistol but with several modular features, such as interchangeable back straps, ambidextrous slide release, and short trigger reset distance. Chambered for the 9mm or .40 S&W cartridge and fitted with a 3.62" barrel. Fixed sights. Magazine capacity is 12 rounds for the .40S&W and .357 SIG, and 13 rounds for the 9mm. Weight is about 22 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
890	675	—	—	—	—

NOTE: Add $30 for magazine disconnect.

P2000 SK

This semi-auto double-action pistol is a subcompact version of the P2000. It is chambered for the 9mm or .40 S&W cartridge as well as the .357 SIG .It has a 2.5" barrel with an overall length of 6.4". Magazine capacity is 10 rounds for 9mm, 12 rounds for the .357 SIG, and 9 rounds for the .40 S&W. Weight is about 21 oz. Introduced in 2004.

Single-Shot Rifle

A high-grade single-shot that features a true falling-block action that is activated by a side lever on the action. It was available in the popular European cartridges of the era, and the barrel length varies from 22" to 28" in length. This rifle exhibits fine quality materials and workmanship. The select-grade walnut stock and schnabel forend are hand checkered. The finish of the rifle is scroll-engraved and blued. This company manufactured firearms from 1869 until 1895.

HIGGINS, J. C.

Chicago, Illinois

The Sears, Roebuck & Company of Chicago used the trade name J.C. Higgins on the firearms and other sporting goods it sold between 1946 and 1962. Arms bearing this tradename were manufactured by a variety of American gunmakers. See High Standard, Mossberg, etc.

HIGH STANDARD MANUFACTURING CORPORATION

New Haven, Hamden, and East Hartford, Connecticut

The High Standard Manufacturing Company was established in 1926, by Carl Swebilius and Gustave Beck to produce drills and machine tools. In 1932, the firm purchased the Hartford Arms & Equipment Company (q.v.) and began the manufacture of the latter's Model 1925 semi-automatic pistol as the Hi-Standard Model "B."

Throughout the High Standard Manufacturing Corporation's business life, its products were highly regarded for both their design and quality. While the company was originally located in New Haven, during WWII High Standard operated plants in New Haven and Hamden. After the war the operations were consolidated in Hamden. In 1968 the company was sold to the Leisure Group, Inc. The Leisure Group sold High Standard to High Standard, Inc. in January 1978. A final move was made to East Hartford, Connecticut, in 1977 where it remained until the doors closed in late 1984. In the spring of 1993 the High Standard Manufacturing Co, Inc. of Houston, Texas, acquired the company assets and trademarks as well as the .22 Target Pistols. These original assets were transfered from Connecticut to Houston, Texas, in July 1993. The first shipments of Houston manufactured pistols began in March 1994. Prices listed here are separated for both the Connecticut and Houston models. Collectors will pay a premium for the Connecticut pistols.

Model descriptions, photos, and prices by John J. Stimson, Jr.

LETTER MODELS

Model B

A .22 LR caliber semi-automatic pistol with either a 4.5" or a 6.75" round barrel and a 10-shot magazine. Blued; came with checkered hard rubber grips (later production versions have checkered grips impressed with the High Standard monogram). Introduced 1932, with serial numbers beginning at 5000. Early production utilized Hartford parts. Approximately 65,000 made. Add $75 premium for Type-I-B takedown. Add a $75 premium for early models with Hartford Arms front sight, safety, and takedown levers. Box with papers add premium of 15 percent.C&R eligible. Most guns are found in serial number ranges from 5,000 to about 95,894 and 148198 to about 151021.

Exc.	V.G.	Good	Fair	Poor
600	475	215	125	90

Model B-US

A version of the Model B with slight contour modifications to the back of the frame. Approximately 14,000 were made for the U.S. government in 1942-1943. Most are marked "PROPERTY OF U.S." On the top of the barrel and on the right side of the frame. Monogrammed hard rubber grips. Most guns are found in serial number range 92344 to about 111631.

Exc.	V.G.	Good	Fair	Poor
800	520	375	175	125

NOTE: Box with papers add premium of 20 percent.

Model C

Like the Model B except in .22 Short. Introduced 1936; approximately 4,700 made. Both plain and monogrammed hard rubber grips. Available with either a 4.5" or a 6.75" round barrel.

Exc.	V.G.	Good	Fair	Poor
725	450	300	225	150

NOTE: Add $75 premium for I-A takedown. Add $175 premuim for I-B takedown. Box with papers add premium of 15 percent.

Model A

Similar to the Model B but with checkered walnut grips over an extended grip and an adjustable sight. Introduced 1938; approximately 7,300 made. Available with either a 4.5" or a 6.75" round barrel. The same light barrel as the model B.

Exc.	V.G.	Good	Fair	Poor
975	750	400	175	125

NOTE: Add $175 premium for I-B takedown. Box with papers add premium of 15 percent.

Model D

Similar to a Model A but with a heavier weight barrel. (The middle weight barrel.) Available with either a 4.5" or a 6.75" barrel and optional checkered walnut grips. Introduced 1938; approximately 2,500 made.

Exc.	V.G.	Good	Fair	Poor
835	490	310	200	130

NOTE: C-R. Add $175 premium for I-B takedown. Box with papers add premium of 15 percent.

Model E

Like the Model D but with a still heavier weight barrel (the heavy weight barrel). Available with either a 4.5" or a 6.75" barrel. Checkered walnut grips with thumb rest. Introduced 1938; approximately 2,600 made.

Exc.	V.G.	Good	Fair	Poor
1500	925	650	250	140

NOTE: Add $175 for I-B takedown. Box with papers add premium of 18 percent.

Model S

Not a production model. Like the model B but with a smooth bore. Nine registered as Model S. Additional five with Model C slides are registered, Model C/S. Note ivory bead front sight. Others may exist but only 14 are registered with BATF. Manufactured in 1939 and 1940. Values for both variations are equal. 6.75" barrels. C-R.

NOTE: Serial numbers for registered samples.

Model S: 48142; 48143; 48144; 48145; 48146; 59474; 59458; 59459

Model C/S: 59279; 59460; 59469; 59473; 59478

5250	3950	3000	—	—

Hammer Letter Models

Second models made. Like the letter models with external hammers.

Model H-B, Type 1 Pre-War

Like the Model B but with exposed hammer. Introduced 1940; approximately 2,100 made.

Exc.	V.G.	Good	Fair	Poor
725	425	275	175	125

NOTE: Box with papers add premium of 15 percent.

Model H-B, Type 2 Post-War

Post-war variation has an external safety. Approximately 25,000 made.

Exc.	V.G.	Good	Fair	Poor
550	375	225	150	100

NOTE: Box with papers add premium of 15 percent.

Model H-A

Like the Model A but with exposed hammer. Introduced 1940; approximately 1,040 made.

Exc.	V.G.	Good	Fair	Poor
1600	1100	750	500	300

NOTE: Box with papers add premium of 15 percent.

Model H-D

Like the Model D but with exposed hammer. Introduced 1940; approximately 6,900 made.

Model H-D with 6.75" barrel

Exc.	V.G.	Good	Fair	Poor
1500	1000	650	400	250

NOTE: Box with papers add premium of 15 percent.

Model H-E

Like the Model E but with exposed hammer. Introduced 1940; approximately 2,100 made.

Exc.	V.G.	Good	Fair	Poor
1800	950	700	275	150

NOTE: Box with papers add premium of 15 percent.

REMINDER
Go to gun shows, not just to buy or sell, but to observe and learn.

Model USA—Model HD

Similar to the Model HD but 4.5" barrel only. Had fixed sights, checkered black hard rubber grips and an external safety. Early models blued; later model Parkerized. Introduced 1943; approximately 44,000 produced for the U.S. government.

Exc.	V.G.	Good	Fair	Poor
800	625	450	225	125

NOTE: Box with papers add premium of 20 percent.

Model USA—Model HD-MS

A silenced variation of the USA Model HD. Approximately 2,000 produced for the OSS during 1944 and 1945. 6.75" shrouded barrel. Early models blued; later model Parkerized. Only a few registered with BATF for civilian ownership.

Exc.	V.G.	Good	Fair	Poor
6600	5500	—	—	—

Model H-D Military

Similar to the HD but with external safety. Early production had checkered plastic grips; later production changed to checkered walnut. Introduced 1945; approximately 150,000 produced.

Exc.	V.G.	Good	Fair	Poor
600	450	275	200	125

NOTE: Box with papers add premium of 15 percent.

Lever Letter Models

Third design models which incorporate interchangeable barrels with a lever takedown.

G-.380

A .380 caliber semi-automatic pistol with a 5" barrel and 6-shot magazine. Blues with checkered plastic grips. Fixed sights. Introduced 1947, discontinued 1950; approximately 7,400 made. High Standard's only production centerfire pistol.

Exc.	V.G.	Good	Fair	Poor
750	550	375	150	115

NOTE: Box with papers add premium of 10 percent.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

G-B

Similar characteristics with the Model B but with interchangeable 4.5" or 6.75" barrels. Sold with either barrel or as a combination with both barrels. Fixed sights. Blued with monogrammed plastic grips. Last short frame model produced. Introduced 1949, discontinued 1950; approximately 4,900 produced.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
575	350	250	135	100

NOTE: Box with papers add premium of 15 percent. Add $225 premium for factory combination.

G-D

Similar characteristics with the Model D but with interchangeable 4.5" or 6.75" barrels. Sold with either barrel or as a combination with both barrels. Adjustable sights. Blued with checkered walnut grips. Optional checkered thumb rest walnut grips. Introduced 1949, discontinued 1950; approximately 3,300 produced.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
975	750	450	195	125

NOTE: Add $325 premium for factory combination, $50 premium for factory target grips. Box with papers add premium of 15 percent.

G-E

Similar characteristics with the Model E but with interchangeable 4.5" or 6.75" barrels. Sold with either barrel or as a combination with both barrels. Adjustable sights. Blued with checkered thumb rest walnut grips. Introduced 1949, discontinued 1950; approximately 2,900 produced.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1275	800	450	225	135

NOTE: Add $375 premium for factory combination. Box with papers add premium of 15 percent.

Olympic (commonly called "G-O")

New gun design for competitive shooting in .22 Short caliber. 4.5" or 6.75" barrels. Sold with either barrel or as a combination with both barrels. Grooved front and back straps on frame. Adjustable sights. Blued with checkered thumb rest walnut grips. Introduced 1949, discontinued 1950; approximately 1,200 produced. This model uses a special curved magazine. A few guns will utilize a straight-back magazine. The majority of these Olympics use the curved magazine with a humped back.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1500	875	550	225	125

NOTE: Add $375 premium for factory combination. Box with papers add premium of 15 percent. Add $300 for the straight magazine variation.

LEVER NAME MODELS

Fourth design models evolving from the lever letter series designs with slight changes.

Supermatic

.22 LR caliber pistol with 10-shot magazine. Heavy round barrel, blued finish; adjustable sights and brown plastic thumb rest grips. Grooved front and back straps on frame. Available with 4.5" or 6.75" barrels or combination with both barrels. Ribbed barrels and provisions for weights. A 2 oz. and a 3 oz. weight were provided with this model, as was a filler strip for when the weights were not used.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
750	550	400	275	135

NOTE: Add $250 for factory combination. Box with papers add premium of 15 percent.

Olympic

.22 Short caliber pistol with 10-shot magazine. Heavy round barrel, blued finish, adjustable sights and brown plastic thumb rest grips. Grooved front and back straps on frame. Available with 4.5" or 6.75" barrels or combination with both barrels. Ribbed barrels and provisions for weights. Weights of 2 oz. and 3 oz. were provided with this model, as was a filler strip for when the weights were not used.

Exc.	V.G.	Good	Fair	Poor
1000	750	575	275	150

NOTE: Add $250 for factory combination. Box with papers add premium of 15 percent.

Field King

.22 LR caliber pistol with 10-shot magazine. Heavy round barrel, blued finish, adjustable sights and brown plastic thumb rest grips. Available with 4.5" or 6.75" barrels or combination with both barrels. No rib on barrels or provisions for weights.

Exc.	V.G.	Good	Fair	Poor
575	380	250	150	125

NOTE: Add $225 premium for factory combination. Box with papers add premium of 15 percent.

Sport King

.22 caliber pistol with 10-shot magazine. Lightweight round barrel, blued finish, fixed sights and brown plastic thumb rest grips. Available with 4.5" or 6.75" barrels or combination with both barrels. Early models did not have a slide holdback when the magazine was empty. Early variation without holdback was produced in about twice the quantity as the later models incorporating this feature.

Exc.	V.G.	Good	Fair	Poor
425	300	225	155	110

NOTE: Add $200 premium for factory combination. Box with papers add premium of 15 percent. Add a $25 premium for guns with holdback feature.

100 SERIES MODELS

Fifth design models evolving from the lever name series designs. This series introduced the small pushbutton barrel release takedown and deletes the shrouded breach.

Supermatic S-100

Like the lever takedown Supermatic but with new takedown. Available with 4.5", 6.75", or a combination with both barrel lengths. Grooved front and back straps on frame. This model produced briefly in 1954. Weights of 2 oz. and 3 oz. were provided with this model, as was a filler strip for when the weights were not used.

Exc.	V.G.	Good	Fair	Poor
825	600	400	175	125

NOTE: Add $250 for factory combination. Box with papers add premium of 15 percent.

Olympic O-100

Like the lever takedown Olympic but with new takedown. Available with 4.5", 6.75", or a combination with both barrel lengths. Grooved front and back straps on frame. This model produced briefly in 1954. Weights of 2 oz. and 3 oz. were provided with this model, as was a filler strip for when the weights were not used.

Exc.	V.G.	Good	Fair	Poor
1250	700	475	250	135

NOTE: Add $250 for factory combination. Box with papers add premium of 15 percent.

Field King FK-100

Like the lever takedown Field King but with new takedown. Available with 4.5", 6.75", or a combination with both barrel lengths. This model produced briefly in 1954.

Exc.	V.G.	Good	Fair	Poor
750	495	385	175	125

NOTE: Add $225 premium for factory combination. Box with papers add premium of 15 percent.

Sport King SK-100

Like the lever takedown Sport King but with new takedown. Available with 4.5", 6.75", or a combination with both barrel lengths. This model produced 1954 to 1957. In late 1958 Col. Rex Applegate imported about 300 of these pistols into Mexico. These guns are marked with his compay's name "ARMAMEX." Marked "ARMAMEX, MEXICO" on the right side of the barrel and "SPORT KING/CAL .22 L.R." on the left side of the barrel. Serial numbers around 870,084-870,383. Note that the Applegate guns were made after the 102 series was in production. Armamex catalog number 1910.

Exc.	V.G.	Good	Fair	Poor
425	250	200	135	100

NOTE: Add $200 premium for factory combination. Add $250 premium for Armamex version. Box with papers add premium of 10 percent.

Sport King Lightweight SK-100

Aluminum frame like Flite King LW-100 but in .22 LR caliber. Produced 1956 to 1964. Also available nickel plated 1957 to 1960.

Exc.	V.G.	Good	Fair	Poor
525	325	200	140	100

NOTE: Add $150 premium for nickel finish, $200 premium for factory combination. Box with papers add premium of 12 percent.

Flite King LW-100

.22 Short caliber semi-automatic pistol with 10-shot magazine. Blued finish with black anodized aluminum frame and slide. Brown plastic checkered thumb rest grips. Fixed sights. Available with 4.5", 6.75", or a combination with both barrel lengths. This model produced 1954 to 1957.

Exc.	V.G.	Good	Fair	Poor
550	400	285	145	100

NOTE: Add $200 for factory combination. Box with papers add premium of 12 percent.

Dura-Matic M-100

.22 LR caliber semi-automatic pistol with 10-shot magazine. Striker-fired, fixed sights, blued finish, brown checkered plastic one-piece grip. Takedown by thumb nut. Available with 4.5", 6.5", or a combination with both barrel lengths. This model produced briefly in 1954.

Exc.	V.G.	Good	Fair	Poor
350	225	165	150	95

NOTE: Add $150 premium for factory combination. Box with papers add premium of 12 percent.

101 SERIES MODELS

Sixth design models evolving from the 100 series. This series continued the small pushbutton barrel release takedown.

Olympic O-101

A .22 Short caliber semi-automatic pistol with a 10-shot magazine. Heavy round barrel, blued finish, adjustable sights and brown plastic thumb rest grips. Grooved front and back straps on frame. Available with 4.5", 6.75", or a combination with both barrel lengths. The 6.75" barrel incorporates a muzzlebrake with one slot on either side of the front sight.

Exc.	V.G.	Good	Fair	Poor
950	600	450	200	175

NOTE: Add $250 premium for factory combination. Box with papers add premium of 13 percent.

Supermatic S-101

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Heavy round barrel, blued finish, adjustable sights and brown plastic thumb rest grips. Grooved front and back straps on frame. Available with 4.5", 6.75", or a combination with both barrel lengths. The 6.75" barrel incorporates a muzzlebrake with one slot on either side of the front sight. Also produced with U.S. marking for the military.

Exc.	V.G.	Good	Fair	Poor
775	475	360	190	130

NOTE: Add $250 premium for factory combination. Box with papers add premium of 13 percent.

Field King FK-101

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Heavy round barrel, blued finish, adjustable sights and brown plastic thumb rest grips. Available with 4.5", 6.75", or a combination with both barrel lengths.

Exc.	V.G.	Good	Fair	Poor
625	475	360	175	125

NOTE: Add $225 premium for factory combination. Box with papers add premium of 15 percent.

Dura-Matic M-101

Like the Dura-matic M-100 with slightly different locking method for thumb nut takedown. Produced 1954 to 1970.

Later appeared renamed "Plinker" M-101 in 1971 to 1973. Plinker not available with both barrel combinations. A slightly modified version was sold by Sears Roebuck & Co. as the J. C. Higgins M-80.

Exc.	V.G.	Good	Fair	Poor
350	225	140	110	80

NOTE: Add $150 premium for factory combination. Box with papers add premium of 10 percent.

Conversion Kits

These kits convert .22 LR to .22 Short and include a barrel, an aluminum slide, and magazine for .22 Short to .22 LR in which case the slide is steel. Prices are for the kit in original factory boxes.

NOTE: First advertised for 101 Series guns. Later, versions were produced for lever takedown guns. Catalog numbers unknown for conversion kits for lever takedown guns.

Exc.	V.G.
600	475

102 & 103 SERIES MODELS

The 102 Series was a major design change incorporating a new frame with a large pushbutton takedown release. Also new was a superb adjustable sight. There is little difference between the two series.

Supermatic Trophy

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. A tapered barrel with an enlarged register at the muzzle end to hold a removable muzzlebrake. Super polished blue finish; adjustable sights; 2 and 3 oz. adjustable weights and checkered walnut thumb rest grips. Grooved front and back straps on frame. Available with 6.75", 8" or 10" barrels. Occasionally sold as a combination including two barrels. Premiums for 10" barrels and combinations in original boxes. 5.5" bull barrel available in 103s after April 1962, 7.25" fluted barrels available in 103s after April 1963.

Exc.	V.G.	Good	Fair	Poor
1100	775	525	200	120

NOTE: Add $125 premium for 8" barrel and $225 premium for 10" barrel. Box with papers add premium of 12 percent. Occasionally found with the optional light oak case, which will command a premium of about 14 percent.

Supermatic Citation

Like the Supermatic Trophy with checkered plastic grips. Blued finish without the trophy's super polished finish. Grooved front and back straps on frame. 5.5" bull barrel available in 103s after April 1962. Also produced with U.S. marking for the military.

Exc.	V.G.	Good	Fair	Poor
725	495	375	165	120

NOTE: Add $100 premium for 8" barrel and $200 premium for 10" barrel. Box with papers add premium of 12 percent. Occasionally found with optional light oak case, which will command a premium of about 18 percent.

Supermatic Tournament

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Barrels are round and tapered. Blued finish, adjustable sights and checkered plastic grips. Available with 4.5", 6.75", or a combination with both barrels. Combinations available in 102 Series only. 5.5" bull barrel replaced the 4.5" barrel in early 1962. Also produced with **U.S.** marking for the military.

Exc.	V.G.	Good	Fair	Poor
640	475	275	155	110

NOTE: Add $200 premium for factory combination. Box with papers add premium of 12 percent.

Olympic

A .22 Short caliber version of the Supermatic Citation. Early models marked "Olympic Citation," changed to "Olympic" only in 1960. Grooved front and back straps on frame. 6.75", 8" and 10" barrels produced. 5.5" bull barrel available on later 103 production.

Exc.	V.G.	Good	Fair	Poor
1150	600	375	175	120

NOTE: Add $125 premium for 8" barrel and $225 premium for 10" barrel and $150 premium for "Olympic Citation" marked guns. Box with papers add premium of 12 percent.

Olympic ISU

Like an Olympic but only available with a 6.75" barrel with integral muzzlebrake. Grooved front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
1150	675	360	165	120

NOTE: Box with papers add premium of 12 percent.

Olympic Trophy ISU

An Olympic ISU with a Supermatic Trophy finish. Grooved front and back straps on frame. Produced in the 103 Series only. Fewer than 500 produced.

Exc.	V.G.	Good	Fair	Poor
2400	775	375	165	135

NOTE: Box with papers add premium of 10 percent.

Sport King

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Barrels are lightweight, round, and tapered. Blued finish; fixed sights and checkered plastic grips. Available with 4.5", 6.75", or a combination with both barrel lengths. Produced 1957 to 1970 and 1974 to 1977. Also available 1974 to 1977 with nickel finish. $100 premium for nickel finish and $200 premium for factory combination. **NOTE:** Box with papers add premium of 10 percent.

Flite King

A .22 Short caliber version of the Sport King Models 102 and 103. Note these models have steel frames.

Exc.	V.G.	Good	Fair	Poor
475	360	265	150	100

NOTE: Add $200 premium for factory combination. Box with papers add premium of 12 percent.

Sharpshooter

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. 5.5" bull barrel, blued finish, adjustable sights, checkered plastic grips. Some produced with Model 103-marked slides. Although the 103-marked guns have 1969 and later serial numbers they were shipped after the introduction of the Sharpshooter in 1971 and were probably converted from unsold Sport Kings. No premium for 103-marked. Variation without series marked on slide is the most plentiful. Produced 1971 to 1977.

Exc.	V.G.	Good	Fair	Poor
500	325	265	154	110

NOTE: Box with papers add premium of 15 percent.

Conversion Kits

These kits convert .22 LR to .22 Short and include a barrel, an aluminum slide, and magazine. Prices are for kits in original boxes.

Exc.	V.G.
900-700	575

104 SERIES MODELS

The last of the slant grip gun designs. The early production marked "Model 104." Later production is unmarked.

Supermatic Trophy

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Super polished blue finish; adjustable sights; 2 and 3 oz. adjustable weights, checkered walnut thumb rest grips. Grooved front and back straps on frame. Available with 5.5" bull or 7.25" fluted barrels. Both barrels accept the removable muzzlebrake.

Exc.	V.G.	Good	Fair	Poor
1050	625	425	175	110

NOTE: Add $150 premium for high polish blue finish. Box with papers add premium of 12 percent.

Supermatic Citation

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Blue finish; adjustable sights; 2 and 3 oz. adjustable weights, checkered walnut thumb rest grips. Grooved front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
725	500	325	125	110

NOTE: Box with papers add premium of 12 percent.

Olympic

Like the 103 Series 8" barrel models.

Exc.	V.G.	Good	Fair	Poor
1200	650	375	175	110

NOTE: Box with papers add premium of 12 percent.

Olympic ISU

Like the 103 model. 6.75" barrel with integral brake. 5.5" version introduced in 1964. Catalogs and price list refer to the 9295 as both Olympic and Olympic ISU. It met the ISU regulations and included a removable muzzlebrake and weights.

Exc.	V.G.	Good	Fair	Poor
1100	625	360	175	110

NOTE: Box with papers add premium of 12 percent.

Victor

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. 4.5" and 5.5" slab-sided barrels with either ventilated or solid ribs. The adjustable sights are integral with the rib. Blue finish, barrel tapped for weight, checkered walnut thumb rest grips. Grooved front and back straps on frame. Probably fewer than 600 of these slant grip Victors in all configurations. Probably fewer than 40 each of the 4.5" guns. Trigger is adjustable for both pull and over-travel. Most guns in serial number range above 2401xxx with a few in the ML serial number series. Note the early vent rib barrels were steel and later ones aluminum without a change in catalog numbers. BEWARE—fakes exist.

Victor with 4.5" solid-rib barrel

Victor with 5.5" vent rib barrel

Exc.	V.G.	Good	Fair	Poor
2750	1500	600	425	250

NOTE: Add $75 premium for steel rib, $200 premium for solid rib, and $200 premium for 4.5" barrel. Box with papers add premium of 15 percent.

106 SERIES MODELS

Referred to as military models, this series was designed to provide the same grip angles and feel of the Colt military model 1911. This design was introduced in 1965 and continued through most of 1968.

Supermatic Trophy

Like the 104 Series Supermatic Trophy with the new military frame. Stippled front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
1000	600	425	190	120

NOTE: Add $100 premium for high polish blue finish, $200 premium for guns with boxes and accessories if factory records verify model numbers. Box with papers add premium of 12 percent.

Supermatic Citation

Like the 104 Series Supermatic Citation with the new military frame. Stippled front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
675	475	300	200	120

NOTE: Add $150 premium for guns with boxes and accessories if factory records verify model numbers. Box with papers add premium of 12 percent.

Supermatic Tournament

Like the 104 Series Supermatic Tournament with the new military frame. Stippled front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
600	375	250	165	120

NOTE: Add $125 premium for guns with boxes and accessories if factory records verify model numbers. Box with papers add premium of 12 percent.

Olympic

Listed in catalog but not in shipping records. Catalog number 9235 for 5.5" barrel.

WARNING: There is no evidence that this model was actually produced.

Olympic ISU

Like the 104 Series Olympic ISU with the new military frame. Stippled front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
1050	650	385	200	120

NOTE: Add $200 premium for guns with boxes and accessories if factory records verify model numbers. Box with papers add premium of 12 percent.

107 SERIES MODELS

The evolutionary successor to the 106 Series. This series had the frame redesigned to eliminate the plugging of the spring hole produced with the old tooling. During the time of this series production, the MILITARY marking on the frame was removed and then later reappeared near the end of the end of the traditional serial number series. The MILITARY marking is absent from the guns with the ML prefixed serial numbers. There is no premium associated with these variations.

Olympic ISU

Like the 106 Series Olympic ISU.

Exc.	V.G.	Good	Fair	Poor
1100	675	525	225	110

NOTE: Box with papers add premium of 12 percent.

Olympic ISU 1980 Commemorative

A limited edition of the 107 Olympic ISU with 1,000 produced. "USA" prefix on serial numbers from 0001 to 1000. Engraved, right side of slide has the five gold ring Olympic logo. Offered with lined presentation case.

Exc.	V.G.	Good	Fair	Poor
1500	850	525	300	175

NOTE: Prices are for guns with box, papers, and presentation case; otherwise deduct $250 for guns in excellent condition.

Supermatic Trophy

Like the 106 Series Supermatic Trophy.

Exc.	V.G.	Good	Fair	Poor
925	550	360	200	120

NOTE: Box with papers add premium of 12 percent.

Supermatic Trophy 1972 Commemorative

A limited edition of the 107 Supermatic Trophy with 1000 planned. "T" prefix on serial numbers from 0000 to 999. Engraved, right side of slide has the five gold ring Olympic logo. Offered with lined presentation case. Only 107 guns listed in the shipping records, plus one frame. A couple of prototypes believed to exist in the regular serial number series. Prices are for guns in original presentation cases. C-R. One fully engraved gun known to exist.

NOTE: One fully engraved gun is known.

NIB	Exc.	V.G.	Good	Fair	Poor
6250	4500	—	—	—	—

Supermatic Citation

Like the 106 Series Supermatic Citation.

Exc.	V.G.	Good	Fair	Poor
625	425	300	225	110

NOTE: Box with papers add premium of 12 percent.

Supermatic Tournament

Like the 106 Series Supermatic Tournament. Smooth front and back straps on frame.

Exc.	V.G.	Good	Fair	Poor
550	360	300	175	110

NOTE: Box with papers add premium of 12 percent.

Sport King

Like the 103 Series Sport King with the military frame.

Exc.	V.G.	Good	Fair	Poor
345	225	195	155	100

NOTE: Box with papers add premium of 12 percent.

Victor

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. 4.5" and 5.5" slab-sided barrels with either ventilated or solid ribs. The adjustable sights are integral with the rib. Blue finish, barrel tapped for weight, checkered walnut thumb rest grips. Stippled front and back straps on frame. Early ventilated ribs were steel; aluminum replaced the steel on later ventilated ribs. Still later a clearance groove was added for spent shell ejection behind the barrel. Early models marked THE VICTOR on the left side of the barrel; later guns marked simply VICTOR on the left side of the frame. A few transition guns marked in both locations.

Exc.	V.G.	Good	Fair	Poor
775	500	350	200	120

NOTE: Add $125 premium for steel ribs, $125 premium for solid rib guns, premium for 4.5" barreled guns, $140 premium for Hamden guns (7-digit serial numbers and ML prefix serial numbers below ML 25,000). Box with papers add premium of 12 percent.

Sharpshooter

Like the 103 Series Sharpshooter with the military frame.

Exc.	V.G.	Good	Fair	Poor
450	300	225	175	110

NOTE: Box with papers add premium of 12 percent.

Survival Kit

An electroless nickel Sharpshooter with 5.5" barrel in a canvas carrying case with an extra electroless nickel magazine.

Exc.	V.G.	Good	Fair	Poor
750	500	300	175	110

NOTE: Deduct $100 for guns without the case and $65 for guns without the extra magazine for guns in excellent condition.

10-X

A .22 LR caliber semi-automatic pistol with a 10-shot magazine. Matte blue finish, adjustable sights, checkered walnut thumb rest grips painted black. Stippled front and back straps on frame. Available with 5.5" bull barrel. Assembled by a master gunsmith. Gunsmith's initials stamped in frame under left grip panel. Produced in 1981.

Exc.	V.G.	Good	Fair	Poor
2750	1550	900	350	125

NOTE: Prices are for guns with box and papers including test target. Otherwise deduct $175.

SH SERIES MODELS

The final design produced by High Standard. A change in takedown from the large pushbutton introduced with the 102 Series and continuing through the 107 Series, to a hex socket head cap screw takedown.

Supermatic Trophy

Like the 107 Supermatic Trophy with a new takedown.

Exc.	V.G.	Good	Fair	Poor
600	375	275	165	120

NOTE: Box with papers add premium of 10 percent.

Supermatic Citation

Like the 107 Supermatic Citation with a new takedown.

Exc.	V.G.	Good	Fair	Poor
525	350	250	175	120

NOTE: Box with papers add premium of 10 percent.

Citation II

A new gun like the Supermatic Citation but with the barrel slabbed on the sides like the Victor and smooth front and back straps on frame. 5.5" and 7.25" barrels available. Blued finish, adjustable sights. Electroless nickel version utilized in some survival kits.

Exc.	V.G.	Good	Fair	Poor
475	350	250	155	110

NOTE: Box with papers add premium of 10 percent.

Sport King

Like the 107 Sport King with a new takedown. Electroless nickel finish also available.

Exc.	V.G.	Good	Fair	Poor
300	225	165	140	90

NOTE: Box with papers add premium of 10 percent.

Victor

Like the 107 Victor with a new takedown. Only available with 5.5" barrel.

Exc.	V.G.	Good	Fair	Poor
550	330	250	175	110

NOTE: Box with papers add premium of 10 percent.

Sharpshooter

Like the 107 Sharpshooter with a new takedown. Electroless nickel version utilized in some survival kits.

Exc.	V.G.	Good	Fair	Poor
375	250	200	155	110

NOTE: Box with papers add premium of 10 percent.

10-X

Like the 107 10-X with a new takedown. Also available with 7.25" fluted barrel and a 5.5" ribbed barrel like a Victor.

Exc.	V.G.	Good	Fair	Poor
2350	1450	825	350	125

NOTE: Prices are for guns with box and papers including test target. Otherwise deduct $150. Add $500 premium for 7.25" barrel, $1,000 for ribbed barrel like Victor.

Survival Kit

Either an electroless nickel Sharpshooter or electroless nickel Citation II with 5.5" barrel in a canvas carrying case with an extra electroless nickel magazine. Two different fabrics utilized during production.

Exc.	V.G.	Good	Fair	Poor
700	475	275	200	110

NOTE: Deduct $100 for guns without the case and $65 for guns without the extra magazine for guns in excellent condition.

Conversion Kits for Military Frame Guns

These kits convert .22 LR to .22 Short and include a barrel, an aluminum slide, and 2 magazines.

Exc.	V.G.
625	390

NOTE: Prices are for kits in original boxes.

RECENTLY MANUFACTURED HOUSTON MODELS

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

HIGH STANDARD DERRINGERS

A .22 caliber or .22 Magnum caliber Over/Under double-action-only derringer with 3.50" barrels. They are found with three different types of markings:

Type 1 Markings are found on early models which are marked "HI-STANDARD" / "DERRINGER" and have the EAGLE logo on the left side of the barrel. These models were marked "D-100" for the .22 caliber and "DM-101" for the .22 Magnum on the left side of the barrel. Date range 1962 to about 1967.

Type 2 Markings are found on later models were marked "HI-STANDARD" / "DERRINGER" and had the TRIGGER logo. The early .22 caliber models were marked D-100 and the later .22 caliber models beginning about 1969 were marked D-101 on the left side of the barrel. The .22 Magnum models were marked DM-101on the left side of the barrel. Date range 1967 to about 1970.

Type 3 Markings are found on the latest models were marked simply "DERRINGER" without HI STANDARD, or either logo. These models were also marked D-101 for the .22 caliber and DM-101 for the .22 Magnum on the left side of the barrel. Date Blue, white or black grips

Blued finish, white or black grips, 1962-1984

NOTE: Prices are for GP serial number guns with presentation case. $100 premium for DM prefix guns in Exc. condition with presentation case. $150 premium for 1960s gold guns in Exc. condition with presentation cases.

HIGH STANDARD REVOLVERS

POLICE-STYLE REVOLVERS

The revolvers begin with the R-100 design series and continue through the R-109 design series. Later steel-framed Sentinels carry no design series markings. The changes of design series designations indicate design changes to the guns. The only R-105 known to date is a private label gun made for Sears. The design series designations and the associated catalog numbers listed are the best estimates at the time of publication.

Earliest Sentinels in 1955 were in a seperate serial number series from 1 through approximately 45000. Then they were included in serial number series common to all handguns. In 1974 they were again put in a separate serial number series with an S prefix: S101 through S79946. Many of the later guns had a V suffix which indicated the gun was visually imperfect but guaranteed to work properly.

Sentinel aluminum frames

A 9-shot single-action or double-action revolver with swing-out cylinder for .22 Short, Long, or LR cartridges. Fixed sights. The Sentinel snub 2.375" barrel model had a bobbed hammer from its introduction until 1960. Beginning in 1961 this changed to a standard spur hammer with no change in the catalog number. Beginning with R-102 series the ejector had a spring return. Available in configurations listed.

High Standard private-labeled the aluminum-framed Sentinels for both Sears and Western Auto.

From 1957 through 1962 High Standard offered the 2.375" snub-barreled Sentinel in three different color anodized frames. These guns had nickel-plated cylinders, triggers, and hammers. The grips were round-butt ivory-colored plastic.

Exc.	V.G.	Good	Fair	Poor
200	125	95	70	45

NOTE: Add $20 premium for nickel. Deduct $15 for early models without spring return ejector.

Gold

Exc.	V.G.	Good	Fair	Poor
500	275	185	80	55

NOTE: Add $20 for R-102 marked guns.

Turquoise

Exc.	V.G.	Good	Fair	Poor
575	300	185	80	55

NOTE: Add $20 for R-102 marked guns.

Pink

Exc.	V.G.	Good	Fair	Poor
575	270	185	80	55

NOTE: Add $20 for R-102 marked guns.

Sentinel Imperial

Has two-piece walnut square-butt grips, ramp front and adjustable rear sights.

Exc.	V.G.	Good	Fair	Poor
265	160	125	75	50

NOTE: Add $15 premium for nickel.

Sentinel Deluxe

Has two-piece walnut square-butt grips and fixed sights.

Exc.	V.G.	Good	Fair	Poor
225	145	105	75	50

NOTE: Add $20 premium for nickel.

Sentinel Snub

Has a 2.375" barrel with round-butt grips.

Exc.	V.G.	Good	Fair	Poor
275	145	110	75	50

NOTE: Add $20 premium for nickel.

Sentinel Steel Frames

This model is like the Mark I sentinels without the Mark I markings. Offered as a combination with cylinders for .22 LR and .22 Win. Mag. Prices are for guns with both cylinders.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
300	245	225	80	55

NOTE: Add $25 premium for adjustable sights. Deduct $50 for guns with only one cylinder.

Kit Gun

A 9-shot single-action or double-action revolver with swing-out cylinder for .22 Short, Long, or LR cartridges. Blue finish, aluminum frame, 4.0" barrel, and adjustable sights. Wood round-butt grips.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
235	145	125	80	55

Sentinel Mark I

A 9-shot single-action or double-action revolver with swing-out cylinder for .22 Short, Long, or LR cartridges. Steel frame, and fixed sights. Available with blue and nickel finishes in 2", 3", and 4" barrels. Adjustable sights available on 3" and 4" barreled guns only. Wood square-butt grips.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*

(1) 3000000. This 9211 Victor shipped 1 March 1974

(2) Last gun in regular series shipping in 1975. This 9247 Supermatic Trophy shipped 29 August 1975

(3) Last serial number in regular series excluding the special Victory S/N 2000000. This 9329 Double Nine shipped 26 October 1976

(4) First G prefix guns to assembly 8 July 1975, packed 14 July 1975, shipments began 21 July 1975

(5) Last? Leisure Group G prefix 12 August 1977

(6) G 19299 — G 19319 are all 9201 Sport Kings 20 guns all shipped March 1978

(7) First High Standard Inc.: G20000-G20105 (103 guns) are all 9244 Supermatic Citations

G20,106-G20223 (116 guns) are all 9201 Sport Kings. All guns shipped March, April and May 1978

(8) G 6-digit are all 9200 or 9201 Sport Kings. Note right most digit is always a zero so the serial number increments by 10's not 1's

(9) First ML prefix serial number. To production 22 July 1975, packed 25 July 1975, shipped 25 July 1975. Note records shot ML prefix from ML 01001 to ML 01099 and ML prefix from ML 10000 on. This needs to be verified by observation of actual guns.

(10) Last Hamden ML prefix 14 December 1976

(11) EH 00001 9217. First East Hartford Gun 16 June 1977

(12) First East Hartford ML prefix pistol. First shipments of ML prefix guns 17 June 1977

(13) Last Leisure Grup ML prefix 12 December 1977

(14) First pistols with ML prefix made for High Standard Inc. Mixed production dates between 2 February 1978 and 9 November 1978 with one gun manufactured 16 February 1980

(15) First pistols with ML prefix made for High Standard Inc. 21 March 1978

(16) Last regular ML prefix gun 15 September 1981

(17) Gun is a single with no other listed on the page

(18) MLG prefix are all 9259 Sport Kings. 123 guns. All shipped May 1980

(19) First SH serial number shipped 22 May 1981

(20) Last SH gun 25 June 1984. Last observed shipment 28 July 1984. Last SH serial number SH 34075. Frames only SH 34000-SH 34075.
Note overlap with serial numbers of shipped guns. Frames to G. W. Elliott 13 November 1984.
Leisure Group sold High Standard division to High Standard Inc. in 1978

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Exc.	V.G.	Good	Fair	Poor
350	265	200	125	60

Hombre

A nine shot single-action or double-action revolver for .22 Short, Long, or LR cartridges. Blue or nickel finish. Aluminum frame, 4" barrel, fixed sights and square-butt walnut grips.

Exc.	V.G.	Good	Fair	Poor
225	150	110	80	55

NOTE: Add $20 premium for nickel.

Durango

A nine-shot single- or double-action revolver for .22 Short, Long, or LR cartridges. Blue or nickel finish. Aluminum or steel frame, 4.5" or 5.5" barrel, fixed or adjustable sights and square-butt walnut grips. Two models have their grip straps and trigger guard with contrasting plating to the blue frame.

Exc.	V.G.	Good	Fair	Poor
225	150	110	80	55

NOTE: Add $20 premium for nickel. Add $25 premium for steel frame and $25 premium for adjustable sights.

The Gun/High Sierra

A 9-shot single- or double-action revolver for .22 Short, Long, or LR cartridges. Also available as a combination model with a second cylinder in .22 Mag. Blued finish with gold plated grip straps and trigger guard. Steel frame, 7" octagonal barrel, fixed or adjustable sights and square-butt walnut grips. This revolver was introduced as "The Gun" in the February 1973 price list and the name was changed to "High Sierra" by November 1973 price list. Note that early "The Gun" had neither "High Sierra" markings nor any other name.

Exc.	V.G.	Good	Fair	Poor
315	220	150	95	60

NOTE: Add $60 premium for presentation case. Add $55 premium for combination models. Add $25 for adjustable sights.

BLACKPOWDER REVOLVERS

These guns were a series of .36 caliber cap-and-ball revolvers that began production in 1974 and ran through 1976. These are reproductions of the Confederate copies of the Colt Model 1851 Navy. Note most Confederate copies of the Colt had round barrels, not octagonal as found on Colts. The frames were made by High Standard and the balance of the parts by Uberti. The guns were assembled and finished by High Standard.

Griswold & Gunnison

Blued finish with a brass frame. Six-shot single-action. Commemorative gun came wtih a pine presentation case and a brass belt plate depicting the Georgia state seal.

Exc.	V.G.	Good
325	235	175

NOTE: Price is for gun in case with accessories. Deduct $100 for gun only in Exc. condition.

Leech & Rigdon

Blued finish with a steel frame. Six-shot single-action. Commemorative gun came with a presentation case and a reproduction of a Civil War belt buckle.

Exc.	V.G.	Good
325	235	175

NOTE: Price is for gun in case with accessories. Deduct $100 for gun only in Exc. condition.

Schneider & Glassick

Blued finish with a steel frame. Six-shot single-action. Commemorative gun came with a presentation case and a modern version of a Confederate "D" guard Bowie knife.

Exc.	V.G.	Good
450	235	175

Bicentennial 1776-1976

Blued finish with a steel frame. Six-shot single-action. Guns came with two versions of presentation case. One case is pine, marked High Standard and the trigger logo is on the lid with a powder flask and silver dollar-sized medallion inside. The other is a brown leatherette covered case with American Bicentennial 1776-1976 and contains a pewter Bicentennial belt buckle.

Exc.	V.G.	Good
450	235	175

Special Presentation Bicentennial

100 guns were available in presentation cases with "US" serial number prefixes. Serial numbers US 11 through US 50 are in walnut presentation cases with purple fitted lining and a pewter Bicentennial belt buckle. The top of the case is marked "Limited Edition / American Bicentennial / 1776 – 1976." The guns are engraved on the frame, cylinder barrel, loading lever, and hammer. Catalog number 9339 has a steel frame with a round barrel and catalog number 9340 has a brass frame with an octagonal barrel.

Exc.	V.G.	Good
675	500	350

HIGH STANDARD SHOTGUNS

High Standard began making shotguns for Sears Roebuck in the late 1940s. In 1960 High Standard began marketing shotguns under its own name and the approximately 200 models in the listings are derived from the High Standard catalogs and price lists of the 1960s and 1970s. Additionally, there are more than 150 catalog numbers not listed that represent models with High Standard markings, but with special roll marking or other features which High Standard produced for several large distributors. A redesign of the shotgun line occurred with new models introduced in 1966. In 1973 High Standard introduced their new "Trophy Line" of shotguns and this marked a change in catalog numbers from the number beginning with the numeral 8 to the number beginning with the numeral 6. At this time the previous catalog numbers were referred to as the "Regular Line." Some Regular Line guns were catalogued in 1973 but this was the last year for them except the Police models. The 12 gauge pumps in the Trophy Line were guns which had interchangeable barrels. Serial numbers began appearing on the High Standard shotguns during mid to late 1967. Beginning about 1958 many of these shotguns had a two-letter date code. These private label guns are NOT listed in this data.

Additionally, there are more than 150 catalog numbers not listed here, which represent models with High Standard markings but with special roll markings or other features which High Standard produced for several large distributors. Many of these distributors specials had their own model names which included: Point Right, Pointer, Birdwing, NATO Pintail, Model 200 (J.C. Penney 12 gauge semi-auto), Sport Deluxe, and others still unknown. These distributor label guns are not listed in this data.

The choke markings used by High Standard are: * Full, ** Modified, *** Improved Cylinder, and **** Skeet Bore. Cylinder Bore has no mark.

SEMI-AUTOMATIC SHOTGUNS

Supermatic Field

Gas-operated semi-automatic shotgun. Blued finish, plain pistol-grip walnut stock and forearm. 4-round magazine capacity. Supermatic Field models were superceded by models in the Supermatic Deluxe group beginning in 1966. The 12 gauge guns have 2-3/4" chambers while the 20 gauge guns have 3" chambers.

Exc.	V.G.	Good	Fair	Poor
225	175	150	100	75

NOTE: Slight premium for 20 gauge.

Supermatic Special

Like the Supermatic Field except with 27" barrel with six-position click-stop adjustable choke. Supermatic Special models were superceded by models in the Supermatic Deluxe group beginning in 1966. The 12 gauge guns have 2-3/4" chambers

Exc.	V.G.	Good	Fair	Poor
225	180	150	100	75

Supermatic Deluxe

Gas-operated semi-automatic shotgun. Blued finish, Checkered pistol grip walnut stock and forearm. Four-round magazine capacity. The adjustable choke had 6 click-stop positions. Recoil pad beginning 1966. The 12 gauge guns have 2-3/4" chambers while the 20 gauge guns have 3" chambers.

Exc.	V.G.	Good	Fair	Poor
265	185	150	100	75

NOTE: Add $20 premium for vent rib versions.

Supermatic Citation

Same as Trophy except without ventilated rib. Six click-stop adjustable choke. Catalog number 8220 has a compensator integral with the adjustable choke. The 12 gauge guns have 2-3/4" chambers.

Exc.	V.G.	Good	Fair	Poor
240	195	160	100	75

Supermatic Trophy

Gas-operated semi-automatic shotgun. Blued finish, checkered walnut stock and forend. 4-round magazine capacity. Six click-stop adjustable choke. Catalog number 8230 has a compensator integral with the adjustable choke. The 12 gauge guns have 2-3/4" chambers while the 20 gauge guns have 3" chambers.

Exc.	V.G.	Good	Fair	Poor
250	200	165	100	75

Supermatic Duck

Gas-operated semi-automatic shotgun chambered for 3" magnum and suitable for all 2-3/4" shells. Blued finish. Checkered pistol-grip walnut stock and forearm. Magazine capacity: five 2-3/4" shells, four 3" shells. Recoil pad.

Exc.	V.G.	Good	Fair	Poor
285	195	145	100	75

NOTE: Add $20 premium for vent rib versions.

Supermatic Deer Gun

Like Supermatic Deluxe with rifle sight. Recoil pad. Receiver tapped for peep sight on catalog number 8246. The 12 gauge guns have 2-3/4" chambers.

Exc.	V.G.	Good	Fair	Poor

—	975	450	275	150

HILLIARD, D. H.

Cornish, New Hampshire

Under Hammer Pistol

A .34 caliber under hammer percussion pistol with varying barrel lengths. Blued with walnut grips. Active 1842 to 1877.

Exc.	V.G.	Good	Fair	Poor
—	—	850	375	200

HINO-KOMURA

Tokyo, Japan

A 7.65mm or 8mm Nambu semi-automatic pistol manufactured in limited quantities between 1905 and 1912. The operation of this pistol involves pulling the muzzle forward until the slide engages a catch on the trigger assembly. Pulling the trigger at this point allows the barrel to move back and engage the cartridge nose into the chamber. Squeezing the grip safety then allows the barrel to slam back into the fixed firing pin on the breechblock. Prospective purchasers are advised to secure a qualified appraisal prior to acquisition.
